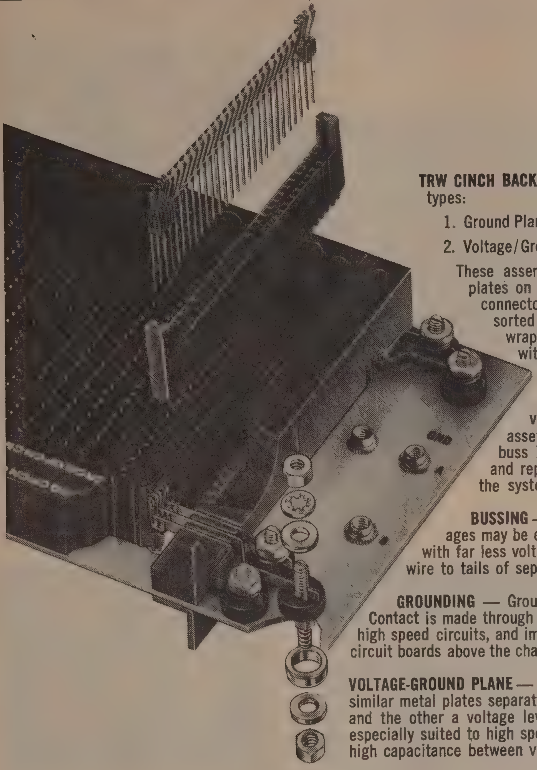
TRW® CINCH CONNECTORS



CREATIVE TECHNOLOGY IN BACK PLANE CONNECTOR SYSTEMS

TRW CINCH BACK PLANE CONNECTOR SYSTEMS are available in two general types:

1. Ground Plane Systems
2. Voltage/Ground Plane Systems

These assemblies consist, basically, of precision punched aluminum plates on which are mounted a series of printed circuit board edge connectors, solid copper buss bars, phenolic support bars, and assorted hardware. Contacts with square tails for automatic wire wrapping are assembled into rows of edge connector insulators with tails extending through the punched plate(s) for proper positioning.

VOLTAGE BUSS CONTACT — Specially designed Cinch voltage buss contacts are an integral part of each connector assembly. No soldering or welding is required in bussing. Both, buss bars and individual bussing contacts are easy to remove and replace. If necessary, without disturbing the remainder of the system.

BUSSING — With connectors mounted side by side, all common voltages may be easily bussed together. Solid copper buss bars carry circuits with far less voltage variation than is possible by the technique of wrapping wire to tails of separate contacts.

GROUNDING — Grounding is made directly to the aluminum ground plate. Contact is made through the ground bushing. The short distance to ground enhances high speed circuits, and improves shielding between wiring below chassis and plug-in circuit boards above the chassis.

VOLTAGE-GROUND PLANE — Structurally, the voltage-ground plane is a sandwich of two similar metal plates separated by a layer of insulation. One plate serves as the ground, and the other a voltage level. This system provides superior circuit stability, and is especially suited to high speed signal applications. It also provides low impedance and high capacitance between voltage and ground planes.

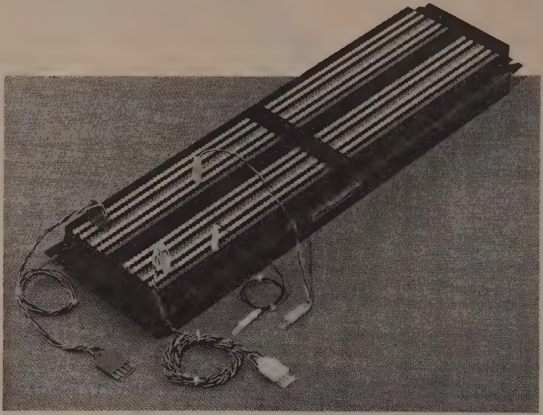
TRW® CINCH CONNECTORS

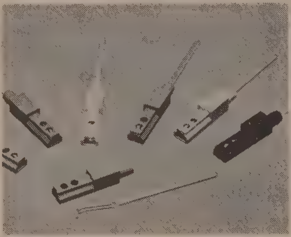
PATCHMASTER

CIRCUIT CONCENTRATION BAY SYSTEM

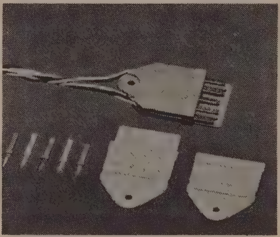
PATCHMASTER CCB—The heart of the new TRW Cinch Patchmaster system is a unique back panel and patch cord plugs. One side of the back panel is available for wire wrapping while the other side of the panel serves the same function as the solder side of the terminal block, but instead of soldering, interconnection is simply a matter of plugging in the patch cord.

The Cinch Patchmaster CCB Unit was originally designed to meet the stringent requirements of the telephone industry and to provide a product that offered the utmost in reliability with features that would make installation, service, usability and maintenance as simple and positive as possible. Patchmaster has a great many features that make it ideal for programming or interconnecting systems that require maximum flexibility.

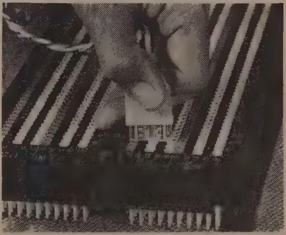




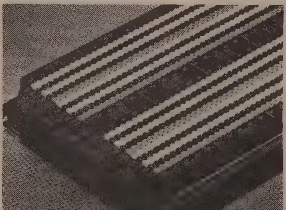
MODULES — The back panel consists of individual modules, press fitted into a 0.125-in. (3.18mm) thick anodized aluminum plate having formed sides. The module insulator material is a glass filled polyester in a variety of colors. The module contact is fabricated of phosphor bronze or copper nickel alloy and gold plated.



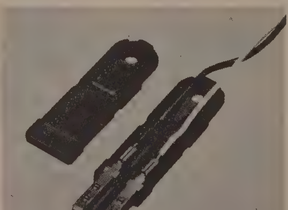
PATCH CORDS — The patch cord plugs consist of male pins assembled into a two piece insulator design with 24 or 26 gage wires either soldered or crimped to the pins. After the pins are assembled, the two insulator halves are ultrasonically bonded together. The plug insulator is polycarbonate and is available in a variety of colors. The plug pins are brass, gold plated.



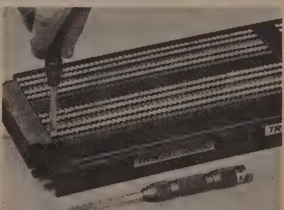
POLARIZATION — If the back panel and patch cord are designed without polarization, the patch cord plug could be assembled into the panel backwards, possibly causing serious circuit damages. The positive polarization of the Cinch Patchmaster plug assures correct insertion of the plug into the back panel.



RAISED MARKING — Those who install and service the CCB installation must be able to easily identify each circuit. In the Cinch Patchmaster system, all markings are on raised strips, putting circuit identification at the same level as the plug-in portion of the connector.



STRAIN RELIEF — Although a tool is provided to remove patch plugs from the back panel, on occasion it may become necessary to pull a plug out by the wires. If so, the plug has a built in strain relief that removes all strain from the interconnection of the wire to the pin.

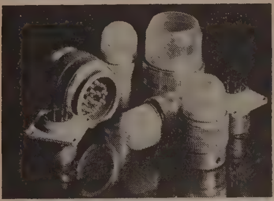


REPAIRABILITY — The complete module can be replaced if a contact is damaged. Easily operated tools are available for convenient repair and replacement of modules.

TRW/CINCH CONNECTORS, AN ELECTRONIC COMPONENTS DIV. OF TRW INC. / 1501 MORSE AVE. / ELK GROVE VILLAGE, ILL. 60007

TRW® CINCH CONNECTORS

CINCH NULINE 904 SERIES COMMERCIAL INPUT/OUTPUT CONNECTORS



FEATURES

Meets or exceeds appropriate MIL-C-5015 requirements for:

- Moisture resistance (when potted).
- Insulation resistance.
- Environmental resistance.
- Temperature cycling.

Additional features of the 904 Series:

- Lightweight.
- Visual engagement ring.
- Positive locking.
- Hooded female contacts.
- Three pin coupling.
- Stainless steel pins and bayonet slots.

PERFORMANCE CHARACTERISTICS

Durability: Connectors do not show any damage detrimental to the operation of the connector after 100 mating-unmating cycles at a rate of 300 cycles per hour.

Corrosion Resistance: After salt-spray testing per MIL-STD-202, Method 101C, Test Condition B connectors show no exposure of base metal which will affect performance.

Dielectric Withstanding Voltage: Connectors show no evidence of breakdown or flash over between adjacent contacts and from contacts to outer shell when subjected to the conditions specified in table below. (Tests performed per Method 3001 of MIL-STD-1344.)

	Condition*	Test V RMS	Recommended Working Voltage DC	Recommended Working Voltage AC
Sea Level	Unsealed Sealed	1500 2000	700 700	500 500
70,000 Ft.	Unsealed Sealed	375 1500	175 700	125 500

*(Unsealed) Refers to connectors with no provisions made for sealing front or rear areas.
(Sealed) Refers to connectors that are potted or pressurized in mounting, having front and rear areas sealed.

Insulation Resistance: Minimum insulation resistance of 5000 megohms between adjacent contacts and from contacts to outer shell when tested in accordance with MIL-STD-202, Method 302, Test Condition B.

Vibration: There are no circuit descontinuities longer than one microsecond when subjected to vibration testing in accordance with MIL-STD-1344, Method 2005, Test Condition III.

Physical Shock: Connectors are not damaged when subjected to 1500 G's for 0.5 milliseconds in each of three mutually perpendicular planes per MIL-STD-202, Method 213A, Test Condition F.

Temperature Cycling: Mated connectors perform satisfactorily after being subjected to temperature cycling from −55°C to +85°C per MIL-STD-202, Method 102A, Test Condition D.

Humidity: Connectors remain completely functional after being subjected to humidity testing per MIL-STD-202, Method 103B, Test Condition A.

Contact Resistance: Contact resistance through each mated contact pair doesn't exceed the requirements specified in the following table when tested in accordance with MIL-STD-1344, Method 3004.

Contact Mating End Size	Wire Size	Test Current (Amp)	Millivolt Drop (Max.) Initial	Millivolt Drop (Max.) After Corrosion
#20	20 22 24	7.5 5.0 3.0	55 45 45	65 55 55
#16	16 18 20	13.0 10.0 7.5	50 45 45	60 55 55

MATERIALS & FINISHES

Contacts: Copper Base Alloy Gold Plated per MIL-G-45204, Type II, Grade C, Class 0 over Nickel Underplate.

Shells: Aluminum Alloy 6262 per QQ-A-225/10 Gray Anodized per MIL-A-8625.

Inserts: Diallyl Phthalate per MIL-M-14F, Type MDG.

Face Seals: Neoprene Rubber per MIL-R-3065.

Bayonet Pins: Stainless Steel Type 303 Passivated.

Component Parts: Anodized Aluminum conforming to QQ-A-225 or Passivated Stainless Steel in accordance with QQ-S-764.

TRW® CINCH CONNECTORS

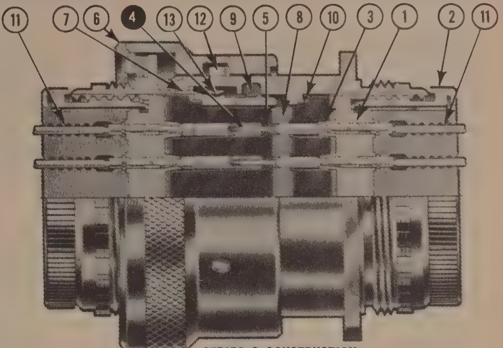
CINCH-NULINE ASTRO/348® MIL-C-81511 HIGH DENSITY CONNECTORS

DESIGN FEATURES

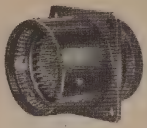
1. Molded One-Piece Contact Retention Disc.
2. Captivated Rear-Locking Nut (Metal to Metal Bottoming).
3. Individual Contact Risers.
4. Anti-Scoop Recessed Pin Contacts (in receptacle).
5. Closed Entry Socket Insert and Contacts.
6. Captivated Triple Bayonet Coupling System.
7. 5 Key Shell Polarization. (Series 2, Size 8 has 2 keys.)
8. Interfacial Mating Seal.
9. Dynamic "O" Ring Peripheral Shell Ring.
10. Monoblock Construction — Inserts Bonded to Shells.
11. Self-Sealing Rear Grommets.
12. Visual Mating Indicator.
13. Shell to Shell Grounding Fingers.



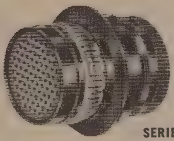
SERIES 2 CONSTRUCTION

Astro/348 has been designed to eliminate the costly space-wasters in removable contacts. Problem-causing metal retention clips for each contact are gone. Instead, a single one-piece molded dielectric retention system locks Poke-Home contacts in place. Designed as a high density subminiature, Astro/348 is the best high density miniature and standard connector ever made. It packs more contacts of every size into standard shells than any other design. MIL-C-81511* has established the standard connector family for the next decade.

The single-piece retention disc gives other excellent advantages in addition to density. Dielectric wall thicknesses in the subminiature #23-22 contact arrangements **are equal to standard miniatures.** With greater density, #20's, #16's and #12's provide dielectric separation comparable to standard miniature and power connectors.



SERIES 2



SERIES 1

GROUNDING FINGERS

Shell-to-shell grounding is established by beryllium spring fingers permanently fixed to the Series 2 receptacle shell and permanently fixed to the Series 1 plug shell. These spring fingers, spaced at a minimum of 6 per inch (except at key-ways in Series 2 construction), make contact at least .090″ before pin-socket electrical engagement occurs during mating and maintain contact at least .090″ after pin-socket disengagement during unmating.

---

*MIL-C-81511 is a Military Specification for Connectors, Electric, Circular, High Density, Quick Disconnect, Environment Resistant.

**Astro/348 and Poke-Home are Trade Marks of the Bunker-Ramo Corp.

TRW® CINCH CONNECTORS

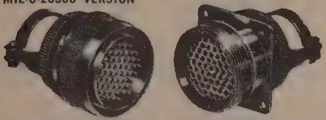
CINCH-NULINE "OMEGA" SERIES — HIGH EFFICIENCY CIRCULAR CONNECTORS

MIL-C-26500 VERSION

HERMETICALLY SEALED RECEPTACLE



MIL-C-38300 VERSION OR "GOLDEN OMEGA"

MORE CONTACTS IN LESS SPACE

When it becomes necessary to provide connections for a large number of circuits in a limited amount of space, a CINCH-NULINE "Omega" Series High Environmental Circular Connector is your best choice. CINCH-NULINE offers a wide selection of these miniature connectors that meet and exceed the requirements of MIL-C-26500 and MIL-C-38300. They are available in a variety of constructions, including those which can be potted or are hermetically sealed. Most connectors feature MIL-C-26636 Crim-Lok contacts. Many others are available also with coaxial, shielded or thermocouple contacts.

SIGNIFICANT ADVANCE IN STATE-OF-THE-ART

On the ground or in space, wherever there is a requirement for superior environmental protection, high reliability and minimum weight and bulk, CINCH-NULINE "Omega" Series Connectors are the answer. To produce this series requires the satisfaction of many exacting requirements on reliability, logistics and present and anticipated environmental conditions. To meet these requirements, it was necessary to develop advanced design concepts, formulate materials for specific connector usage and work out new production techniques. The resulting connectors exceed the stringent requirements of MIL-C-26500 (USAF) and MIL-C-38300 (USAF) for performance and reliability.

THE "GOLDEN OMEGA" — CLOSED ENTRY & FRONT SERVICING

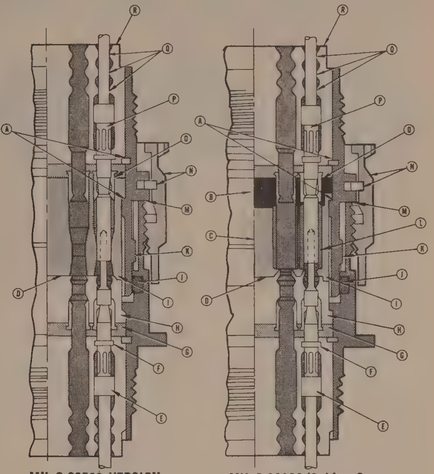
"Golden Omega" Connectors are identical to the other connectors in the "Omega" Series, except the socket inserts have a hard face of glass-filled epoxy. They are the first connectors to combine the positive reliability of closed entry with the speed and convenience of front servicing. In addition, the MIL-C-26636 contacts are tamper proof. Wrong-size contacts or oversize test prods cannot be inserted in the hard dielectric contact entry-ways on the socket inserts.

COMPLETE ENVIRONMENTAL SEALING

CINCH-NULINE "Omega" Series Connectors are fully sealed against extreme environmental conditions. Silicone rubber dielectric provides resilience and unsurpassed resistance to tear, compression set, fluids and high temperatures.

When the connectors are mated, insert faces compress to form a resilient dielectric seal around each individual contact. A continuous barrier on the periphery of the socket insert mates with a recess around the pin insert to form an additional compression seal. A dynamic "O" ring seal between mated shells constitutes still another barrier to dirt and moisture, and protects the integrity of the face seals. Together with monoblock construction, this puts void-free, continuous dielectric around each contact through the entire connector length.

Monoblock construction, with bonded interfaces between the dielectric components (insert, anti-deflection disc, and grommet) eliminates air voids and protects connectors from degrading moisture and altitude conditions. A pressurizing seal around each contact at the major O.D. prevents the passage of air or moisture through the contact hole, and triple sealing riser design at each wire hole in the grommet seals each individual wire.



MIL-C-26500 VERSION

MIL-C-38300/Golden Omega

A. Positive Location Captivated Insert (Mechanical Interlock)
B. Resilient Rear Insert (Only on MIL-C-38300 Version)
C. Closed Entry Hard Dielectric Front Insert (Only on MIL-C-38300 Version)
D. Insert Static Face Seal
E. Pin Contact, MIL-C-26636
F. Contact Pressurizing Seal
G. Anti-Deflection Disc
H. Resilient Pin Insert
I. Insert Rim Seal
J. Dynamic "O" Ring Shell Seal
K. Five Key Shell Polarization
L. Releasing Sleeve
M. Metal to Metal Shoulder
N. Bayonet or Threaded Coupling, Permanent Captivation
O. Contact Retention Clip
P. Socket Contact, MIL-C-26636
Q. Wire Sealing Risers
R. Grommet

WIDE VARIETY OF CONFIGURATIONS

Detailed information on configurations available, shell sizes, dimensions and data on how to order are given on the following pages.

GO/NO-GO RELIABILITY

When a "Golden Omega" connector is mated, you can be sure there is proper contact. The socket contacts are closely surrounded by hard dielectric with a chamfered entry to guide in the pins accurately. However, if the pins are bent, the hard dielectric presents a closed entry and prevents mating.

LIGHTWEIGHT & HIGH CONTACT DENSITY

Connector shells are impact-extruded aluminum forgings with a high strength-to-weight ratio. The insert arrangement is designed for the maximum number of contacts within the area available.

CRIM-LOK CONTACTS

Crim-Lok contacts (front release, rear insertable) provide for easy servicing of connector circuits without disassembling the connector from its mounting, or disturbing adjacent contacts. MIL-C-26636 contacts are crimped quickly, consistently, and reliably with either hand or power tools. They have high electrical conductivity, present a smooth configuration, and completely protect electrical contact pressure-members from environmental and handling damage. The contacts come in sizes 20, 16, 12, and shielded coaxial, with rhodium-over-silver plating. (Other platings such as gold are available; write factory for details.)

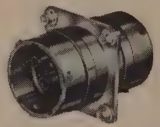
48-7005 HERMETICALLY SEALED RECEPTACLE

- Hermetically sealed, feed-through connector.
- Has two #16 pin contacts, one shielded socket contact.
- Has bayonet coupling, mates with 48-16R14-3S or 48-16R14-2/1S.
- Offers all features of MIL-C-26500B(USAF) including continuous operation at 200°C; metal-to-metal bottoming of mated shells; interfacial insert seal, insert rim seal, and dynamic O ring between shells; visual full engagement indicators for mating; and five polarizing keys in alternate positions to prevent mismating.



HOW TO ORDER

To get the specific "Omega" Series Connector you want, put together the part number as per the following typical example. (Remember, of course, that only the inserts shown on Page 2•1026 are available.)

MIL. STANDARD PART NUMBERS

You can use MS as well as CINCH-NULINE part numbers in ordering "Omega" Series Connectors. The MS part numbers for MIL-C-26500 Connectors are worked out on the basis shown in the table below. Whether you order by the MS or the "Omega" Series Number, all qualified connectors are shipped with the MS marking.

The part numbers for MIL-C-38300 Connectors start off with the identification M38300/ and take the form M38300/XXXX-XX. To determine the specific M numbers, refer to military specifications MIL-C-38300.

¶Hermetics are available in receptacle Shell Style "X3" (MS24265) and "X5" (MS27034).
*MIL-C-38300 Connectors are furnished without cable clamp. If a cable support is desired, it must be ordered separately.

TRW® CINCH CONNECTORS

CINCH-NULINE "OMEGA" SERIES

CRIM-LOK CONTACTS & SEALING PLUGS

MIL-C-26636 CONTACTS

When you order "Omega" Series Connectors with contacts, the contact package contains an extra 10% spares (or at least 3 extra contacts). The package also includes 15% as many sealing plugs as contacts (or at least 5 sealing plugs).
To order contacts and sealing plugs separately use the part numbers in the table at right. (The contacts, of course, are MIL-C-26636 contacts.) Contacts may also be ordered in reels for use with automatic crimping tools.

CONTACTS

When you order connectors with contacts, the contact package contains enough contacts to complete the insert arrangement and have 2 spares left. The package also includes enough sealing plugs for at least 15% of the contacts in the insert, in any case a minimum of 3 sealing plugs. To provide proper sealing, insert unwired contacts and sealing plugs in all unused holes. (Use a #12 contact for a #1 shielded hole.) To order contacts and sealing plugs separately use the part numbers in the table at right. Contacts may also be ordered in reels for use with automatic crimping tools.

- **The convenience of bayonet coupling.**
- **The rigidity of screw type coupling**

Severe vibration, such as that which occasionally occurs in airborne equipment, can cause a high rate of early failure in connectors. This is especially true of the bayonet type of coupling connectors. To overcome this problem, aircraft manufacturers put out a call for connector manufacturers to design a more vibration-proof model, within definite limits.

Realizing that a new type of connector could cost more per unit than the failure-prone type, the aircraft companies stipulated that the increased costs should be justified by reduced maintenance cost and lower air traffic revenue losses caused by excessive downtime. Also, to prevent a complete re-engineering of the present connection systems used in airplanes, the new design would have to:

1. Mate with the standard MIL-C-26500 and MIL-C-83723 bayonet receptacle presently used on the aircraft.
2. Use standard contacts.
3. Use standard crimping, insertion and removal tools.
4. Withstand vibration and shock equivalent to the capability of thread-coupled connectors locked up metal-to-metal.

To meet the challenging conditions imposed by the aircraft manufacturers, TRW/Cinch NuLine engineers decided to approach the development of a new design based on an analysis of the failure-modes of the present connector system.

Critical analysis of the connector needing improvement revealed that a vibration envelope induced forces on the connector that resulted in a wear producing relative motion between the plug and its mating receptacle.

Further analysis of the connector design disclosed that the "relative motion" was due to the unloading effect on the clamping force when the bayonet dropped into its detent in the coupling ring ramp.

TRW® CINCH CONNECTORS

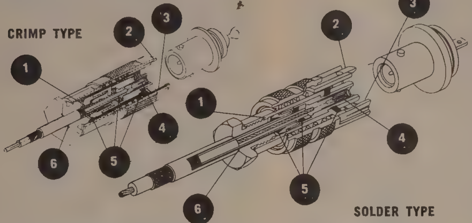
CINCH-NULINE NU-LOK 1200 SERIES CONNECTORS

HOW NU-LOK 1200 SERIES CRIMP & SOLDER TYPE ELECTRICAL CONNECTORS ELIMINATE THE WEAK LINKS



1 Solid, single-piece shell assures continuity of shielding circuit and eliminates intermittents. Crown contacts provide many independent points of contact.

2 Exclusive Nu-Lok bayonet locking mechanism assures positive locking of mating connectors.

3 Solid, one-piece, metal cable clamp distributes clamping stress uniformly over large area. Tightening back end nut causes beveled edge of cable clamp to cut through chevron seal, providing metal-to-metal locking of shielding to shell.

4 Closed entry socket contact prevents spreading and weakening tines due to insertion of oversize objects. Constructed of heat treated beryllium copper for ruggedness and gold plated to provide maximum electrical conductivity.

5 Maximum environmental protection provided by three moisture seals applied on non-distorted dielectrics. Nu-Lok exclusive locking mechanism assures rigid coupling of connectors and maintains front end gasket uniformly compressed at all times to exclude moisture.

6 Large radius eliminates sharp edge on back end nut, allowing maximum flexing of cable without rupturing insulation or conductors.

FAILURE-PROOF DESIGN & CONSTRUCTION

Cinch-Nuline 1200 Series Nu-Lok Connectors are miniature environment-resistant coaxial connectors designed to fully meet all requirements of Military Specification MIL-C-25516. They are available in either solder pot or crimp contact designs to accommodate conductor sizes 18 AWG or smaller, either coaxial or unshielded single conductor types. The crimp version also provides crimp termination for the cable braid.

All 1200 Series Cable Connectors are of environment-resistant construction. Bulkhead-mounted connectors are offered in conventional pressure sealed construction or true hermetic seal design with fused glass to metal seals. Hermetically sealed units are individually tested to ensure leakage of less than 1×10^{-5} cc/second of Helium at a pressure differential of one atmosphere. All units are designed for greatest ease of installation and maintenance with commonly available tools.

Center contacts of the 1200 Series Connectors are of "captive contact" design to provide electrical continuity that is completely independent of cable stability. Each center contact, both pin and socket types, is double-plated with gold over nickel. Socket contacts are chamfered to facilitate entrance of the mating contact and to minimize the possibility of contact damage during insertion or separation.

1200 Series Nu-Lok Connectors are highly corrosion-resistant. Both metallic and non-metallic connector components are resistant to hydrocarbon fuels and lubricants and sea water.

PERFORMANCE CHARACTERISTICS

ELECTRICAL

TEST	PERFORMANCE
1 Insulation Resistance (Ambient)	The insulation resistance between center contact and outer contact exceeds 5000 megohms. Between outer contact and shell, the resistance exceeds 1000 megohms.
2 Dielectric Withstanding Voltage (Sea Level)	Connectors will withstand 1500 V RMS without evidence of breakdown or leakage in excess of 0.3 ma, either mated or unmated.
3 Dielectric Withstanding Voltage (Altitude)	Mated connectors withstand 750V RMS without evidence of breakdown or leakage in excess of 0.3 ma. Unmated connectors withstand 125V RMS without breakdown or leakage in excess of 0.3 ma.
4 Contact Resistance	Center contacts in hermetic connectors do not exceed 0.4 mv at 10 ma. Other types do not exceed 0.2 mv. When tested at 7.5 amps the center contacts do not exceed 12.0 mv. Resistance for outer contacts is ¼ or less than above values.
5 Shield Clamp Resistance	The junction resistance for connectors assembled on typical 200°C cable is 10 milliohms max.
6 Impedance	Basic connector plugs and receptacles exhibit an impedance of 50 ±2 ohms.
7 Voltage Standing Wave Ratio	The VSWR of basic plugs and receptacles does not exceed 1.15:1 at frequencies up to 1 GHz.

PHYSICAL

TEST	PERFORMANCE
1 Contact Engaging & Separating Forces	The force required to engage and separate the steel test pin is within the minimum limit of 2 ozs. and the maximum limit of 12 oz.
2 Resistance to Test Probe Damage	Engagement and Separation forces for socket contact remains within the limits following the application of the weighted probe. In addition the socket will reject an oversize (0.044) pin.
3 Contact Retention	Axial displacement does not exceed 0.010" under a 10 lb. retention load.
4 Connector Endurance	There are no detrimental effects on physical or electrical performance as a result of endurance cycling.
5 Cable Retention Force	Connectors maintain electrical continuity under a 30 lb. retention load. There are no detrimental effects on physical or electrical performance as a result of the retention load. For connector assemblies using cable with a tensile strength of 33 lbs. or less, the retention load is 90% of the cable strength.

PHYSICAL (Cont'd)

TEST	PERFORMANCE
6 Side Load	Mated cabled and mounted jacks withstand a side load of 30 lbs. without detrimental effects to physical or electrical performance. Uncabled adaptors withstand 25 lbs.
7 Hermetic Seal	The leak rate of hermetic sealed connectors does not exceed 1×10^{-5} cc/second of helium.
8 Altitude Humidity (Leak Integrity)	Hermetic sealed connectors show no evidence of fluid leakage as a result of, or during 10 cycles of pressure cycling at room temperature and −54°C. The 5 lb. tensile load causes no leakage of fluid.
9 Shock	The connectors maintain electrical and leak integrity as well as remain fully operational following the test. Circuit continuity remains intact with no interruptions greater than 10 microsec.
10 Vibration	The connectors maintain electrical and seal integrity as well as remain fully operational following the test. Circuit continuity remains intact with no interruptions greater than 10 microsec.
11 Sulphide Immersion	Visual examinations indicate no detrimental effects to the plating on functional surfaces.

ENVIRONMENTAL

TEST	PERFORMANCE
1 Thermal Shock	The connectors maintain electrical and leak integrity as well as remain fully operational following the thermal shock.
2 High Temperature	The insulation resistance values remain above 1000 megohms for center contact to outer contact measurements. Outer insulators for triaxial connectors remain above 400 megohms. Contact resistance values remain below 23 millivolts at 7.5 amps and 0.8 millivolts at 10 milliamps.
3 Fluid Immersion	The connectors maintain electrical integrity and remain operational following the fluid immersion. There is no detrimental change in connector piece parts as a result of immersion in the specified fluids.
4 Altitude Humidity (Electrical Integrity)	The insulation resistance remains above 200 megohms through 10 altitude humidity cycles.
5 Ozone	The ozone exposure cause no detrimental effects to the connector.
6 Corrosion Resistance	Connectors and contacts maintain electrical integrity and remain operational following the salt spray exposure. No detrimental exposure of base metal is experienced.

TI's GOLDEN RULE: NO GOLD ADDERS.

A lot of manufacturers give you a little something extra when they sell you gold sockets.

It's called a gold adder. And it can cost you a lot of extra money.

Not so with TI.

TI has a policy of no gold adder. So when you order low profile solder tail sockets from us, the price we quote is the price you pay.

No matter what the cost of gold.

That's what you **don't** get from TI. Here's what you **do** get.

- 100 microinch wrought gold contact surfaces for maximum reliability, serviceability, and longevity.
- Universal mounting and packaging.
- Stand-off tabs on the base for solder flush.
- Redundant contact points for low contact resistance, high reliability, and repetitive insertion.
- An anti-wicking wafer for better wave soldering.
- And a price that even competes with many tin-plated sockets.

We have a whole family of gold, low profile DIP sockets to choose from—all the way from 8 pins to 40 pins.

But if gold is a little rich for your needs, we offer an identical family of sockets with a tough 200-400 microinch plating of tin.

For literature, write Texas Instruments, Mail Station 10-5, Attleboro, Mass. 02703. For the name of your nearest distributor, or for information on our custom connectors, call Connector Systems Marketing,
(617) 222-2800,
Ext. 268 or 7216.

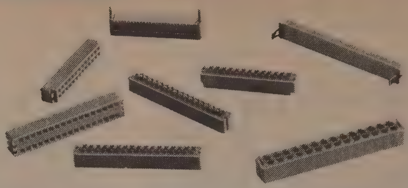
Scotchflex® BRAND SOCKET CONNECTORS



INTRODUCTION

SCOTCHFLEX brand socket connectors are available in a variety of sizes and center spacings to fit standard, commercially available wrap panels and custom configurations. Socket connectors may be used in conjunction with SCOTCHFLEX headers, where quick disconnect/reconnect capability is required. Optional strain relief clips are available for all SCOTCHFLEX socket connectors, should design needs require them.

As you will note, all U.S. dimensions are followed with the respective corresponding metric dimensions, which are in parentheses.

*Available Mid-1975.

Note: 3466-1001 and 3466-2001, 24 position solder tail headers are available when using .032"-.047" (0.81 mm-1.19 mm) printed circuit boards.

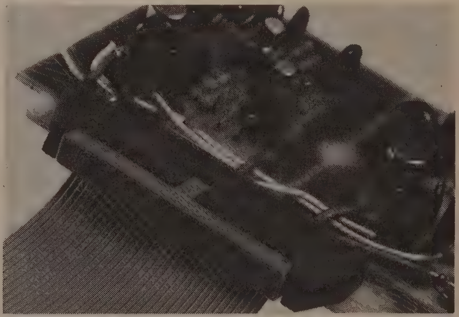
TYPICAL PROPERTIES	
PHYSICAL	
Body Material	Glass reinforced polyester; UL flammability rating 94V-O
Color	Gray
Contact Metal	Phosphor bronze
Contact Plating	0.000030" (.762 μm) min. Gold per Mil-G-45204 Type II over 0.000050" (1.27 μm) Nickel
Marking	Raised figures; 3M and part identification number and orientation triangle
ELECTRICAL	
Current Rating	1 AMP
Dielectric Withstand Voltage	>500 Volts at Sea Level
Insulation Resistance	>5 x 10^6 Ohms
ENVIRONMENTAL	
Temp Range	-67°F to +221°F (-55°C to +105°C)

DIMENSIONS	
U.S.	Inches
Metric	(mm)

Where additional header to board mounting is required, use the following screws with indicated header types.

P.C. Board Thickness	Right Angle Contact	Straight Contact
.032 - .062 (0.81 - 1.57)	2-56 x 3/8"	3M Part No. 3458 (4-40 x 1/4" Type F)
.063 - .125 (1.60 - 3.18)	2-56 x 1/2"	3M Part No. 3472 (4-40 x 5/16" Type F)

When ordering 3M Brand Headers, use complete 8 digit part - suffix number (i.e., 3428-1002).



Contact your 3M Scotchflex sales representative, or the authorized 3M Scotchflex distributor in your area for pricing, availability, and design assistance.

Scotchflex® BRAND P.C.B. CONNECTORS

INTRODUCTION

Flat cable may be terminated at the circuit card by hand or flow solderable SCOTCHFLEX connectors. The contacts which are positioned in the connector body are soldered to the board as a unit. The flat cable terminates in the connector to the "U" form end of the contacts. As with other SCOTCHFLEX connectors, no stripping or soldering of conductors is required. SCOTCHFLEX P.C.B. Connectors come in a variety of configurations to mate with SCOTCHFLEX flat cable.

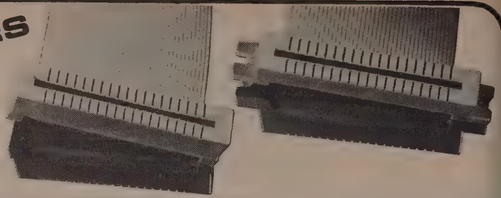
Scotchflex BRAND CARD-EDGE CONNECTORS



INTRODUCTION

Dual readout SCOTCHFLEX Card-Edge Connectors are available with or without mounting ears.

Both versions have bifurcated, gold-plated beryllium copper contacts insuring dependable electrical interface through repeated insertions and withdrawals. Insulation piercing "U" contacts are on .100" (2.54 mm) spacings, designed to accept SCOTCHFLEX round conductor cables on .050" (1.27 mm) centers. As with other SCOTCHFLEX connectors, 3M's card-edge connector line features labor cost savings, since up to 50 terminations can be made in a single step.

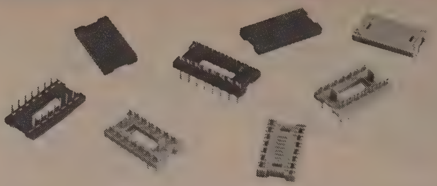
Scotchflex BRAND D.I.P. CONNECTORS



INTRODUCTION

Solderless connections with 14, 16 and 24 pin dual in-line plugs, which mate with standard I.C. sockets and high density D.I.P. panels, are now possible using Scotchflex Brand connectors. Offering interboard bussing capabilities, Scotchflex Brand D.I.P. connectors are designed to conserve space on the P.C. board. Fast, economical terminations using either flat cable or discrete wires make Scotchflex D.I.P. connectors an ideal choice.

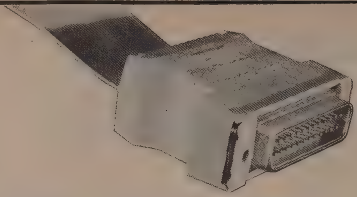
Scotchflex® BRAND DELTA CONNECTOR SYSTEM



INTRODUCTION

The revolutionary SCOTCHFLEX Delta Connector System is similar in configuration and compatible with other "D" subminiature connectors existing in the industry. It offers the first connector of its kind where it is not necessary to strip, solder, crimp and individually position discrete wires into the connector body. This connector offers simultaneous insulation stripping and terminating using the proven "U" contact principle of connecting a unique SCOTCHFLEX flat cable or individual insulated conductors to the connector. A SCOTCHFLEX brand cable, made especially for the SCOTCHFLEX Delta Connector System, with conductors alternating from .050" (1.27 mm) to .054" (1.37 mm) every 9.5" (24.13 cm) is specifically designed to provide instant interfacings of equipment based on two standard center spacings. Maximum versatility is achieved, for it is possible to connect a SCOTCHFLEX Delta Connector to other existing lines of SCOTCHFLEX connectors (i.e., Socket, P.C.B., D.I.P. and Card-Edge). Customer requirements for implementing the SCOTCHFLEX Delta Connector System are met through the complete line of accessory components.

TYPICAL PROPERTIES OF THE SCOTCHFLEX DELTA CONNECTOR 3M PART NOS. 3482-1000 & 3483-1000

No. of Contacts	3M Part No.	Description
25	3482-1000	pin version
25	3483-1000	socket version

PHYSICAL
Contact housing—Glass reinforced polyester; U.L. Flammability rating 94V-O, encased in chromate plated steel shell
Color—Gray
Contact material—Beryllium copper
Contact plating—.000050" (1.27 μm) gold per MIL-G-45204 over .000050" (1.27 μm) electroless nickel
Marking—Raised figures; 3M and part identification numbers, contact position numbers
Wire accommodation—26 AWG solid
ELECTRICAL
Current rating—1 AMP
Insulation resistance—5 x 10^6 ohms minimum
Dielectric strength— >500 volts (sea level)
ENVIRONMENTAL
Temperature rating— -67°F to +221°F (-55°C to +105°C)

Scotchflex® BRAND FLAT CABLES

ROUND CONDUCTOR FLAT CABLE

The 3M Company supplies 6 standard round conductor flat cables. They come in wire sizes #30 AWG Solid, #28 AWG Stranded, #26 AWG Solid and #24 Stranded with up to 50 conductor widths. Depending on the particular cable, there are three center spacings to choose from — .050", .0625" and .075". Being zippable, breakouts can be made when more than one connector is required on an end. With this wide selection, 3M has the right cable to meet your needs.

FLAT CABLES WITH GROUND PLANE

In applications where it is especially critical to control or lower cross-talk or inductive coupling, 3M Company offers a #30 AWG solid and #28 AWG stranded flat cable with a copper mesh ground plane embedded in the insulation parallel with the conductors. In addition, a #28 AWG stranded flat cable comes with a drain wire in contact with the ground plane. All these cables have a .050" wire center spacing and are designed to mate with SCOTCHFLEX connectors.

TEST METHODS

Impedance, capacitance, and inductance are measured GROUND — SIGNAL —GROUND on round conductor flat cables.

Ground Plane cables are measured CONDUCTOR to GROUND PLANE.

CAPACITANCE & INDUCTANCE
Direct reading reactance meter to measure small reactances at a frequency between 125 KHz and 140 KHz. With cable in copper guard tube and a guard voltage applied to copper tube and two adjacent wires.

IMPEDANCE
TDR. Far end of cable open circuit. Sample length 10 feet (3 m).

PROPAGATION DELAY
TDR. Sample length 10 feet (3 m). Far end short circuit.

CROSSTALK — Minimum sample length 10'(3 m).6 ns rise time; 1 MHz repetition rate, 2 to 5 volts pulse amplitude, 10 ns pulse width, sample terminated in Z_0.

For test values on crosstalk, or full description of test methods, consult your local 3M SCOTCHFLEX representative or the SCOTCHFLEX distributor in your area.

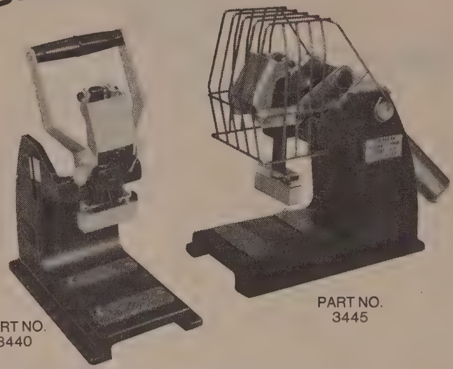
Scotchflex® BRAND ACCESSORIES



PART NO. 3440

PART NO. 3445

3M SUPPLIES EVERYTHING NEEDED TO IMPLEMENT THE Scotchflex BRAND SYSTEM

The SCOTCHFLEX assembly press is a parallel action device designed specifically for use with SCOTCHFLEX connectors. The proper amount of force is applied to connector components to pierce cable insulation and insure a tight interference fit between connector body and cover. Over center handle action reduces operator fatigue. Positive-stop design insures proper assembly pressure with each connection.

Both hand and pneumatically operated presses are available. These presses are die cast for strength and rigidity, and may be bench mounted, or easily moved from position to position. Special fixtures may also be used with the press to meet the requirements of unique SCOTCHFLEX applications.

With these assembly presses come an assortment of hex wrenches, a pressure platen, 3M Part No. 3442-1, and a shut height gauge block, 3M Part No. 3436-1, for making adjustment settings to insure proper termination of 3M cables and connectors.

SPECIFICATIONS

Part No.	3440	3445
Height	7½ ins. (19.05 cm)	10 ins. (25.4 cm)
Width	5¼ ins. (13.34 cm)	5¼ ins. (13.34 cm)
Depth	9½ ins. (24.13 cm)	9½ ins. (24.13 cm)
Weight	7 lbs. (30.8 N)	8 lbs. (35.2 N)
Line Pressure Required	65-125 lbs./sq. in.	

Model 3445 does not include air filtration, air pressure regulation, or actuation control equipment.

Connector locator plates are not included with press.

REPLACEMENT PARTS KIT

3M PART NO. 3455

2 small nylon bushings	2 10-32 machine screws
2 small nylon washers	2 10-32 nuts
2 large nylon bushings	2 ¼ x 20 nuts
2 large nylon washers

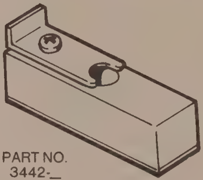
PLATENS



PART NO. 3442-_

PLATEN GUIDE

3M Part No.	Description
3442-1	(Standard platen shipped with all assembly presses.) For assembly of all SCOTCHFLEX Connectors, except 3378, 3460, 3461, 3462, 3463, and 3464.
3442-2	For assembly of 3378 P.C.B. Connector.
3442-3	For assembly of 3463 Card-Edge Connector.
3442-4	For assembly of 3461 Card-Edge Connector.
3442-6	For assembly of 3460 D.I.P. Connector.
3442-7	For assembly of 3462 Card-Edge Connector.
3442-8	For assembly of 3464 Card-Edge Connector.

LOCATOR PLATE GUIDE

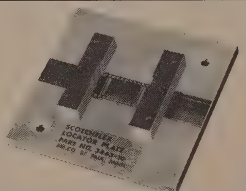
	P.C.B. CONNECTORS
3443-8	For assembly after soldering of all versions of: 3474, 3422, 3434, 3402, 3378, 3418, 3426, 3468, and 3470.
3443-15	For assembly before soldering of all versions of: 3474, 3402, 3434, and 3426.
3443-16	For assembly before soldering of all versions of: 3418 and 3422.
3443-19	For assembly before soldering of all versions of: 3378.
*3443-33	For assembly before soldering of 3468.
*3443-34	For assembly before soldering of 3470.

LOCATOR PLATE



PART NO. 3443-__

An assortment of locator plates are available from 3M Company for making the proper connection of SCOTCHFLEX cables to connectors.

	D.I.P. CONNECTORS
3443-10	All versions of 3460.
3443-12	All versions of 3406.
3443-13	All versions of 3416.
	CARD-EDGE CONNECTORS
3443-11	All versions of: 3461, 3462, 3463, 3464, and 3415.
	DISCRETE COMPONENT CONNECTOR
3443-35	3447-0000

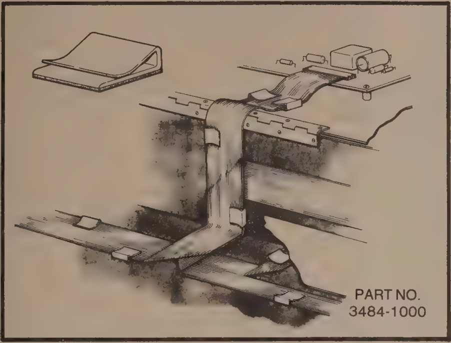
*Available Mid-1975

While the above data was correct at the time of publication, it is recommended that for specification purposes a current Spec Data Sheet on the particular connector be requested. These sheets contain full dimensional details and are available from the Scotchflex sales representative in your area.

Scotchflex® BRAND ACCESSORIES

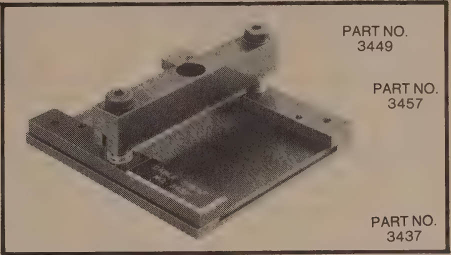
3M SUPPLIES EVERYTHING NEEDED TO IMPLEMENT THE Scotchflex BRAND SYSTEM

CABLE CLAMP



3M Company offers a cable clamp, part no. 3484-1000 to organize and simplify cable routing.

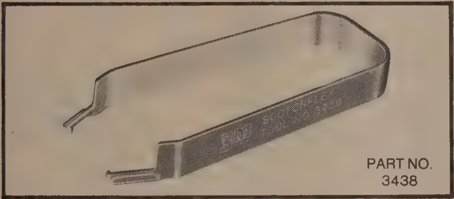
CABLE SHEAR



A precision cable shear, 3M Part No. 3437, is available for use with the assembly press, enabling the user to trim cable ends squarely and quickly.

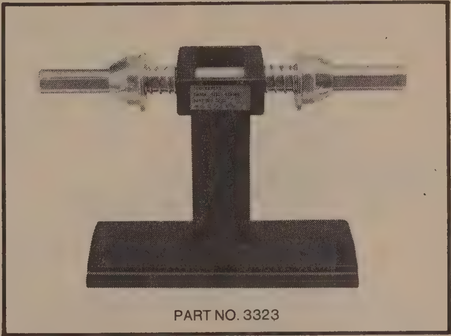
A replaceable cutting board, 3M Part No. 3457, and replacement cutting blades, 3M Part No. 3449, are available for order if needed.

EXTRACTOR TOOL



3M Company supplies a connector extractor tool, part no. 3438, for removing Scotchflex socket connectors from their mating posts.

CABLE REEL STAND



The No. 3323, cable reel stand, provides convenient storing and dispensing of Scotchflex brand cables.

HEADER MOUNTING SCREWS

Where additional header to board mounting is required, use the following screws with the indicated header types.

P.C. Board Thickness	Right Angle Contact	Straight Contact
.062″ (1.57 mm)	2-56 x 3/8″	3M Part No. 3458 (4-40 x 1/4″ Type F)
.063″ - .125″ (1.67 mm - 3.18 mm)	2-56 x 1/2″	3M Part No. 3472 (4-40 x 5/16″ Type F)

CABLE REEL STAND SPECIFICATIONS

HEIGHT	9″ (22.9 cm)
WIDTH	15″ (38.1 cm)
DEPTH	5″ (12.7 cm)
WEIGHT	10 lbs. 10 oz. (46.75N)
MATERIAL	Cast Aluminum
FINISH	Black Enamel
SHAFT	Steel, 1″ (2.54 cm) dia.
MAXIMUM CABLE WIDTH	3½″ (8.89 cm) per side of pedestal
MAXIMUM REEL DIAMETER	14″ (35.6 cm)
MOUNTING CENTERS	4.5″ (11.4 cm) x 10″ (25.4 cm)

VACO®

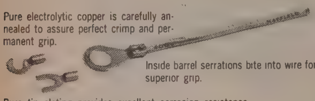
Solderless Connectors

UNCONDITIONALLY GUARANTEED

for quick, positive terminations or connections of wire . . . solid or stranded

Vaco Terminals and Connectors are produced from the finest materials to give you unequalled accuracy at the lowest possible cost. Ample use of materials means that the current carrying capacity of the devices exceeds that of the wire size they are designed to accept. Uniform, positive connections are made every time with no special skill required.

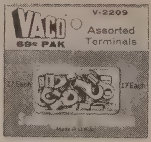
Your choice of insulated or non-insulated styles.



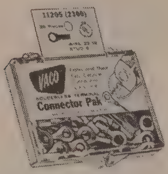
Pure electrolytic copper is carefully annealed to assure perfect crimp and permanent grip.
Inside barrel serrations bite into wire for superior grip.

Pure tin plating provides excellent corrosion resistance and electrical conductivity.

PACKAGED 4 CONVENIENT WAYS



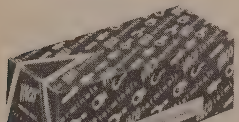
The Vaco "V" Pak is a self closing bubble pak card for the small quantity user. Available in 26 popular sizes and two assortment paks. Standard package 5.



The Vaco "D" Pak holds larger quantity in plastic box for on-the-job use. Standard package 5 per shelf carton.

VACO
Solderless Terminals
11205 (2300)

The Vaco "C Pak" features Mod-Pak packaging. Contains 100 Terminals in individual plastic bags to the box . . . 5 boxes (500 pieces) to master carton.



The Vaco "MB" Pak features Mod-Pak packaging for the largest user. Contains 10 Mod-Paks of 100 Terminals each to the carton.

TERMINAL KITS

No. 2195-63

No. 2195-63 Service Kit. Kit contains 10 different types of popular electrical, radio and TV single-grip terminals and No. 1963 crimping tool. Terminals included are: 11205, 11206, 11210, 11305, 11306, 11310, 14206, 13306, 13310, 15208.

No. 3185-63

No. 3185-63 Service Kit. Especially designed for the appliance, automotive and electrical equipment service man. Contains varied assortment of popular quick connect terminals and adapters plus No. 1963 crimping tool. Terminals included are: 18301, 18302, 18303, 18304, 18001, 18002, 18008, 18007, 19301, 19302.

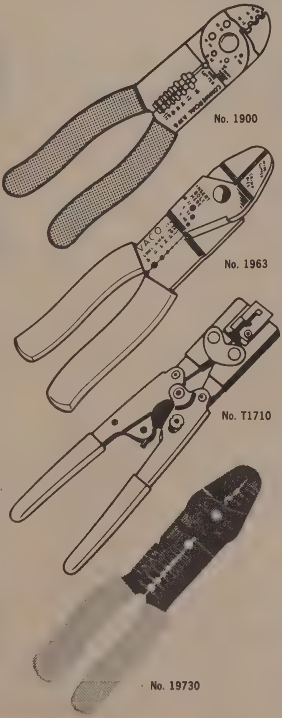
No. 6175-63

No. 6175-63 Service Kit. Kit contains 10 different types of popular insulated single-grip terminals for electrical, radio and TV plus No. 1963 crimping tool. Terminals included are: 51205, 51206, 51210, 51305, 53206, 53306, 53310, 51306, 51310, 54206.

No. 5000-63 Non-Insulated "Cash Register" Assortment. Heavy steel box contains 20 compartmented sections each with supply of 50 single-grip, non-insulated terminals (1000 in all). Complete with identification card in cover for easy selection of any terminal. Size: 13-1/4"x9-1/4"x2".

No. 4900-63 Insulated "Cash Register" Assortment. Same as No. 5000-63 except assortment contains 500 insulated, single-grip terminals in 20 different types and sizes. Plastic insulation is color-coded for size. Size: 13-1/4"x9-1/4"x2".

ATTACHING TOOLS



No. 1900 Tool. Features specially designed crimping dies for use on non-insulated type terminals . . . forms cold weld between wire and terminal barrel. Cuts wire, strips wire and crimps terminals 22 to 10 gauge AWG. Plastic comfort grip handles.

No. 1963 Tool. Patented, all prupose wiring tool cuts wire, strips wire, crimps insulated and non-insulated terminals and slices 6 sizes of bolts (4-40, 5-40, 6-32, 8-32, 10-32, and 10-24). Special features include end positioned wire cutter for reaching into hard-to-get-at places, and new bolt slicing principle that permits less hand pressure for slicing bolts with no burrs to file. Plastic comfort grip handles.

No. T1710 Tool. One tool . . . one die . . . crimps all styles of insulated and non-insulated terminals in wire range from 22-10 gauge AWG. Built-in ratchet with safety release assures uniform crimps every time, and compound lever action from narrow span handles puts "ease in the squeeze." Terminals are quickly positioned for double crimps by special terminal locator. Plastic comfort grip handles.

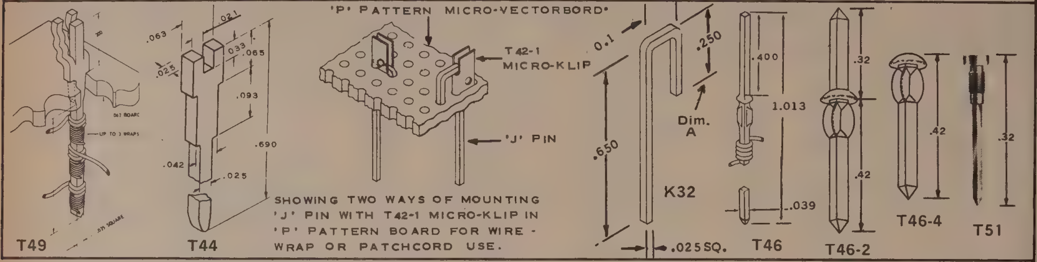
No. 19730 Wire Plier. Unique, highly versatile wiring tool will crimp 7mm ignition terminals and 6 and 8 gauge non-insulated terminals, as well as 10 to 22 AWG insulated and non-insulated terminals. Other features include a wire cutter, stripping dies and bolt cutting dies. Large, comfortable plastic cushion grip handles.

VACO PRODUCTS COMPANY • 510 North Dearborn St. • Chicago, Ill. 60610 • Phone: (312) 467-0123

Vector WIRE WRAPPABLE TERMINALS – TOOLS

WIRE WRAPPABLE TERMINALS AND PINS

Vector "wrap-post" terminals are stamped from high grade phosphor bronze (for hardness) and have sharp corners (maximum radius .003") for "gas-tight" connections when properly wrapped with Vector P160-4 Power Wrapper or other wrapping equipment. Like many other Vector terminals, wrap-post terminals may be installed with inexpensive hand tools. **As a result of their unique board holding design, when properly installed, terminals hold tightly to meet all production requirements.** Wrap-post terminals may be installed wherever required without high cost machines. They are ideal for building sub-assembly production boards for later incorporation in larger assemblies. Most models fit 0.042" dia. circuit board holes ("P" Pattern Micro-Vectorbord®) and those with knurled or "stepped" shank designs may be used in plated-through holes. Different tail lengths accommodate single to multi-level wraps.



SHOWING TWO WAYS OF MOUNTING 'J' PIN WITH T42-1 MICRO-KLIP IN 'P' PATTERN BOARD FOR WIRE-WRAP OR PATCHCORD USE.

T49 TRIFURCATED KLIP-WRAP

Unique three-fingered clip on upper end makes this a time-saving terminal for production or experimental uses. The spring clip holds leads from 0.018" to 0.025", 0.032" or 0.040" until soldered. Hand Insertion Tool P156 is adequate for installing a few at a time, but Spring Impact Tool P158 and D-8 Die Point are recommended for larger quantity installation due to the speed and ease of use.

T44 MINIWRAP

Low profile upper end has .021" wide by .055" deep slot for laying in small wires. Ideal for miniatured assemblies which are to be wire wrapped.

K32 "J" PIN

Lowest cost wrappable terminal. May be used alone in circuit board hole by inserting into two adjacent 0.028" to 0.042" dia. holes and bending shorter leg over for retention. Hooked end can also be embedded in encapsulated assemblies and wraps made on protruding tail. Illustration also shows terminal being used to provide wire wrappable extension tail to T42-1, a solderable Micro-Klip terminal.

T46 MINIWRAP - 0.028" SQ.

Sturdy double ended terminal fits 0.042" dia. holes. Has flanged midsection.

STAR SERIES T46-2,-3,-4 - 0.025" SQ.

This 0.025" sq. double ended terminal stands rigid in 0.042" holes without wobble due to four protrusions on the terminal corners in the terminal midsection. It is ideal for printed circuit applications because the seating flange creates a natural solder fillet bonding point.

T51 SERIES

Lowest profile rounded head is low enough to fit beneath installed DIP packages. Head diameter is .072" and may be used as a solder point for wave or "tack" soldering.

WIRE WRAPPING TOOLS

The Vector P160-2A Tool for wrapping wire is the ideal, low-cost manual tool for making solderless wrapped connections. The hardened bit insures long life. The effective radius of .070" permits working on terminals spaced 0.1" apart. The tool will wrap 0.025-0.028" sq. Wrap-Posts (standard Vector terminals), and its 0.56" minimum post hole depth permits multi-level wrap capability. Wire sizes range from 26 ga. through 30 ga., with 28 ga. (0.0129" dia.) preferred. Tool may be used for wrapping bare wire point to point, or for continuous strapping using bare wire fed through the back end of the tool.

P160-1A Dual-Way Unwrap Tool slips over terminal and is turned to unwrap wire which was wrapped either right or left. Use with P160-4L for powered unwrapping of wires wrapped clockwise, and with P160-4R for unwrapping wires wrapped counter-clockwise.

The convenience of a power tool is supplied by the P160-4R (Right Hand) Rechargable Electro-Tool. This lightweight unit (9 oz.) accepts the P160-2A Manual Wrapping Tool (see above) in its chuck. The sturdy, shock-resistent, high torque P160-4R is shaped in a straight configuration, convenient for working on horizontal as well as vertical panels. Just a touch of the switch on its side with the index finger provides 6 to 8 gas-tight wraps. May be used remotely without cord for many hours without recharging-- or may be used with cord to extend its working time.

P160-2A	Manual Wrapping Tool
P160-4R	Power Wrapper, 110V to 2.9 VDC recharging unit, wall hanger, 6' plug-in cord. Order P160-4L (for left hand).
P160-1A	Manual Unwrapping Tool
2323A-28-3	28 ga. bare tinned copper wrapping wire, 50' roll
2323A-28-4	28 ga. tinned copper wrapping wire, Kynar insulated, 50' roll
2323A-32-4	Belsol Solder-Through insulated wrapping wire, 32 ga., 50' "

Vector SOLDERABLE TERMINALS – TOOLS

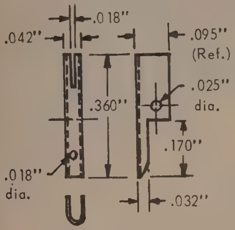
SOLDERABLE TERMINALS AND PINS

Stamped Push-In Terminals -- Hold WITHOUT Staking Faster to Install -- Inexpensive -- Hold Component Leads Until Soldered

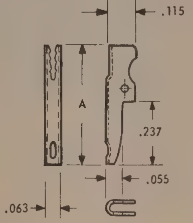
Vector Push-In Terminals for All the Most Popular Hole Sizes -- 0.042", 0.062", 0.093"

Suitable for PC Board Production, Prototyping and Experimenting

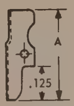
No Expensive Installation Machines Required -- Just Inexpensive Hand Tools



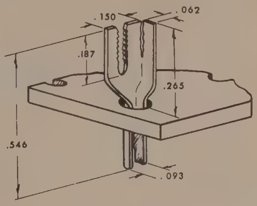
T42-1



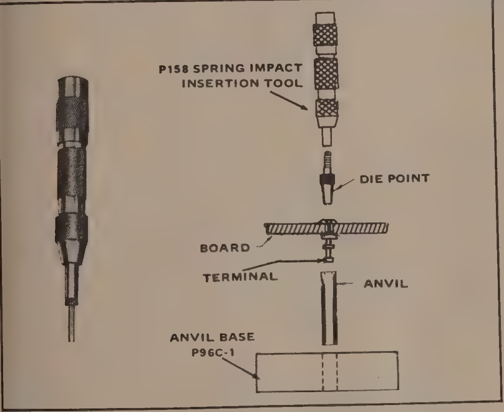
T28



T28-1



T9.4



SPRING IMPACT TOOL P158 AND ACCESSORIES

The P158 spring loaded installing tool delivers an adjustable striking force of 18 to 34 lbs. to a terminal anvil or installing die screwed into the end. It is ideal for production terminal and wrap-post installation because of the uniform striking pressure resulting in well-seated terminals. The tool may be adapted to any drill or arbor press accepting a ½" shank furnished on the P158-1 Adapter. Anvils and dies are available for use with nearly all Vector terminals and many screw machine terminals.

Part No.	Description
P158	Spring Impact Insertion Tool
P96C-2	Holder to adapt die point to arbor or drill press, or to adapt die point to anvil base
P96C-1	Anvil Base
P158-1	Holder to adapt P158 for arbor or drill press

ALIGNMENT BLOCK MB45-20-062

This alignment block is 5/8" high by 4½" long by 2¼" wide and has holes on 0.1" centers. The block is used to insure perpendicularity of wrap-post tails during their installation in circuit boards. Additionally, it provides support during installation of wrap-post or other high-insertion-force terminals.

T42-1 MINIATURIZED COMPACT PUSH-IN

Fits 0.042" dia. holes such as in "P" and "Q" Pattern Micro-Vectorbord® and can be mounted on 0.1 in. centers side-to-side. Tintillate plated. Main slot holds three to four 0.025" dia. 22 ga. wires, two 0.032" dia. 20 ga. wires, or five 0.016" dia. 26 ga. wires. Cross holes in upper part accommodates 0.025" wire (22 ga.). Small hole in bottom tab accepts 0.018" transistor size wires. Ideal for IC work because leads can be laid in slots or pass through terminal vertically. By addition of soldered K32 "J" pin series terminal, converts to wire wrappable type (see illustration, on Vector wrappable terminal page).

T28 SERIES

Compact push-in fits 0.062" dia. holes in printed circuit boards and Vectorbord® Patterns B,F,G and H. Deep springy main slot holds leads in serrated teeth until soldered; additional cross hole is useful for busing; and tab end is furnished with slot or hole as indicated. 20 ga. 0.032" dia. wires may be run down center of terminal. Staking is not required, but may be done by flattening the tab end with a pair of flats, or flaring the tab end and subsequently cutting across the "U" with a pair of diagonal pliers. Tintillate or silver plated. All models in phosphor bronze material.

Installation of T28:

P91 Insertion Tool has terminal holding hole and ¼" metal shaft for hand use or mounting in arbor or drill press. P91A has wooden handle on ¼" metal shaft with terminal holding hole in end. "Pusher" tool may be readily made by using ½w or 1 watt resistor with wire on one side cut to about 9/16" for guiding terminal down into hole and pushing in.

T9.4 AND T9.6 SERIES

Push-in type fits 0.093" dia. holes in printed circuit boards or Vectorbord® "A" and "AA" Patterns. Serrated teeth (on all except T9.4A type) holds leads 0.032" to 0.040" in slots until soldered. Sturdy construction holds larger components readily. Wires of up to 0.040" may be passed down through center slot. Staking is not required, but may be done by flaring the "U" shaped end with round nose pliers and subsequently cutting across the flare with diagonal cutting pliers. Supplied with tintillate plating for easy soldering. T9.6 type is beryllium copper and has more "spring" action in slots and shank.

Installation of T9.4 and T9.6 Types:

P122B Insertion Tool holds terminal in end and has wooden handle. Long nose pliers may also be used.

High quality beryllium copper gold plated four-fingered contacts are housed inside gold plated brass screw machine terminals with solderable or 0.025" sq. wire wrappable tails for installing wherever required in 1/16" thick circuit boards. Models R30 and R31 have lower profile than low profile DIP sockets and press fit into 0.055" dia. holes. Model R32 fits 0.042" dia. holes in "P" Pattern Micro-Vectorbord® or DIP Plugbords.

		Dimensions					
Part No.	Tail Type	A	B	C	D	E	Supplied in Pkg.:
R30	Solder	.250	.100	.072	.030	---	25, 100, or 1000
R31	WW	.703	.500	.072	.030	---	25, 100, or 1000
R32	WW	.745	.500	.072	.155	.075	25, 100, or 1000

P158 Impact Insert. Tool w/D10 Die Point inserts R30, R31; **w/D9 Die Point** inserts R32. **P158-1 Holder** adapts Tool to drill or arbor press.

SOCKET PINS FOR TRANSISTORS

Low cost gold plated beryllium copper socket pin accepts round wires, such as L.E.D.s and transistor leads, 0.014" to 0.017". Pins press-fit in 0.1" centers in 0.042" dia. holes in "P" Pattern Micro-Vectorbord®, DIP Plugbords, or drilled circuit boards. Extremely low profile (extends 0.015" above 1/16" thick circuit board) pins are 0.230" long and may be wave or hand soldered into circuits. R41 Socket Pin Pkg. 50, 1000

DIP SOCKETS

Vector DIP sockets have high quality beryllium copper or phosphor bronze gold plated contacts in glass filled nylon castings. Tapered lead entry on all models facilitates DIP insertion and castings are "keyed" for proper orientation. All models will fit "P" Pattern Micro-Vectorbord® or DIP Plugbords. Contact tails are 0.025" sq. for wrapping or solder tab type as indicated. Solder tab models have barrier to prevent solder wicking up inside contact.

KLIP-STRIPS

For leads 0.055" to 0.032" max. diameter. Handy low resistance solderless contacts are ideal for use as test points, or for plugging in devices such as operational amplifiers with random spaced leads or for DIP or transistor leads. Clips are furnished with or without press-in mounting pins for push-in or adhesive mounting on circuit boards. Only 0.095" wide by 0.382" long, Klip-Strips have 4 top entry holes into a multiple tandem clip. Klip-Strips have insulated brass shells and beryllium copper contacts with fused tin lead plating.

T45-4	Klip-Strip w/two .040"mtg.pins spaced 0.2"	Pkg. 16 or 100
T45A-4	Klip-Strip without mounting pins	Pkg. 16 or 100

CUP RECEPTACLES FOR 0.040" DIA. PINS

Vector Cup Receptacles accept 0.040" dia. Inbord Pins. High reliability press formed phosphor bronze contacts are positioned in brass shells with contact tabs emerging through a slot in one end. May be mounted anywhere on 1/16" or 3/32" panels in 0.140" dia. holes with staking tools listed below. Cup spacing should not be less than 0.2". A special staking anvil for the 0.2" spacing is listed giving greater clearance between the edges than the standard anvil. Staking and holding tools have ½" dia. shank for arbor or drill press use. P95 provides uniform "roll"; P95A provides oblong "roll" for 0.2" spacing.

SPECIFICATIONS.

Cup: Half hard brass, bright tin plate per MIL-T-10727.

Contacts: Phosphor bronze, nickel plate per QQ-N-45204, Type II.

			Staking Tools	
Part No.	Description	Dim.A	Circular Roll	Oblong Roll
R23A	Cup Receptacle for .062" thick board.	.095	P95	P95A
R24A	Cup Receptacle for .093" thick board.	.127	P95	P95A

P95B Cup Holder – Use for both stakers.

SLIP-ON CONTACTS FOR 0.025" SQ . POSTS

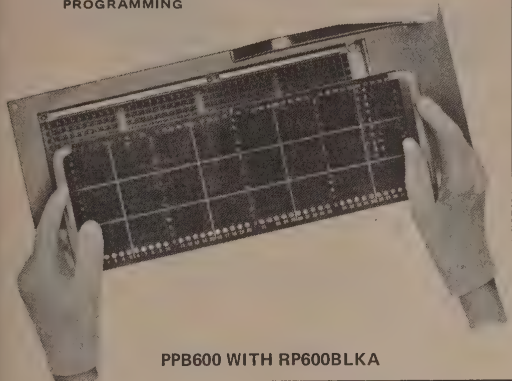
Use for solderless connection to 0.025" sq. posts on Vector Wrap-Post terminals or I.C. sockets. Loose contacts are tin plated and supplied without insulation. "Daisy chain" type are gold plated, insulated, and connected to No. 26 vinyl insulated wire 5" apart.

T120	Slip-on single contacts, solder type, tin plated.	Pkg. 50
T120-1	Slip-on contacts, "Daisy Chain" spaced 5", No.26 insul. wire, nickel & gold plate. Blue Insulation.	Reel 50 or Reel 250

VECTOR ELECTRONIC COMPANY, INC. 12460 Gladstone Avenue, Sylmar CA 91342 Phone (213) 365-9661 TWX 910-496-1539

Vector PATCHBOARD PROGRAMMING SYSTEMS

For: RELIABILITY — TEST AND CONTROL SYSTEMS
LONG LIFE, LOW NOISE CONNECTIONS
204, 300, 450, 600, 1200 CONTACT SYSTEMS
ANALOG AND DIGITAL COMPUTER PROGRAMMING



PPB600 WITH RP600BLKA

PREPROGRAMMING PATCHBOARDS

Functionally, Vector preprogramming patchboard systems work as a multi-contact switch which makes up to 1200 connections at the throw of a lever. These connections can be made in any combination due to the program panel. Contacts on the back of the receptacle frame are connected by soldering or wire wrapping to the functions being controlled or tested. Interconnection arrangements are set up on the removable program panel with patchcords which make contact with the receptacle frame contacts when the program panel is put into the frame and engaged by depressing the hand lever. Test programs may be pre-arranged in extra program panels, thus speeding up test running by eliminating costly reprogramming time between tests.

SPECIFICATIONS.

Receptacle Frame Contacts: Heat treated beryllium copper, nickel plus tin or gold plating, staked in epoxy laminate. Wire wrappable types (W) have wrap tails; solder contact models have 2 holes in tabs for wire attachment.
Frame: Welded steel with hardened steel cam engagement mechanism, grey painted finish.
Removable Program Panels: Black paper based phenolic or epoxy paper to special order.
Rack Adapter Plate: 19" wide with holes for rack mounting, 1/8" thk. steel, painted light grey, with cutout for receptacle frame.
Operational: Maximum operating voltage 1500 V.D.C. or 1000 V.A.C.
Leakage Resistance Between Adjacent Contacts: In excess of 5000 megohms.
Continuous Current Rating: Max. 5.0 amps, AC/DC.
Capacitance Between Any Two Contacts: 2.5 mmfd. max.
Total Resistance At Contact: Less than .01 ohms from nickel plated contact to nickel plated plug; less than .003 ohms from gold flashed contact to gold flashed plug.

† Custom silk screened panels available to order. Write factory for layout sheets.

* Front Face Panel to tab contact ends at back. Handle in engaged position extends 2½" above panel; during disengagement when program panels being removed, lever end extends 4" above receptacle frame panel.

FIXED PANEL PATCHBOARDS

These low-cost, high reliability patch panels are ideal for test or control panels in all types of equipment where connection ease and flexibility is desirable. All models have heat treated "wrap-around" beryllium copper nickel plated gold flashed contacts mounted in aluminum framed phenolic panels on 0.265" centers. Tabs at rear of patchboard have two holes for soldered connections. Interconnection between the patch panel contacts is readily made with various types of patchcords having 0.090" dia. prongs which plug into contacts located behind holes in front insulating panels. For programming and wiring ease, front and back panels have standard printed alpha-numeric legend. Custom marked (or colored) panels are available to order. Unmarked bottom sides of front panels may be marked by user if removed from aluminum frame and reassembled after marking. The 10, 20, 50, and 100 contact units are of equal width so units may be "stacked" to achieve larger number of contacts. Sturdy, attractive anodized frames on all units provide finished appearance, and have brackets for panel mounting.
Custom units in special sizes, with or without brackets, are available to order. Contact factory.

*Front Panel unprinted; all others have standard legend.

PATCHCORDS

Patchcords are No. 20 gage vinyl insulated stranded wire in color coded lengths with vinyl shrouded 0.091" dia. brass nickel plated plug tips. Special cord lengths may be made by user by ordering K2001-2 prongs and T7.39 eyelets to which he connects own wire and prong insulation.

SPECIFICATIONS.

Maximum Current: 5 amps.
Contact Resistance: Less than .001 ohms.
Capacitance Between Adjacent Contacts: Less than 1.0 pf.
Resistance Between Adjacent Contacts: More than 10,000 megohms.
Maximum Operating Voltage: More than 1500 V.D.C. or 1000 V.A.C.

Shallow-bracket mounting

SEVEN EXCLUSIVE INNOVATIONS

Standard Beau connectors offer special innovations not available from other manufacturers—like the seven described here—only from Beau. And Beau's prices offer you a big advantage.

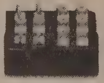
1. PRE-GROUNDING—see next page.

2. THERMOPLASTIC BACKSHELLS.

(Metal also.) Resilient thermoplastic backshells provide greater dielectric strength and greater safety. They're also non-rusting and acid resistant. UL; CSA.

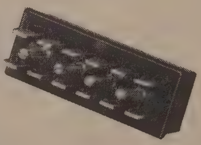
3. WAVE SOLDERABLE CONTACT TAILS.

Special tail design (S_6) allows for mounting directly to PC boards and flexible circuits—and gives you the economy of automatic wave soldering. 3300 series. UL; CSA.



4. 16 CONTACTS IN THE SPACE OF 12.

Our 15 amp connectors can have up to 16 contacts—4 more than other 15 amp makes. That's 33% more contacts in the same amount of space. UL; CSA.

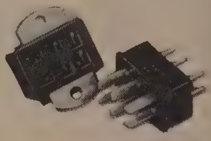


5. PANEL MOUNTED IN ONE-FOURTH THE TIME.

C-clip mounting of Beau connectors cuts panel mounting time by 3/4ths. No drilling. No screws. Just slide on C-clips and it's secure. 3300, 5400 Series. UL; CSA.

6. SELF-POLARIZING 6-CONTACT CONNECTOR.

With contacts set in opposing directions, even a heavy hand can't mismate our 6-contact 10 amp plugs and sockets. UL; CSA.



7. HERMAPHRODITIC SELF-POLARIZING.

With male and female contacts in both halves, or with conventional polarization. Can gang in building block fashion. 50 amp.

BEAU® PRE-GROUNDING CONNECTORS

3300 SERIES: 10 amps per contact
5400 SERIES: 15 amps per contact

PRE-GROUNDING FOR GREATER SAFETY

Beau gives you the greater safety of U.L. recognized pre-grounding plug and socket connectors. The extra long grounding contact engages before any other active contacts are mated. Available for chassis and cable mounting.

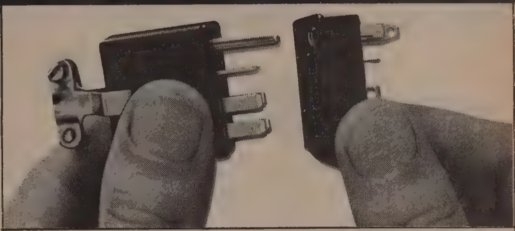
LOWEST INSTALLED COST

Only Beau offers the longer pre-grounding contact. Thus, you will never have to cut any contacts to a shorter length to achieve a safer connection. No more costly, time-consuming hand cutting operations.

CONTACT POSITION

In the 3300 Series, the grounding contact takes the place of a regular contact. Connector sizes 3324 through 3333 are already of the pre-grounding type, and there is no need to specify the grounding contact.

In the 5400 Series, the grounding contact is an additional contact position rather than taking the place of a standard contact.



SPECIFICATIONS

For other specifications and data, see previous page.

Rating: 3300 Series, 10 amps per contact at 250 v,
5400 Series, 15 amps per contact at 250 v

Grounding contact rating: 30 amps at rated voltages.

No. of contacts: 3300 Series, 3 to 33 (incl. grounding contact),
5400 Series, 5 to 13 (incl. grounding contact)

Grounding contact: Extra long, heavy-duty plated brass.

Grounding contact tail: 5400 Series, mounted on an elevated creep path barrier that puts required distance between ground and active contacts.

U.L. recognized.

CSA certified.

BEAU® HIGH-BARRIER RESILIENT TERMINAL STRIPS

72000 SERIES:

SINGLE ROW; 3/8" CENTERS
20 AMPS, 600 VOLTS
FEED THRU AND CLOSED BACK

BEND BARRIERS WITHOUT BREAKING

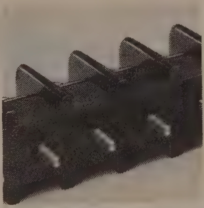
Beau's flexible barrier strips reduce breakage dramatically because they are made of highly resilient glass-filled thermoplastic materials. Impact strength is many times greater than phenolics. Production line and in-field damage (and time-consuming re-wiring) are virtually eliminated.

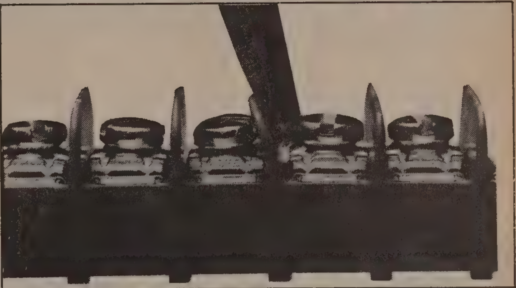
PROTECTS SOLDER JOINTS FROM DAMAGE

Exclusive from Beau—terminals are ultrasonically welded to the base. This eliminates solder joint damage from torqueing screws, or from strain in dressing down wire bundles. Also, pull-out strength is double the other makes.

CONTACT TAILS ENCLOSED

Cavities are eliminated around dip solder contact tails. This allows mounting directly on PC board without affecting circuit isolation. It eliminates entrapment of foreign matter, reduces solder wicking.





SPECIFICATIONS

Size: 5/8" w x 21/32" h

No. of terminals: 1 to 26

Terminal styles (bottom):

- Printed circuit
- Printed circuit/wire wrap combination (with long extended tail)
- Quick connect tab (insulated feed thru)
- Solder turret (insulated feed thru)
- Closed back

Terminal styles (screw side):

- #6-32 x 1/4" binding head screw
- Wire clamp plate, self rising
- Quick connect tab (1 to 6 terminations)
- Solder terminal, single or double

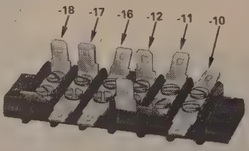
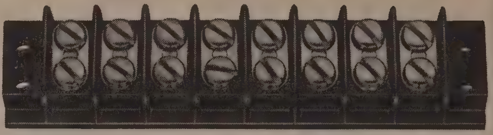
QUICK CONNECT TERMINALS

Beau Quick Connect terminals cut assembly time and costs; improve connections; eliminate cold solder joints. In 1- and 2-sided types for single- and double-row strips. Cadmium-plated brass.



DOUBLE-ROW TYPES



Available in 10, 15, 20 and 30 amp models, they can be molded in general-purpose phenolic, glass-filled phenolic, or highly resilient glass-filled thermoplastic materials. Nickel-plated brass terminals and screws. Marker/insulation strips and covers available for added safety (in vulcanized fiber or phenolic). Choice of printing styles.

BEAU® PC EDGEBOARD CONNECTORS

FOR .062" BOARDS
SOLDER DIP AND SOLDER EYE
DUAL READ-OUT
SERIES 8500: 600 vac; .125" contact centers
SERIES 8600: 750 vac; .156" contact centers

Beau Edgeboard Connectors are designed for heavy usage in commercial applications where economy is an important factor. They're designed for low, stable contact resistance (up to 50% lower than others), mimimum wear of mating surfaces and excellent mechanical abuse withstanding qualities. Problems from vibration and board irregularities are minimized.

Unique bow design has improved spring characteristics, reduced fatigue. A modified ribbon contact has cantilever action and maximum wiping action.

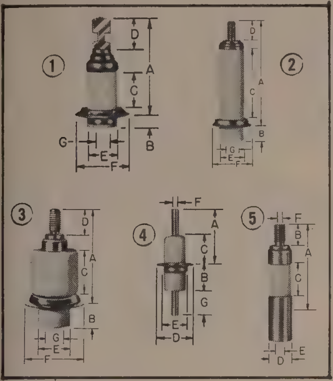
VICTOREEN METALIZED CERAMICS

ALITE TERMINALS • BUSHINGS • SEALS • SPECIAL ASSEMBLIES

ALITE CERAMIC-TO-METAL SEALS

The key to the performance of ALITE ceramic-to-metal seals, lies in careful attention to these three basic factors:

- Soundness of the Design
- Quality of the Ceramic
- Integrity of the Bond



ALITE HIGH VOLTAGE TERMINAL BUSHINGS

- Reliable Electrical Characteristics
  - Excellent Dielectric Strength
  - High Surface Resistivity
- Vacuum-tight, Mass Spectrometer Tested
- Superior Mechanical Strength
- High Temperature Resistance
- Resistance to Thermal Shock

STANDARD PART NUMBERS for fluted terminals indicate certain physical features of each terminal. For example, Part No. 4-4-3B indicates the following:

4 — size designation
4 — number of flutes
3 — number of terminals
B — type of terminal cap

NOTE: Voltage ratings are average, measured at 40% RH at sea level. Voltages are 60 cycles RMS.

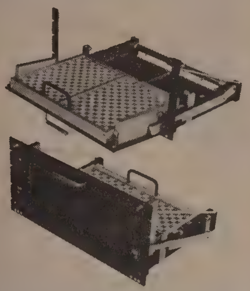
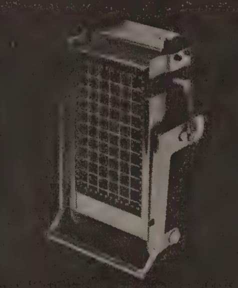
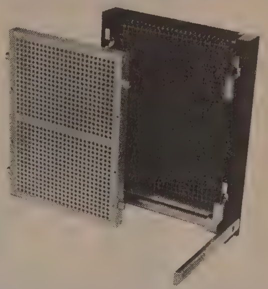
Patchboard Programming Systems and Accessories



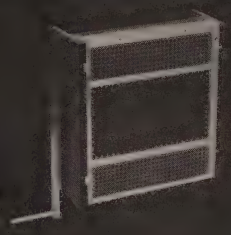
Drawer Type Systems—a roll cam designed for horizontal mounting to save up to 50% in panel areas. Also provides R.F. shielding. Five standard sizes range from 480 to 1870 contacts. All fit 19" wide racks.



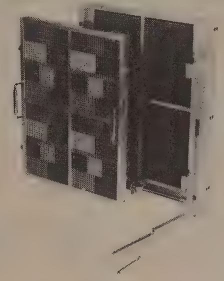
Lever Lock Systems—are most utilized by large computer manufacturers. A lever provides the necessary force to simultaneously mate up to 680 patchcord tips and paddle contacts. A smaller model offers 252.



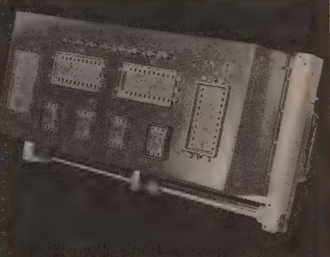
Shielded Systems—Each paddle contact is isolated with medal shielding. Crosstalk reduction is 92 db at 1000 cycles, 100 volts peak to peak. There are six models ranging from 360 to 4200 contacts.



True Thru-Shielded Systems—offer individual shielding, matched impedance, VSWR of 1.01 from 100 MHz to 500 MHz. These advanced programming systems can be manufactured to virtually any specifications.

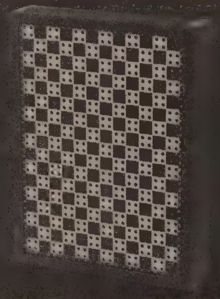


Roll Cam Systems—offer greatest capability and reliability, large number of contacts (24 sizes from 48 to 5120 contacts). Camming action engages full patchboard gently and accurately.



Pre-Wired Systems—can be standard panel boards wired to special quick connectors to eliminate hours of wiring and permit instantaneous re-circuiting. The 2560-contact roll cam system shown terminates in only 13 connectors.

Plating—Nickel or Gold
Board Material—Phenolic or Diallyl Phthalate
Contact Diameters—.093 and .053
Connections—Solder, wire wrap or Locktite
Finish—clear polish or black anodized
Silk Screen—Alpha/numeric grid or special designs
Patchcords—Manual or fixed; single tip to nine-prong tip; squids; splits; shunts.
All unconditionally guaranteed.
Tools—a variety of 27 tools for crimping, extraction, insertion, and paddle contact.
Send for complete 40-page catalog today.



Fixed Systems—26 standard models ranging from 30 contact points to 7,188 combine reliability and economy to meet a wide variety of programming needs primarily in industrial controls and communications.

We have salesmen in 42 U.S. Cities. Please refer to the proper section in this catalog for the one nearest you, or contact our factory in Waynesboro, Va.

◆

Besides our 75 standard models of programming systems, some of which are described on this page, VPC also produces a wide variety of custom products.

◆

We invite your inquiries and will appreciate your business.

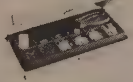
DESIGNER KITS



The MINIATURE SERIES No. WM-72 (using .062" pin terminals) Designer Kit contains parts to assemble male and female connector housing from SINGLE-CIRCUIT to 36-CIRCUIT COMPLETE CONNECTORS. (Total of 56 Connectors.) Includes crimping tool and pin terminal ejector tool. WM-72 KIT EACH $34.95

A must for every creative designer, repairman and experimenter . . . as modern as today's circuitry. Eliminates need of searching for proper connectors or tools — everything is under one lid. This polarized Nylon Connector Designers Kit comes with all circuit capacities, complete with Male and Female housings, terminals, and crimp tool. Separated in individual compartments, each connector element is numbered and described, enabling you to re-order when running low.

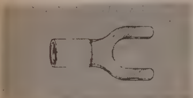
This light-weight, unbreakable kit closes with a snap-lock to avoid spills and mix-ups. Each kit contains a prototype hand crimping tool, specially balanced and weighted for ease of operation. Machined from hardened-steel, this tool provides excellent, uniform crimps every time. It also cuts and strips wire. Each kit also contains a special terminal ejector tool, and detailed crimping instructions permanently affixed and mar-proof.

WALDOM/MOLEX also produces a Designer Kit in the STANDARD SERIES No. WM-50 (using .093" pin terminals). Similarly, it has all the elements and tools necessary to make up standard connectors in all sizes. (Single circuit to 15 circuits in the standard series.) Total of 45 complete connectors. WM-50 KIT EACH $29.95

Manufactured by Molex Products Co. These items are made available from leading electronic distributors through Waldom Electronics Inc.

FOR LARGER QUANTITY PRICES, CONTACT WALDOM ELECTRONICS

SOLDERLESS TERMINALS AND CONNECTORS



S TYPE (1000 SERIES)

Basic non-insulated electro-tin plated copper terminal. One-piece construction for maximum strength and conductivity.

Vinyl Insulating Sleeve

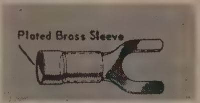
T TYPE (2000 SERIES)

All advanced features of S TYPE plus permanently attached rigid vinyl plastic insulating sleeve for increased vibration resistance. Temperature range from −40°F to 220°F continuous duty to 220°F intermittent duty.

Brazed Barrel

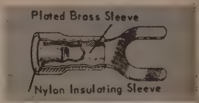
B TYPE (3000 SERIES)

Advantageous features of S TYPE plus the higher tensile strength afforded by BRAZED BARREL construction.



D TYPE (4000 SERIES)

Particularly suitable where high vibration is a factor. S TYPE construction plus seamless annealed electro-tin plated brass sleeve.



N TYPE (5000 SERIES)

All D TYPE features, tin plated brass sleeve plus permanently attached overlapping nylon insulating sleeve. Temperature range −40°F to 250°F continuous duty — to 350°F intermittent duty.

Insulated terminals color coded: 26-24 Yellow, 22-18 Red, 16-14 Blue, 12-10 Yellow UL & CSA LISTED

Material: Annealed electrolytic copper, electro-tin finish. Modern one-piece design for maximum strength and conductivity. With strength gusset, open end rapid inspection, beveled edge to facilitate wire insertion. Circumferential serrations for maximum contact area and grip. Full 1/4 inch barrel length, wide crimping area, easy location.

Wire ranges 26-24, .020 stock. 22-18, .032 stock. 16-14 .030 stock. 16-12, .050 stock. 12-10, .040 stock. No. 8, and No. 6, .050 stock. No. 4, .075 stock. Terminals in 22-18 and 16-14 wire range are available with 5/32" barrel by adding "S" to front of part desired.

MACHINED ANODIZED

All ALCO aluminum knobs are precision machined from special alloys. Anodized in natural, black or gold, depending on model selected. Five basic diameters from 1/2" to 1 3/4". Choice of styles from a variety of plain, knurled, fluted or grooved designs.

All standard series offer a choice of sizes, and the most popular styles have matching concentric, skirted, and spinner options. 1/8" and 1/4" shaft hole diameters are indicated by type number suffix. Allen head cup point stainless steel set screws are standard.

DATAK •dry transfer marking kits

MARK

- *CONTROL PANELS*
- *METERS & DIALS*
- *CIRCUIT BOARDS*
- *DRAWINGS & ART*
- *CHASSIS PARTS*
- *PILOT LIGHTS*

A ballpoint pen will transfer these amazing words, letters, numbers or symbols to any clean surface! JUST RUB AND IT'S MARKED. Reproduction quality printing is clean and sharp with no background film or haze. Heat resistant adhesive is safe for diazo copies. Makes your prototypes look like production units. Coat panels with DATAKOAT for permanency.

The complete DATAK catalog lists many other kits including organic chemical symbols, schematic and logic symbols, drafting alphabets, printed circuit patterns and tapes. Also ask for the complete LETRASET catalog listing thousands of alphabet sheets.

titles for electronic equipment

BIAS BIAS BLANKING BINARY
RAL BLANK BINARY BLANKING
ING BLEND BLEND BLOCKING
BLOCKING BLOWER BLOWER
N BLOWN BLOWN BOOSTER BNC

This popular set for professionals has well over 2000 titles plus letters and numbers. 24 sheets cover audio, aircraft, controls, communications, computers, microwaves and other specialties. Coat transferred titles with DATAKOAT for permanency.

OVER 100,000 STRONG

Every month over 100,000 buyers and specifiers like yourself receive Electronic Products Magazine . . . that makes us the largest electronics magazine around. And we're the largest for a darn good reason . . . we give you what you need: a practical editorial approach . . . one that's application and new product oriented. Editorial that offers solutions to the problems you face in your everyday task of designing and building electronic systems and subassemblies. The type of information you can put to use now.

If you're not getting EPM . . . why not write our circulation manager for a qualification form and join the over 100,000 strong.

INTERLOK

ONE OF THE **PURDY** GROUP OF COMPANIES

Knobs and Accessories

770 AIRPORT BLVD. • BURLINGAME, CA 94010
(415) 348-5625 • TWX 910-374-2353 • TELEX 34-9373

INTERLOK offers two basic knob styles; with or without wings, and with or without line markings. The diameters include 10-mm, 14.5-mm, 21-mm, 28-mm and 36-mm. You have a choice of three cap styles, nine different colors, nine standard variations in figure dials and the ability to order special dials. The standard collets will fit 1/8″ shafts on the 10-mm, 14.5-mm and 21-mm knobs, and 1/4″ shafts on the 14.5-mm, 21-mm, 28-mm and 36-mm knobs.

Versatility, design and engineering pace-setting standards are only the beginning of our knob story. Throw away those Allen wrenches, and don't scratch any more front panels. Our knobs mount easily and securely without damage to the knob or to your products.

A large selection of standard figure dials, plain and skirted pointers, stators, and other indicators add to the flexibility of the system and eliminate the need for obtaining any part from another source. Depending on the knob size, dial division ranges from 30° to 60°.

Because of the unique collet used on all INTERLOK knobs, the 10-mm and 14.5-mm, the 14.5-mm and 21-mm, and the 21-mm and 28-mm knobs can be combined to form concentric knobs.

INTERLOK also has binding posts available in two sizes, 10-mm and 14.5-mm, and six different colors including the new international standard for ground terminals, green with yellow stripes.

Contact INTERLOK for a complete catalog and begin putting together your own custom knobs.

Knob Designer Kits

INTERLOK has a great idea for the packaging designer. We have a series of five designer kits that give you a complete idea of the many applications for each of our knob sizes. Each kit contains one of every item relating to that size knob.

Description	Part Number
10 mm Knob Designer Kit	070-1000
14,5 mm Knob Designer Kit	070-1450
21 mm Knob Designer Kit	070-2100
28 mm Knob Designer Kit	070-2800
36 mm Knob Designer Kit	070-3600

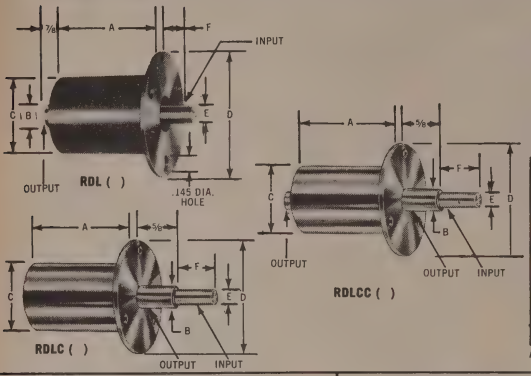
RATIO DRIVES FOR FINE INSTRUMENT AND MACHINE CONTROLS

BALL BEARING TYPES — Compact, Durable, Exceptionally Smooth Action

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

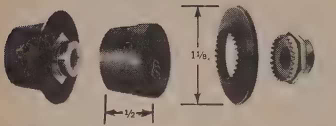
Input and output snafts of these units operate in the SAME DIRECTION. Type "RDL" provides "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of Type "RDLCC" is the output shaft in the rear.



Cat. No.	Ratio	A	B O.D.	B I.D.	C	D	Input Shaft E	F	Bolt-Mtg. Dia.
RDL-1	2.6:1	1	3/8	1/4	1 1/8	1 13/16	1/4	3/4	1 15/32
RDL-2	7.0:1	1 13/32	3/8	1/4	1 1/8	1 13/16	1/4	3/4	1 15/32
RDL-3	17.0:1	1 13/16	3/8	1/4	1 1/8	1 13/16	1/4	3/4	1 15/32
RDLC-1	2.6:1	1	3/8	1/4	1 1/8	1 13/16	1/4	1 1/2	1 15/32
RDLC-2	7.0:1	1 13/32	3/8	1/4	1 1/8	1 13/16	1/4	1 5/64	1 15/32
RDLC-3	17.0:1	1 13/16	3/8	1/4	1 1/8	1 13/16	1/4	23/32	1 15/32
RDLCC-1	2.6:1	1 13/32	3/8	1/4	1 1/8	1 13/16	1/4	1 5/64	1 15/32
RDLCC-3	17.0:1	2 43/64	3/8	1/4	1 3/16	1 55/64	1/4	11/16	1 15/32

All Ratios are ±10%.

KNOB RATIO DRIVE



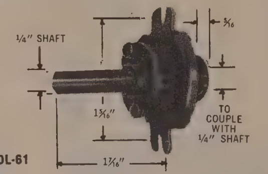
9 to 1 ratio (to dial skirt).
1:1 to potentiometer.

Cat. No. KRD-11 (Plain Gripping Surface)	**Cat. No. KRD-12** (Knurled Gripping Surface)

Exploded view shows engineered miniature gear system, to permit precise, fine tuning of controls. As shown, 9 to 1 ratio (to dial skirt). 1:1 to potentiometer. Other ratios designed to specifications.

Brass gears; black anodized aluminum knob and dial. Available with knurled or non-knurled outside knob. Available for 1/8" shafts. 1/4" on special order.

Now! Corrosion Resistant! IN-LINE RATIO DRIVE — 6.3:1



RDL-61

Variations Available to Customers Specifications

For smooth rotary control of components requiring Vernier adjustments. Suitable for use where panel space is at a premium. Durable, ruggedized ball bearing mechanism.

LIMIT STOP COMPONENTS

Designers can now consider the limit stop as a component to design with, such as potentiometers, capacitors, or other standard units. The simplicity of adjustment and the large number of available turns enables the stop range to be set with extreme precision. Conveniently located dual locking screws maintain settings under all conditions of shock and vibration.

RIGHT ANGLE RATIO DRIVES — Versatile, Miniaturized, Right Angle Rotary Controls

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide ideal type instrument control. Available with matched bevel worm gears covering a wide range of ratios.

JAN's Right Angle Drives are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

TURNS COUNTING DIALS WITH BRAKE

Turns-counting Dials for Accurate Multi Turn Settings.

These devices are continuous and Bi-directional and can be used with Potentiometers or other Multi-Turn devices having 1; 10; 15; or 20 turns.

Other dials and knobs can be supplied to special requirements.

POTENTIOMETERS / PRECISION WIRE WOUND

- LINEAR AND NON-LINEAR
- SINGLE AND MULTI-TURN
- PENDULUM OPERATED
- SECTORS AND GYRO PICKOFFS
- SWITCHES

Reliable, competitively priced wire-wound potentiometers for commercial, industrial and military electronic equipment manufacturers.

- **EXCELLENT LINEARITY:** 0.03% available in single turn 5″ diameter unit.
- **LONG LIFE:** Over two million revolutions with base metal windings.
- **WIDE TEMPERATURE RANGE:** Available for operation from −55°C to +125°C.
- **MAXIMUM STORAGE LIFE:** Platinum alloy winding also insures low noise level.
- **RELIABILITY:** Welded taps for better mechanical and electrical connections.
- **HIGH RESOLUTION:** Wire as fine as 0.0003″ diameter can be used.
- **CUSTOM DESIGNS:** Fast prototype delivery on special linear or non-linear units.
- **PRECISION CONSTRUCTION:** Anodized aluminum housings and polished steel shafts.
- **ACCURATE FUNCTIONS:** Welded taps to a single turn of wire eliminates shorted sections of winding at intermediate taps.
- **RUGGEDNESS:** Meets all applicable MIL Specs.
- **LOW NOISE** Maintained over long life and extreme environments by unique wiper designs compatible with winding configurations.

HI-VOLTAGE INSULATED COUPLINGS U.S. PATENT NO. 2,681,387

MEETS MILITARY SPECIFICATIONS — TEMPERATURE - HUMIDITY - SHOCK - VIBRATION - FUNGUS

HI-VOLTAGE INSULATED COUPLINGS

15 KV Breakdown — 10 inch pounds torque
Series No. AK-5079 and No. AK-5164

Engineered with stainless steel shaft and precision, screwdriver tip molded-integrally with Diallyl Phthalate Material in accordance with Military Specifications. Completely shock, vibration and fungus proof, they operate with ease over an ambient temperature range of −75°C to +175°C. Supplied complete with nickel plated mounting hardware.

Stainless steel screwdriver tip fits all standard slotted shafts (potentiometer, etc.) without need for further machining. Ideally suited to adjust high voltage controls thus protecting operating personnel against danger. They are also used to reduce ground capacitance on other types of sensitive instrument controls.

For Commercial Instrument Applications . . .
These couplings are available in general purpose Black Bakelite.
Cat. No. 6164-(X or B)-( ) For Standard Type
Cat. No. 6079-(X or B)-( ) with Locking Type Bushing.
Dimensions are identical with 5000 Series, in chart below.

STANDARD TYPE

Cat. No.	Dimensions in Inches			
	"A"	"B"	Shaft	"C"
AK-5164-X-1	3/8	3/16	Slotted	5/16
AK-5164-B-1	3/8	1/16	Slotted	5/16

AK-5079-B-2	9/16	1/16	Slotted	9/32

Note: (3/16″) to be used with 1/8″ long shaft.
(1/16″) to be used with 1/4″ long shaft.

HI-VOLTAGE INSULATED COUPLINGS FOR 1/8″ SHAFTS

White Cycalac material. Voltage rating: 6000 VDC. Hubs — Brass, Nickel Plated; Shafts — St. Steel.
*Insert letter "S" or "N" followed by first two numbers of decimal equivalent, for fractional length of shaft beyond bushing.
"S" = with slot. "N" = no slot.

Typical Part Number: AK-2164-N31 =
5/16″ long shaft beyond bushing (standard), no slot. If length is 1″ use "X".

Typical Part Number: AK-2164-SX =
1″ long shaft beyond bushing, slotted.
If length exceeds 1″, use "X" and decimal equivalent for balance of number.

Typical Part Number: AK-2164-NX31 =
1 5/16″ long shaft beyond bushing, no slot.

AP-1538-4	1/4	1/2	27/64	1 7/64±1/32

Cat. No. AP-1530 and AP-1538

A unique series of shaft couplers that accommodate either similar or dissimilar 1/8″, 3/16″ or 1/4″ shafts. Permits offset misalignment to 1/16″ and 5° angle. Operates free of backlash. Self-extinguishing low water absorption characteristic plastic insulator between precision cast aluminum hubs. Each hub has 2 set screws for firm attachment. Alodine finish.

1/4″ SHAFT COUPLING EXTENDER

Cat. No. AP-1010
Nickel plated brass with 2 set screws for firm attachment to shaft. 1/2″ O.D.; 1 3/4″ overall length.
Cat. No. AP-1321
Same as above, except extends 1/4″ shaft to 1/8″, overall length 2 1/2″.

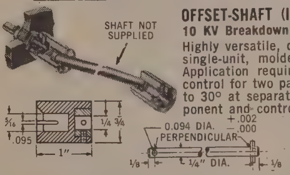
SHAFT COUPLING

Cat. No. AP-15150
A rugged, nickel plated brass coupling for joining two 1/4″ shafts. Supplied with 4 set screws for firm attachment to shafts.
Cat. No. AP-15151
Same as above, 2 set screws.

OFFSET-SHAFT (INSULATED) COUPLINGS

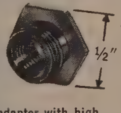
10 KV Breakdown / ±30° Offset Cat. No. AP-15299

Highly versatile, durable, insulated couplings made with single-unit, molded Nylon-to-metal insert construction. Application requires two couplings — permits smooth control for two parallel shafts offset from each other up to 30° at separations greater than 3″. Secured to component and control shafts by 2 set screws.



Note: Coupling is accomplished with a 1/4″ shaft of any length (not furnished). Coupling shaft keyed to coupler by steel drive pins supplied.

REDUCER INSERT BUSHING
Cat. No. AK771



Used as an adapter with high voltage insulated couplings to accommodate miniature (1/8″ shaft) potentiometers. External thread 3/8x32. Internal thread 1/4x32.

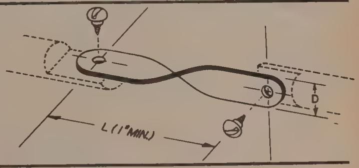
Cat. No. AP-1367

UNITWIST JAN UNIVERSAL

(shoulder screws supplied)

Specify:

1. Torque Requirement
2. Shaft Diameters (D) in increments of 1/16
3. Distance "L" in increments of 1/16″



JACK COVERS (TRIMMER COVERS)

These sturdy Jack Covers fit jack or panel bushings and are used to keep out dust and moisture as well as to prevent inadvertent disturbance of control settings. Outer surfaces are finished in standard colors of baked enamel.

To Order Colors Specify:
(-1) Black Wrinkle; (-2) Smooth Gray; (-3) Smooth Olive; (-4) Smooth Black. Other colors on request.

Example: Jack cover, color black wrinkle, order as J-1301 (-1)

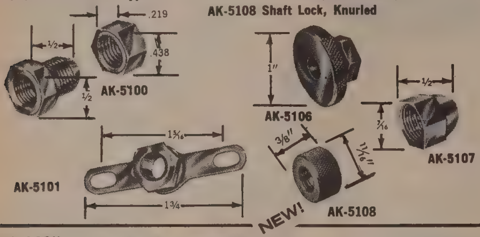
SHAFT LOCKS

Cat. No. AK-5100 thru No. AK-5107 — Split-Bushing, Collet Type Locks

Used to securely hold the shaft of volume controls, capacitors, switches, etc. in position. Body and lock nut are brass — nickel plated. Supplied with nickel plated internal tooth lock washers, upon request.

SPLIT BUSHING TYPE — For ¼″ Shafts

AK-5100 Standard Lock Nut
AK-5101 Panel Mount Type
AK-5106 Knurled Shaft Lock (1″ O.D. Knurl)
AK-5107 Lock Nut (Round Head)
AK-5108 Shaft Lock, Knurled



DIAL LOCK

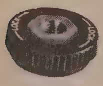
Cat. No. AP-1060

Supplied completely assembled. Securely locks dial in position. Nickel plated on brass. Knurled head. 1⅜″ overall length.

NYLON SHAFT LOCK **Cat. No. AK-1050**

One-piece, black nylon; fits standard ⅜″-32 thread of shaft bushing. Friction grip holds ¼″ shaft to prevent accidental or vibrational disturbance of control settings. Adjustment for semi-permanent locking, provided.

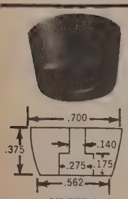
SHAFT KNOB LOCK



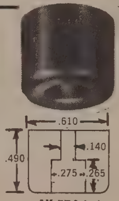
Cat. No.
AK-1057-2 (*) (⅛″ shaft)
AK-1057-4 (*) ¼″ shaft)
(Used with 71 Series Knob)
AK-1059-4 (*) (¼″ shaft)
(Used with 91 Series Knob)
*Specify "M" or "G" for matte or glossy finish.

Prevents movement of controls due to shock, vibration, or accidental manual contact. Available in matte or glossy finish, for commercial or military applications.

Typical Part Numbers: **AK-1057-2MA = For ⅛″ Shaft/matte finish/Black**
AK-1059-4GA = For ¼″ Shaft/glossy finish/Black



AK-575 ( )



AK-574 ( )

CHASSIS AND CABINET BUMPERS

Durable, low-friction polyethylene. Guards against scuffing. Supplied in either black or russet brown, with recessed hole for screw or bolt usage.

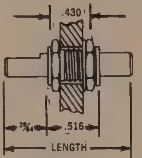
To Order Colors: Black, specify (4); Brown, specify (7). Other colors on request.

AK-574 also available in white nylon; thru hole .187 dia., C bore ⅜″. Specify No. AK-577-8

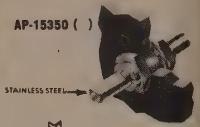
PANEL BEARING AND SHAFT ASSEMBLIES

Cat. No. AP-15350 Series

Used for rotary control of components. Passivated stainless steel shaft is ¼″ dia. with one end flattened for attaching to knob control by set screws. Supplied completely assembled with two retaining rings, jam nut with lock washer and nickel plated, brass panel bearing. Fits panels up to 3/16″ thick; mounts in 13/32″ dia. hole.



AP-15350



Cat. No.	Item	"L" Shaft Length

Can be made to order with special nylon bearings.

BUSHING EXTENDERS

Cat. No. AK-5075-1 thru AK-5075-11

Permit staggered mounting of components having ¼″ shafts, behind a panel. Useful in meeting problems of space economy. Supplied in nickel plated brass.

Note:
Extender AK-5075-9 is a locking (collet) type and is supplied by JAN with lock nut.

RELAY SOCKETS with Fixed or Removable Contacts!

Jan's relay sockets are specifically designed for use with plug-in relays . . . in electronic circuit applications which demand quick and easy assembly and maintenance.

Available with dip-solder pin terminals for printed circuit assembly, or solder cup and turret terminals for direct wiring. For applications requiring removable contacts, solderless wire crimp terminations are available for #16, 20, 22, or 24 AWG wire sizes.

A variety of mounting styles are offered including . . . tapped inserts with studs for top chassis mounting; thru hole; or tapped inserts with removable standoffs and screws for mounting on either side of chassis or panel. Unexpected disconnect because of vibration is eliminated by fastening the relay to the socket. Polarization dots and/or index holes (optional) aid in plugging in relay correctly. Socket contact material is spring tempered phosphor bronze gold plate over silver plate. Body material is Diallyl Phthalate, fiberglass filled per MIL-M-19833.

JOLTA SHOCK TEST MACHINES

For Reproducible Impact-Shock Test Pulses

Four Models Engineered to Reproduce the Entire Spectrum of All Significant Impact Shock Waves

Designed for laboratory and production testing of light to medium weight components as well as complete instrumentation. Produced to meet practically all requirements of common Mil. Spec. qualification tests. Each JOLTA is electronically calibrated to certify compliance with test specifications.

JOLTA Bench Model No. 1001 — Produced to meet JAN-S-44 and Mil-Std. 202 (202A). Standard model range 30-120G. Accessory plate springs available for test pulses to 500 G.

JOLTA Bench Model No. M-500 — Produced to meet Mil-T-12679A (Sig. C) and Mil-T-19500A. Standard model range — 200 to 1000 G at 1.0 millisecs. Alternate anvil and pad kits available to order.

JOLTA Floor Model Nos. F-3003-C1, C2, C3 — Designed for high impact shock testing for small and moderate-sized components. Precision-machined magnesium casting utilized for higher shock amplitudes. Typical tests with these units 50 to 5000 G at .2 to 11.0 millisecs. For high impact testing, accessory springs and twin anvil combinations yield impulses of 0.2 millisecs to 5000 G.

SPECIFICATIONS — JOLTA SHOCK TESTERS

Model No.	Carriage Volume	Test Weight	"G" Ranges
1001	4″x4″x5″	0-12 lbs.	25-500
M-500	3″ cube	0-2.0 lbs.	100-1000
F-3003-C-1	5″ cube	0-12 lbs.	50-1500
F-3003-C-2	5″ cube	0-4.0 lbs.	350-5000

For Production Testing, Can Be Automated for Continuous Operation

FEATURES
- Economical
- Simple to Operate
- Rugged
- Uniformly Accurate

Note:
New design allows for quick changeovers of accessories.

SHIELDS

JAN's Magnetic Shields are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN's Magnetic Shields prevent distortion and intensify modulation of the electron beam due to stray magnetic fields. In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN's standard bezels as listed below. See following page for specifications on JAN's Bezel Assemblies.

BEZELS

JAN's Bezels enhance the appearance of the instruments on which they are used. These units are functionally designed to provide OPTIMUM UTILIZATION OF THE C.R.T. SCREEN, as well as safety against tube breakage and danger to operating personnel.

JAN Bezel Assemblies are supplied with a bezel, calibrated graticule, (where applicable) light filter and C.R.T. cushion. Bezels are finished in a smooth dull black non-reflecting surface. These units fit JAN Mu-Metal Shields.

Edge-lit Bezels (E.L.B.A.)**
These Bezels are designed to provide edge lighting of the engraved scale-calibrated graticule by means of pilot lights.

Camera Mount Bezel
These units provide an integral cast mounting flange that fits all standard 3", 5" and 7" C.R.T. cameras.

DISTINCTIVE FEATURES

- Engineered for 2", 3", 4", 5", 7", 8", 10" C.R.T.
- Maximum display area
- Precision engraved, scale-calibrated graticules; standard or to customer's specifications
- Materials and finish to "Mil Spec"
- Heavy buna-S shock cushion
- Models for edge-lighting
- Phosphor-matched light filters
- Non-reflecting matte surfaces
- Rugged camera mounts
- Models for curved and flat-faced C.R.T.

*To Order Specify: (1) frame only; (2) frame with clear window; (3) frame with clear window scribed with a center line.

JAN's molded, black, shock-resistant plastic escutcheons are available in an exceptionally wide variety of different types and sizes. They provide a pleasing window to frame dial plates mounted behind the panel.

Plastic escutcheons are available in the following ways: frame only; frame with clear windows; frame with clear window scribed with a center line.

For especially large working areas, stamped aluminum escutcheons, finished in dull black are available to meet the needs for space economy. Withstands temp. shock −65°C to +80°C. NON INFLAMMABLE.

VIEWING HOODS

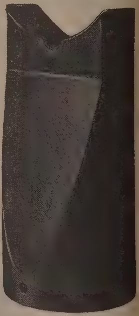
Cat. No. H-465
AND/OR ADAPTER
Can be used as viewing hood, on 2¾" dia. bezels. (#1427; 1428; 1429). Also serves as adapter to permit use of face-fitting neoprene rubber viewing hoods (see above). All aluminum. Has dull black enamel finish.

Cat. No. H-689-1
(5⅝" I.D.)
Black neoprene rubber, contour-molded, fits the shape of face. Keeps out ambient light when viewing scope.
Used with following Jan Bezels: 19636; 19495; 13584; 1465.
No. H-689-2 (4⅞" I.D.)
Used with JAN Bezel #545

Cat. No. H-1008
TO FIT RECTANGULAR BEZELS
Black, contour molded neoprene rubber. Keeps ambient light out, when viewing scope. Fits shape of face. Can be adapted for smaller I.D.'s.
Can be used with JAN Bezel CP-1328P. Can be adapted for #1533-P

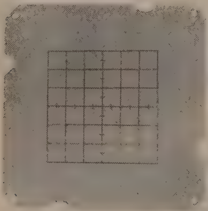
NEW!

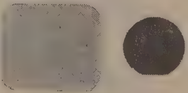
Cat. No. H-1063
Black, contour molded neoprene rubber. Keeps ambient light out, when viewing scope. Fits shape of face. Flanges provided for hand access to PPI settings.



Cat. No. H-1361
Black neoprene rubber, contour-molded, fits the shape of face. Keeps out ambient light when viewing scope.

GRATICULES — FILTERS — CUSHIONS —
Assorted Sizes and Shapes





New! Non-reflective filter material.
Matte 1 side. Grey or Blue.

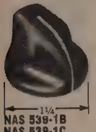
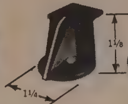
KNOBS

TRANSILLUMINATED POINTER KNOBS



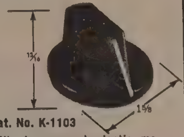
NAS 539-1B
NAS 539-1C
Similar knob also available with 1½″ dia.
Order No. 00278



USAF 61D 404 74
Cat. No. K-977

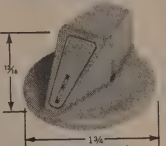
MS25165-1

MS91528



Cat. No. K-1103

Precision molded of JAN's transparent plastic material, to NAS specs, with dull finish. Transilluminated pointers permit easy reading under subdued lighting conditions. For use on instrument panels, switchboards electrical and electronic apparatus.



Cat. No. LM
USED ON LUNAR MODULES!

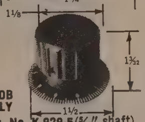
Precision aluminum casting. Adaptable for back lighting. With slip clutch features similar to K1375.

Cat. No. K-936-5

Black phenolic molded knob, with beveled aluminum skirt, black with white contrasting markings. Accurately centered brass insert, for 5/16″ shafts.

Cat. No. K-936-4
(¼″ shaft)

Variations on shaft sizes and markings available in production quantities.



KNOB ONLY
Cat. No. K-929-5 (5/16″ shaft)
Same as above, less skirt.
Cat. No. K-929-4 (¼″ shaft)

MINIATURE KNOBS

PLASTIC

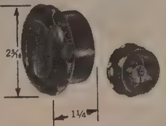
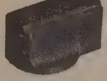
½

AK-1326
For ¼″ shaft



TUNING KNOB
Cat. No. K-243

For 5/16″ shaft. Die cast aluminum. Made to Fed. Spec. QQ-A-591 and MIL-F-14072. Use no-mar clamp Cat. No. 937-8 for mounting (not supplied).



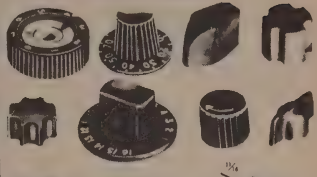
BAR KNOB
Cat. No. K-783

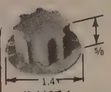
Phenolic molded knob, with metal insert. Set screw at back, for shaft attachment. Finished to specifications.

K1329

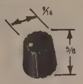
Knurled edge for easy turning. Twin set screws. 23/32″ high x ⅝″ dia. Available with & w/o marking.

STANDARD PLASTIC KNOBS

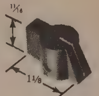




K-1105-1



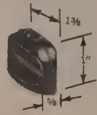
1575289PC-2



47B47299

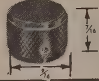
1007267-501

Knobs to satisfy almost any design or demand. Can be produced in any color or finish, either illuminated or non-illuminated. Knobs shown are only part of our stock. Let us quote on your specifications.
Knobs back lighted on special request, only. Special marking by engraving or screening, available to your specifications.



POINTER KNOB
Cat. No. K-706

Molded thermosetting phenolic. Type CFG per MIL-P-14. Designed for square shaft, providing positive action.



KNOB
Cat. No. K-897

Machined knurled edge for easy turning. Has set screw for firm attachment to ¼″ shafts. Height 7/16″ x 9/16″ dia.

NEW!

MOLDED PLASTIC KNOBS WITH METAL INSERTS

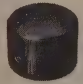
K1280 For 13/64″ shaft. Molded plastic with metal insert 5/16″ high x ⅞″ long x 11/16″ wide.

K1334 For ⅛″ shaft. Molded plastic with metal insert. Twin set screws. ⅝″ high x ¾″ dia. Notch: 3/32″ wide x 3/32″ deep.

K1345 For 3/16″ shaft. Twin set screws. ¾″ high x 7/16″ diameter.

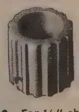
K1349 For 5/32″ shaft with .130 across flat. Twin set screws. 11/16″ high x ¾″ diameter.

K1354 For 5/16″ shaft with .281 across flat. Twin set screws. 45/64″ high x ¾″ diameter.



K1331 For 3/16″ shaft. Molded plastic with metal insert. Twin set screws. ¾″ high x 1 1/64″ dia.

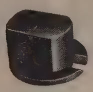
K1335 For 3/32″ D flatted shaft. Molded plastic. 11/32″ high x 21/32″ dia.



K1346 For ¼″ shaft with .222 across flat. Twin set screws. 11/16″ high x 11/16″ diameter.

K1350 For ⅛″ shaft with .107 across D flat. Twin set screws. ⅞″ high x ⅞″ diameter.

K1355 For 5/16″ shafts. Twin set screws. ⅝″ high. Base size 17/32 x 13/32″.



K1332 For 3/16″ shaft. Molded plastic with metal insert. Twin set screws. 21/32″ high x 1⅛″ dia. Notch: ⅛″ wide x 3/16″ deep.

K1343 For 9/32″ shaft with .250 across D flat. Twin set screws. 21/32″ high x ⅞″ diameter.

K1347 For 5/32″ shaft with .130 across flat. Twin set screws. ½″ high x ¾″ diameter.

K1351 For ⅛″ round with .096 across flat. Twin set screws. 9/16″ high x ⅝″ diameter.

K1368 For ¼″ D flatted shaft. Twin set screws. 11/16″ high x 11/16″ diameter.

K1333 For 3/16″ shaft. Molded plastic with metal insert. Twin set screws. ⅝″ high x ¾″ dia.

K1344 For 5/32″ shaft with .130 across flat. Twin set screws. ⅞″ high x ⅞″ diameter.

K1348 For 5/32″ round or 5/32″ D flatted shaft. Twin set screws. ½″ high x ¾″ diameter.

K1352 For ⅛″ shaft with .112 across flat. Twin set screws. 11/16″ high x ½″ diameter.

K1353 For 5/16 — 32 threaded shaft. 59/64″ high x ½″ diameter.

K1398/WD For ⅜″ shaft. Twin set screws. 1 1/16″ high x 2⅜″ diameter. Molded plastic with metal inserts.

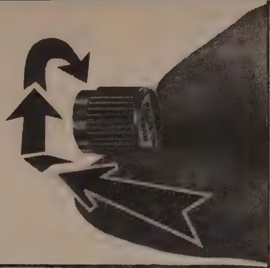
SAFETY KNOBS

"PRESS-TO-TURN" KNOBS

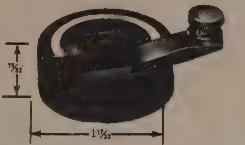
FOR LOW TORQUE APPLICATIONS

Knobs spin freely . . . and **Must Be Pressed-in** while making changes. Developed specifically to prevent inadvertent changing of settings. For basic dimensions, see our "Deluxe Instrument Knobs" (9, 12, 17 and 22 body dia. series). When ordering, be sure to substitute prefix "T" for 9 Series and "Q" for 17 Series, as per typical part numbers.

TIC4GA = .90 Dia./Press-to-Turn/Round/Dial/1/4"/Glossy/Black



Cat. No. MS-91522-1 CRANK KNOB Retractable Spinner



Aluminum Olive Drab. For 1/4" shaft. Other colors and shaft diameters on request. 2 5/8" minimum clearance required with handle in open position.

NEW!

Cat. No. K1622
Retractable Spinner CRANK KNOB
Modified version to replace MS91522. Incorporates brake mechanism to lock control in position.

SLIP-CLUTCH KNOB with Spinners

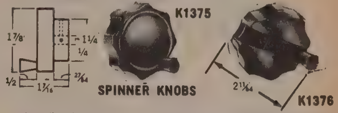
Cat. Nos. K-1375 & K-1376 (For 1/4" Shafts)

For driving devices such as variable capacitors, inductors, potentiometers, etc., the "slip-clutch"* automatically disengages and slips when the pre-determined torque has been exceeded. Knobs are fluted, and are equipped with either fixed or retractable spinner for fast turning. Backlash-free units safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.

*Normally set for 3-6" lbs. Can be modified for other requirements.

Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential.

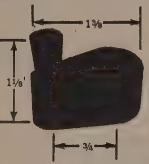
Cat. Nos. K-1275 & 1276 (For 1/4" shafts)
In appearance, these knobs are identical with No. K-1375 and No. K-1376 but without JAN's Slip-Clutch mechanism. Made with single-unit, molded Bakelite-to-metal-insert construction, with two set screws for firm attachment to shafts.



With Fixed or Retractable Spinners

Standard: Glossy finish. (Matte finish avail. on special order)

Cat. No. K-1125
SPINNER KNOB
For Limited Space Applications



For 1/4" shaft. Other shaft diameters on request.

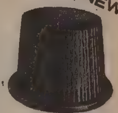
NEW!

Cat. No. K1358
MINIATURE SPINNER KNOB
Nylon. 13/32" High x 3/4" Wide. Spinner section diameter 3/8". Accepts 1/8" shaft or smaller.

NEW!

Cat. No. K-1356
RADIAL LOCK —
Single-turn indicator dial with Radial Lock

NEW!



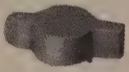
Cat. No. K1357
CLUTCH KNOBS
Straight knurl aluminum knob. Twin set screws. For 1/4" shaft. Other sizes available. 1 3/8" dia. skirt, tapers to 1" dia. at top. Height, 1" Std. Torque 1 to 3 in/lbs. Available from 1/2 in/oz. to 48 in./oz.

BAR-KNOB
Cat. No. K-1325
Precision cast aluminum for 1/4" shafts. Furnished with twin 8-32 set screws for shaft attachment. Provides a 1.0" integrally cast lever arm for heavy-load switching. Finished to specifications.

K1327 For 1/4" shaft. Twin set screws. 1" high x 11/16" body diameter. 1 3/8" overall width.

K1337 Shaft hole .260. Twin set screws. 1 1/8" long x 3/8" high x 1/2" body diameter.

K1342 Knob switch. For 1/4" D flatted shaft. 1 1/2" long x 7/16" high. 1" body dia., 7/16" bar dia.



51A30C82
Aluminum cast bar knob for high torque applications.

K1387 For 5/32" shaft hole. Twin set screws. 1/4" high x 23/32" diameter. Aluminum die-cast.

K1389 For 1/4" shaft. Twin set screws. 27/32" high x 15/16" diameter. Aluminum die-cast.

K1390 For 9/64" shaft. Two set screws. 11/16" high x 9/16" diameter. Aluminum die-cast.

K1391 For 1/8" shaft. Twin set screws. 43/64" high x 5/8" diameter. Aluminum die-cast, with white-filled line.

K1392 For 3/16" shaft. Two set screws. 25/32" high x 11/16" diameter. (Bar is 13/16" long). Aluminum die-cast.

K1394 For 1/8" shaft. Two set screws. 7/8" high x 1/2" diameter. Aluminum die-cast.

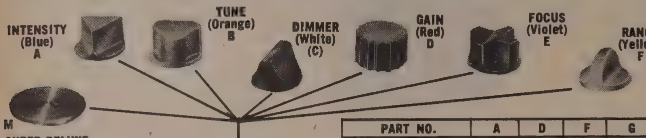
DELUXE INSTRUMENT KNOBS

MEETS PERFORMANCE OF MIL-STD-242D (SHIPS) & MS 91528D

Molded of polycarbonate, these knobs will withstand the extreme environmental conditions of MIL-E-16400. **QPL #3926 — T.R. #J101**

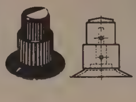
TACTILE SHAPE CONTROL CAPS

Expressly made for both visual and tactile function identification. Each Tactile Knob is produced in the standard recognizable color identified with its configuration. Available in other colors on special order. See column below for applicable tactile shape.



SUPER DELUXE Aluminum Anodized Top (Number as below)

Dual Knobs for Concentric Controls
APPROVED FOR USE MIL-STD-242D & MS-91528C



Molded of polycarbonate plastic, these "piggy-back" knobs are used with dual concentric potentiometers and in other similar applications. Meet performance of military specs above. See diagrams below for dimensions of each knob.

JANSET® KNOBS

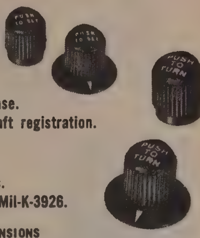
QUALITY
RELIABILITY
ECONOMY

"PUSH-TO-SET" OR "PUSH-TO-TURN"

JANSET® Knobs are precision engineered and are completely integral with its mechanism totally enclosed within the knob body configuration. They protect control settings against accidental change due to shock or vibration. Only when they are depressed can the setting be altered. The knob provides infinite resolution with zero backlash such that registration to indicators (illuminated arrow, dot, cutouts etc.) is maintained throughout a full excursion. To use for existing or new designs JANSET® KNOBS REQUIRE NO MODIFICATION TO PANEL DESIGN.

Available from ½" to 2¼" diameters with ring or dial skirts; with or without indicator markings. Fits all ¼" or ⅜" panel bushings and ⅛" thru ¼" shafts.

FOR TACTILE SHAPE CONTROL CAPS, SEE INFORMATION ON PRECEDING PAGE.



Distinctive Features

- **Knob locks automatically upon release.**
- **Infinite resolution with absolute shaft registration.**
- **Guards critical settings.**
- **Completely integral assembly.**
- **Installation same as standard knobs.**
- **Configuration meets MS-91528 and Mil-K-3926.**

5	266	300

INCREMENTAL KNOBS

Easily provide precise setting to pre-determined positions. Equipment can now be tuned repeatedly with finite exactness to as many as 32 or as few as a single specific position.

Lock positively at exact point required with zero backlash. Once positioned, no further tuning or other adjustment is needed. They guard against shock or vibration and provide a uniquely smooth action, yet permit easy setting to pre-determined, incremental positions by touch, sight or sound. Essentially, their purpose may be compared to a series of multi-position stops.

JANSET Incremental Knobs are totally integral and incorporate all functions within the knob body itself. Achieve major economies in space, weight and cost. Equally suited to existing or new designs since they require no modification to the panel. Installation is the same as any standard knob.

Available in a wide variety of styles, sizes and shapes, and are made to fit ⅛" to ¼" diameter shafts. Configuration meets MS-91528 and MIL-K-3926.

- **Knob locks automatically at exact point, with zero backlash.**

RAYTHEON CONTROL KNOBS

STANDARD SERIES

Raytheon Standard Series Control Knobs feature top quality and lend distinctive customer appeal to your products. All knobs have a common motif, resulting in uniform appearance regardless of function. Standard Series includes hundreds of knobs in many functional shapes, sizes and colors meeting MIL-K-3926 and MS91528. All are molded from high-impact polycarbonate with corrosion-resistant aluminum inserts for maximum strength.

DESIGNER SERIES

Give your product a fine, custom appearance with these Designer Series Knobs. Contrasting with the black bases, the aluminum caps, protected by baked-on epoxy coating, give a sunburst effect which is modern, aesthetically pleasing and implies quality. Knob bases are molded of high quality polycarbonate. Set screws, inserts same as for Standard Series. Colors or other modifications available on special order.

REGENCY SERIES

Regency Series Control Knobs offer the combination of fine quality and a custom appearance at a **modest cost**, with the choice of spun aluminum cupped caps (RS Series) or flat inlaid discs (RSF Series), protected by an epoxy coating. These knobs are particularly suited for use in industrial and instrumentation applications.

400 SERIES

To complement or contrast with the color and design of your products. The 400 Series Knobs are made of durable, high-impact acrylonitrite—butadiene—styrene (ABS) with a lusterless finish. All contain metal bushings and two set screws.

PANELRAMA SERIES

These knobs, molded of durable, high-impact acrylonitrite-butadiene-styrene (ABS), have a black matte finish capped with an epoxy-coated aluminum disk. All contain circular shaft metal inserts with two 6-32 UNC-3A set screws.

PUSH TO ENGAGE

PUSH TO TURN

Designed for applications in which control settings must be maintained under conditions of shock and vibration. The setting can not be changed accidentally, since the knob must be depressed before movement. Zero backlash allows the operator infinite resolution of setting, yet prevents control shaft from rotating when released. Design is identical to Raytheon's standard line of control knobs, allowing uniformity of panel design when used in conjunction with other types.

FOR SPECIFICATIONS SEE PAGE 2•1110

ORDERING INFORMATION

Catalog numbers published here are for stocked items. For other variations, contact factory. The derivation of the catalog numbers for each series is shown below. This does not imply that all combinations are available. Mirror finish is specified on most Standard and Designer Series Catalog numbers listed. Where matte (dull) finish is specified the suffix G is added. Note 400 and Panelrama Series have a matte finish.

Raytheon knobs are available through franchised distributor. See listing of representatives for location of your nearest distributor.

Sample knobs are available for your evaluation, write Raytheon Distributor—Products Operation, Fourth Ave., Burlington, Mass. 01803, Dept. RK.E.

SPECIFICATIONS FOR ALL SERIES

STANDARD SERIES

A. Material and performance per MIL-K-3926
B. Dimensions per MS91528
C. Colors per FED-STD-595. Black No. 37038 (matte); 17038 (mirror). Gray No. 36231 (matte); 16231 (Mirror).
D. Moisture Resistance: 10 days, method 106 of MIL-STD-202.
E. Salt Spray: 48 hours, method 101, Cond. B of MIL-STD-202.
F. Temperature: −65° to +125°C.
G. Torque: 15 pound inches with 4-40 set screws, maximum diameter ¾" 30 lb. inches with 8-32 set screw and larger diameters.
H. Set Screws: Corrosion treated steel with hex heads, cup points. Fluted socket and stainless steel types available.
J. Flammability: self extinguishing.

DESIGNER SERIES

Moisture Resistance: 10 days
Temperature: −65°C to +125°C
Torque: 15 pound inches with 4-40 set screws, maximum diameter ¾", 30 lb. inches with 8-32 set screw and larger diameters.
Set Screws: Corrosion treated steel with hex heads, cup points. Fluted socket and stainless steel types available.

REGENCY SERIES

Molded parts in accordance with MIL-K-3926.
Color per FED-STD-595.
Black number 37038 (MATTE), 10738 (MIRROR).
Flammability: self extinguishing.
Set screws: per FFS200, corrosion-treated steel with hex heads and cup points.

NOTES:

Standard Series

(a) Two set screws are provided
4-40 UNC-3A on all 50 & 70 series and all 1/8" shaft models
8-32 UNC-3A on all others
(b) Custom skirt or body marking available on special order.
(c) Some sizes available from stock in gray or red. Other colors on special order
(d) Reducing bushings available to reduce 1/4" shaft to 1/8" or 3/16" (RB-100=1/8") (RB-200=3/16")

Designer Series

(a) Two set screws are provided:
4-40 UNC-3A on all 70 series and 1/8" shaft models
8-32 UNC-3A on all others

400 and Panelrama Series

(a) Two set screws are provided:
4-40 UNC-3A on all 1/8" shaft models
6-32 UNC-3A on all others

Regency Series

(a) Two set screws are provided:
4-40 UNC-3A on all 1/8" shaft models
8-32 UNC-3A on 1/4" shaft models.

EXPLANATION OF CATALOG DESIGNATIONS FOR CONCENTRIC KNOBS

Concentric knobs bear a dual designation, those at the left of the slash mark describe the upper round knob (1) the series, (2) the diameter, (3) the cap marking if any. The designations to the right of the slash mark describe for the lower concentric knob (1) the diameter, (2) the type, (3) the through shaft hole size and (4) the finish of both upper and lower knobs.

Note: Two set screws are provided:
4-40 UNC-3A on all 1/8" shaft models
8-32 UNC-3A on 1/4" shaft models

CUSTOM CONTROL KNOBS

Increase the sales appeal of your equipment by coordinating its front panel design. Control Knobs don't have to be just functional "add-on" accessories; you can design your knobs to enhance the appearance of panels and instruments. Raytheon has the experience and technical know-how in metalizing, machine tooling, molding, engraving, hot stamping and photo screening. Our product specialist will assist you in your design efforts by selecting the exact color, size, shape and materials to fully satisfy your requirements.

2032	3841001* 3841002	Type 30 A scale Type 30 B scale

Weston VU Meters are available with Type A or Type B scales. The Type A scale stresses the level in VU units for monitoring wire lines. The Type B scale emphasizes percent use of transmitter output and is the standard for broadcast service. The VU meter is designed to read zero VU, or 100%, with 1.228 volts AC applied to the meter and a 3600 ohm series resistor. This represents 4dB above 1 MW in 600 ohms.

** Stock item.*
† When ordering meters, model number must precede catalog number.
△ When ordering meter with optional black painted front change second digit of catalog number "8" to "7."

WESTON INSTRUMENTS, INC. 614 FRELINGHUYSEN AVENUE, NEWARK, N. J. 07114

WESTON® Digital Panel Meters

MODEL 1220 (BIPOLAR)

WESTON
MILLIVOLTS DC

Also available for AC operation as Model 1221

Features

- All digital logic circuitry contained on a single MOS LSI plug-in chip—added reliability
- LED plug-in readout—added reliability
- Instant accuracy—requires no warm-up time
- Requires only 4 sq. in. space
- Complete instrument uses approximately ¾ watt power—conservatively rated to operate in 60°C ambient—added reliability
- Fixed or remote programmed decimal points
- Range change easily accomplished—simplifying stocking requirements
- Input vs readout "slope" changes easily accomplished
- Ruggedized — engineered to meet Military shock and vibration specs. — exceeds requirements of ACA C39.1 specifications for analog panel meters
- Model 1220 weighs less than 4 oz.

SPECIFICATIONS

Full Scale Ranges **Volts:**	**Input impedance:**
0—100 millivolts	>100 megohms
0—1 volt	>100 megohms
0—10 volts	5 megohms
0—100 volts	5 megohms
0—1000 volts	5 megohms
Current:	**Input Impedance:**
0—10 microamps	10 K ohms
0—100 microamps	1 K ohms
0—1 milliamp	100 ohms
0—10 milliamps	10 ohms
0—100 milliamps	1 ohm
Accuracy:	±0.1% of reading ±1 digit @ 25°C ±10°C
Overrange:	100% (reads 1999) except on 1000V range (Stated accuracy applies to full overrange)
Readout:	3½ digits, 7 segment LED
Out-of-Range Indication:	Flashing "1" in most significant digit with blanking of the remaining digits
Operating Temperature Range:	0-60°C (32-140°F)
Temperature Coefficient	±0.01% F.S. ±1 digit (±0.005% reading/°C)
Common Mode Rejection:	Battery operation: >120 dB Line operation: 80 dB
Normal Mode Rejection:	30 dB at 60 Hz
Sampling Rates:	>3 per second
Response Time:	<1.5 seconds
Power Requirements:	**Model 1220:** +5.5 volts DC ±10% (.75 watts) **Model 1221:** 117 volts ±10% or 234 volts ±10% 50 to 400 Hz
Storage Temperature:	—40°C to 70°C
Weight:	Approximately 4 oz

NOTE: Input PC board connectors are not supplied with the DPM. They may be ordered as an accessory under part No. 9790-0273883.

MODEL 1230

WESTON
VOLTS D.C.
-1230

Available in 2½ Digit as Model 1232

Features

- Dual Slope Integration* A/D Converter
- Automatic bipolar operation
- Automatic zeroing
- Reliable TTL Logic and C-MOS analog gates
- 100% overrange (except 1 KV range)
- 2 nA maximum input bias current
- 7.5 conversions per second
- 0.55" Sperry displays
- 80 dB CMRR
- 25 dB NMRR (10 dB on 1 volt range)
- Signal and control terminals:
  - Hold • Print Command • Outrange
  - Polarity

Temperature coefficient:	±100 PPM/°C
Common Mode Rejection:	80 dB with 1000 ohm unbalance at 60 Hz
Storage Temperature:	—40°C to +70°C
Sampling Rate:	7.5 per second
Response Time:	<1.0 seconds
Power:	117 volts ±10%, 50 Hz to 60 Hz, 4.7 watts Can be changed to 230 volts ±10% in field.
Weight:	Approximately 13 oz.

Connector supplied as
an accessory under P/N 9790-0267253

MODEL 1295 (BI-POLAR)

Limited Bi-Polar version Model 1296;
2½ Digit version Model 1297

Features

- Dual slope integration for long term stability
- All digital logic on a single 24-pin LSI MOS chip.
- 100% overrange (except 1000V range)
- Non-Blinking Display
- Automatic bi-polar operation
- Excellent noise rejection characteristics
- Plug-in readouts
  7 segment LED's
- Can be mounted entirely from front of panel
- Takes only 7 sq. in. of panel space
- "Of reading" accuracy
- Physically interchangeable with Weston's present 1230 series

SPECIFICATIONS

Full Scale Ranges: **Volts**	**Input Impedance**
0—100 millivolts	>100 megohms
0—1 volt	>1000 megohms
0—10 volts	5 megohms
0—100 volts	5 megohms
0—1000 volts	5 megohms
Current:	
0—10 microamps	10K
0—100 microamps	1K
0—1 milliamp	100 ohms
0—10 milliamps	10 ohms
0—100 milliamps	1 ohm
Accuracy:	±0 1% of reading, ±1 digit
Overrange:	100% (reads 1999) except on 1000V range Stated accuracy applies to full overrange
Readout:	7 Segment LED's
Out-of-Range Indication:	Flashing "1" in most significant digit with blanking of the remaining digits
Operating Temperature Range:	0-60°C, (32-140° F)
Temperature coefficient:	±0.01% F S. (.1 digit) ±0.005% rdg/° C
Common Mode Rejection:	100 dB with 1000 ohm unbalance at 60 Hz
Normal Mode Rejection:	30 dB at 60 Hz
Sampling Rate:	>3 per second
Response Time:	<1 5 seconds
Power:	117 volts ±10%, 50 Hz to 400 Hz 3 watts Can be changed to 230 volts ±10% in field
Weight:	Approximately 13 oz

NOTE. Input P C. Board Connectors are not supplied with the DPM They may be ordered as an accessory - P/N 9790-0267432

Model 1234

Features

- Dual Slope Integration* A/D Converter
- Automatic bipolar operation
- Reliable TTL Logic
- 3 nA maximum input bias current
- 7.5 conversions per second
- 0.55" Sperry displays
- 80 dB CMRR
- 40 db NMRR
- Signal and control terminals:
  - Hold • Print Command • Outrange
  - Polarity

SPECIFICATIONS

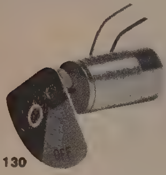
Accuracy:	
Short-term	±0.01% rdg. ±0.025% f.s (23°C, 30 min. warmup)
Long-term	±0.03% rdg. ±0.02% f.s
Linearity Error	<(0.01% rdg. + 0.015% f.s.)
Input Bias Current	3 nanoamperes
A.C. Rejection (NMRR)	40 dB minimum at 60 Hz (standard filter)
Common Mode Rejection	80 dB minimum, 60 Hz and 1000 ohm unbalance
Reading Rate	7.5 per second (15 sec or 30 sec optional)
Step Input Response	2 seconds max for full scale step
A/D Conversion Method	Dual Slope Integration*
Display Type	0.55" seven-segment gas plasma (±19999)
Operating Temperature	0° to 50°C
Storage Temperature	−40° to +70°C
Temp. Coefficient	<(50 ppm rdg. + 0 3 digit)/°C
Outrange Indication	Display blanked except MSD "1" and polarity
Control Outputs:	
Hold	Logic "0" retains most recent data
Convert (option)	1 μSec TTL pulse causes conversion within 10mSec
Status Outputs:	
Print Command	Logic "0" signifies valid output data
Polarity	Logic "1" signifies positive input signal
Overrange	Logic "1" signifies signal beyond 19999 counts
BCD Output (option)	1-2-4-8 parallel, TTL/DTL (2 u.l.)
Decimal Selection	External, by grounding appropriate terminal
Power Input	117 v. ± 10%, 50/60 Hz, 6 watts (available for 100, 220, or 240 volt line)
Size	Approx. 1.75" x 4.0" x 4.25" (see drawing)
Weight	Approx 2 pounds (0.9 kg)

WESTON INSTRUMENTS, INC. 614 FRELINGHUYSEN AVENUE, NEWARK, N. J. 07114

ELECTROMAGNETIC INDICATORS

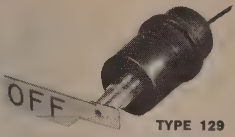
ALLARD INSTRUMENT DIV.
OF AFI

Designed for compact instrument and control panels, Allard miniature electromagnetic indicators provide positive visual signaling, are not subject to burnout, assure high readability in strong incident light. One-piece balanced rotor for dependable performance under shock and vibration. Models for momentary or latching operation, from DC or rectified AC. All models can be supplied to meet particular requirements for operating voltage, type of display and mounting, to commercial or MIL specifications.



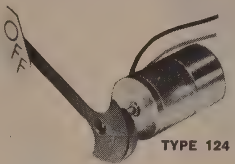
TYPE 130

Tiny indicator, totally enclosed structure. Rotation up to 60°. CW or CCW. For use with plug-on flags. Operates in any position. Case size: 7/16″ O.D. x 25/32″ L.



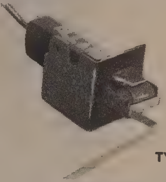
TYPE 129

Short, powerful semaphore indicator for CW or CCW rotation using demountable flag arms. Rotational anges to 60°. Works in any position. 7/16″ diam. x ¾″ long.



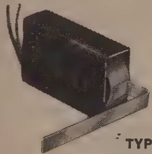
TYPE 124

Miniaturized semaphore indicator with rotation up to 60°. Available with CW or CCW rotation. For use with plug-on flags. Operates in any position. Case size: ⅜″ O.D. x .575″ long.



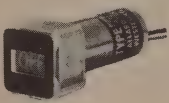
TYPE 219

Relatively inexpensive version of our highly successful instrument and panel mount indicator. Can display legends on the drum face or rotate a flag arm CW or CCW. 2 or 3 position momentary or 2 position latching operation. Indicator drum is .300″ wide x .300″ diam. Total length is 1⅝″.



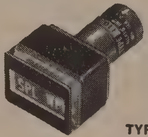
TYPE 109

2 or 3 position slim indicator for narrow locations. Can supply power to rotate a flag arm up to 60° or can display a legend directly on rotor face. CW or CCW for two position operation. .270″ x .562″ x 1″.



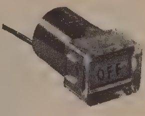
TYPE 108

Small indicator for 2- or 3-position momentary or 2-position latching (memory) indication. Prism-cut plastic lens in head can focus external light on indicator face. Colors or legends as required. 1⅛″ long, ⅜″ dia., 7/16″ square head.



TYPE 110

Extended face indicator, permits display of complete words- or multiple symbols. For 2- or 3-position momentary, or 2-position latching indication. Plastic capped for dust and moisture protection. Length 1¾″, head 1″ by ¾″.



TYPE 120

Tiny broad faced indicator available with 2- or 3-position momentary or 2-position latching indication. Shows colors or legends. Head is 9/16″ wide by 7/16″ high. Body ½″ dia. Overall length 15/16″.

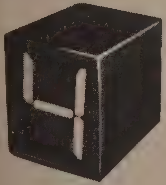
ELECTROMECHANICAL READOUTS

All units illustrated are made under one or more of the following patents:
Re 24943/3,096,594
3,273,270/3,553,619



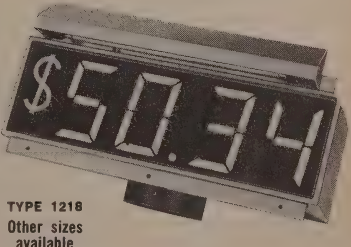
TYPE 202

A wide variety of other sizes available in single and multi-unit packages.

Compact digital indicating modules for instrument, data presentation and other display systems. Seven electromagnetic indicating segments can be operated in any desired combination by low power DC signals. Momentary or latching types. Windings available from 1 to 30 V, 1 15/16″ h. x 1 7/16″ w. x 2¼″ d. Digit size 1½″ h. x 1″ w. Other digit sizes up to 4″ and custom units, with as many lines as necessary, also available. Operating time less than 0.03 sec. Units also supplied with packaged encoders and decoders.

High Visibility!
Inherent Memory!

Complete readout display operating as remote repeater of cash register readings Contains readouts, encoding matrices, pulsing and cycling circuitry and its own power supply. Use of latching (memory) type readouts makes average power consumption negligible. Packaged for all-weather, outdoor use. Uses 4 Type 218 readouts, 4″ high.



TYPE 1218
Other sizes available

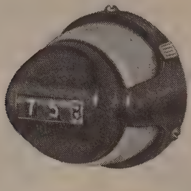
MICRODIAL® COUNTING DIALS

BUNKER RAMO AMPHENOL



1300 Series, Digital

Gives you fast, accurate indication of shaft position up to 1,000 turns. All models (3-digit 10-turn, 4-digit, 100-turn, and 5-digit 1,000-turn) mount directly on shaft to be controlled, eliminating backlash. Speed: up to 6,000 counts per minute.

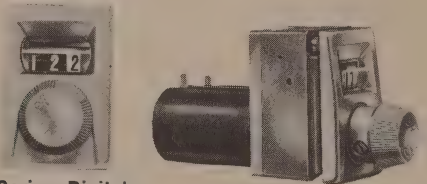
Large, contrasting numerals readable even from angular view because convex windows reduce glare, reflections. Rugged, dust-sealed construction includes Cycolac* counter wheels, Nylatron* GS gear assemblies, knurled aluminum control knobs. Brake optional. Special readouts are also optional. All models conform to military requirements.

*Reg. TM Borg-Warner Corp.

1330 Series, Digital

You get straight-on or angular readout with this illuminated turns-counting Microdial. One-piece lens/window magnifies numerals 1.5x. In exactly 10 turns, unit counts from 000 through 999. Fingertip brake locks settings in place.

This Microdial is sealed against dust yet its snap-on cap makes lamp replacement easy. Standard finishes for color coding: dark or light gray, red, white, and black; other colors and special read outs available on request.



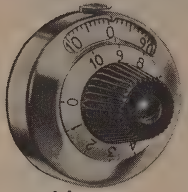
3100 Series, Digital

Remarkably accurate (1000:1 indexing accuracy) miniature 3100 Series dial almost makes a standard circular dial look gigantic by comparison. This Microdial measures only $1\frac{1}{8}$ x $1\frac{21}{32}$ inches and protrudes only $\frac{25}{32}''$ from a panel.

Digits (with illumination optional) are magnified by a convex lens in recessed window. Three-digit, ten-turn dial rotates continuously clockwise or counter clockwise with push-pull fingertip brake to lock settings. This 3100 miniature Microdial will mount on panels from $\frac{1}{16}''$ through $\frac{3}{16}''$ thick.

Standard color: natural brushed aluminum finish.

Amphenol's Dial-Pot assembly saves you time and money . . . eliminates costly mounting and phasing. If you now buy pots and dials separately, but for the same application, Amphenol can prephase and pre-assemble the 3100 dial to any potentiometer at no extra cost. You simply mount the assembly from rear of panel and wire into your circuit.



1320 Series, Concentric

The 1320 series is a $1\frac{3}{4}$ inch diameter 10 turn concentric scale dial with extra large numerals and a wide variety of color combinations including gloss and dull black, satin chrome, and bright chrome. Incorporating Amphenol's exclusive continuous inner dial movement, the 1320 is offered with or without brake. This dial is a rugged, long lasting, highly accurate unit which will meet your most demanding requirements.

DFD Series, Digital

- **250 PPM Reading Accuracy.**
- **High-Density Packaging — Up to 72 Per Sq. Foot!**

The DFD is a precision mechanism that provides a direct manual drive for a panel-mounted ten-turn potentiometer and an associated 3-digit readout that registers the drive-shaft rotation in turns, to three significant figures, a vernier wheel providing four graduations intermediate between adjacent digits on the least significant digit counter wheel permits interpolating to 250 parts per million, or less — fully compatible with the resolution and linearity of the average ten-turn precision potentiometer.

The entire assembly is less than one inch wide and less than two inches high, making it feasible to mount up to 72 controls per square foot of panel space, yet the digital display is comfortably readable at all times. It is not hidden by the operator's hand during adjustment and is equipped with a magnifying window that significantly enlarges the numerals and vernier scale for easy viewing from all positions.

Special Options

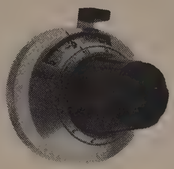
Amphenol, with the broadest and most versatile concentric scale and digital dial lines in the industry, offers you more than standard units. An example is the 1300 and 1330 series digitals which can be modified to give you such special features as index lines, internal illumination and special readouts. Contact your Amphenol area representative for full details on these and other optional features available to solve your design problems.

Microdial® — Trademark Reg. U.S. Patent Office.

MICRODIAL® COUNTING DIALS

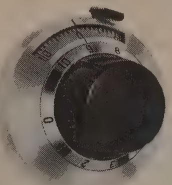
BUNKER RAMO AMPHENOL

Specify AMPHENOL Concentric and Digital Dials for precise potentiometer control



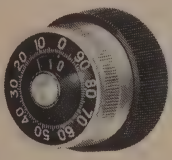
1370 Series, Concentric

Only ⅞″ diameter (1″ with finger brake), this 10-turn Microdial® projects 29/32″ from panel. Don't let the small size of this dial fool you. It has the same silent gear action of the conventional size Amphenol dials. It indicates angular position of potentiometers and multiturn devices of 10 turns and less with 1000:1 indexing accuracy. Inner dial counts turns, outer dial counts hundredths. Locks rigidly onto shaft to eliminate backlash. Epicyclical internal gearing assures readout accuracy. Finger-tip lever offers positive brake action without disturbing critical settings.



1350 Series, Concentric

The 1350, 1 13/16″ diameter, indicates angular position of potentiometers and multiturn devices of ten turns and less with 1000:1 indexing accuracy. Inner dial counts turns, outer dial counts off hundredths. Locks rigidly onto shaft to prevent backlash. Internal gearing is epicyclical type so you always know exact reading. Fingertip brake holds shaft position until reset.



3000 Series, Concentric

Only 1-inch diameter (1 5/32″ with finger brake), this 10-turn Microdial projects 15/16″ from your panel. Without brake, array of these units can be mounted on 1¼″ centers. And the digits are as large and as easy to read as some dials twice the size.

Clear plastic dial face is sealed and angled to prevent reflections. You can color-key dial functions by choosing from 5 standard brake knob colors and different combinations of numeral and background colors.

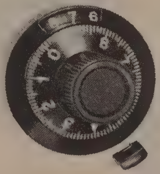
Don't let the small size of this Microdial fool you. It has the same silent gear action of the conventional size Amphenol Microdials.

1380 Series

FEATURES . . .

- **Precision digital dial designed for precision potentiometers up to ten turns — yet exceptionally low cost.**
- **Zinc die cast housing and rear cover for demanding applications.**
- **Indexing accuracy is 1 part in 1,000.**
- **Modern styling and small size.**
- **Easy mounting . . . A single set screw mounts dial to potentiometer shaft.**

Amphenol's new 1380 Series miniature digital dial is available in a black finish model 1381 or a fine black-grey hammer finish model 1385. The 1380 accepts a ¼″ shaft diameter and modification for a ⅛″ shaft diameter is available as a special option. Fingertip brake assures maintenance of critical dial settings. And the 1380 offers you ultra-modern styling to compliment any panel layout.



DFA Series, Concentric

- **1 Part in 1000 Reading Accuracy.**
- **Up to 99 Dials Per Square Foot of Panel Space!**
- **Satin Chrome on Black Finish.**

The DFA is an excellent answer to the need for a precision setting and indicating device for use with multi-turn potentiometers, particularly in control-console and computer applications, where the multiplicity of control elements is a significant factor in the total investment, and panel space is often at a premium.

The dial control knob couples directly to the potentiometer shaft, hence there is no backlash in the control of the actual resistance setting. A single numeral in the window above the knob indicates the number of completed turns of the shaft, and the graduated dial integral with the knob indicates in tenths and hundredths the percent of partial turn of the shaft enabling an accuracy in setting of one part per 1000.

Two standard models are available in this control series: The Model DFA-N with satin chrome finish and Model DFA-NB with white numbers on black finish. They feature constant torque that allows easy adjustment, yet maintain settings under conditions of extreme vibration. Both models include a flip-lock lever that applies 25 inch-ounces of torque against accidental displacement, in the locked position, yet allows high-speed rotation and setting when unlocked. The units are only 1.06 inches wide, with a body height of 1.25 inches (1.63 inches including lock lever) enabling grouping of miniature ten-turn potentiometers in control banks of up to 99 elements per square foot of panel space.

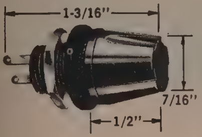
Lamp Holders for Replaceable Lamps   Polycarbonate Lens Red/Amber/Green/Blue/Clear

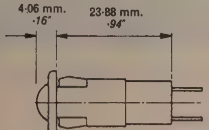
SL60/L111

Lens Colors: Trans/Red/Green/Amber/Blue/Clear
Replaceable Midget Screw
Base Lamp T1-3/4 can be supplied 6V, 12V, 24V
Mtg hole dia .375"
Solder Terminals



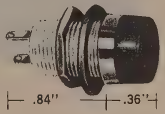
SL61/B

Lens Colors: Trans/Red/Green/Amber/Blue/Clear
Replaceable Midget Screw
Base Lamp T1-3/4 can be supplied 6V, 12V, 24V
Mtg hole dia .375"
Solder Terminals



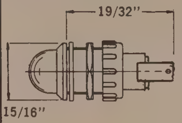
SL62

Lens Colors: Red/Green/Amber/Blue/Clear
Replaceable Midget Flange
Base Lamp T1-3/4 can be supplied 6V, 14V, 28V
Chrome bezel is "live" but insulated from panel
.50" dia mtg hole



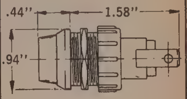
SL93/C

Chrome Bezel and Bushing
Can be supplied with replaceable T3-1/4 lamps, 6, 14, 28V
.750" dia mtg hole
.250" Tab Terminals
7/16" max panel acceptance
Colors: Transparent/Red/Green/Blue/Amber/Clear



SL392/C

All-Nylon, insulated; chrome bezel.
Can be supplied with replaceable T3-1/4 lamps, 6, 14, 28V
.375" dia mtg hole
.250 Tab Terminals
.250" max panel acceptance



Neon 125V and Low Voltage Versions

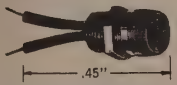
Add to Part Number Voltage required. Ex. SL267/B/125V, SL267/B/28V

Colors Red/Amber/Clear and Green on some types

Standard terminals are .250 tabs or 6-inch leads

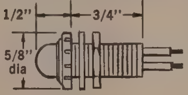
SL40 SL41 SL42

SL40 12/14V .04A .10K hours life
SL41/WL 125V Neon 10K hours life
SL42 LED Min Volt 1.6 Min Curr .02A

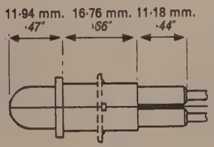


SL78

For 125V operation; built-in resistor;
Red/Amber/Green
All-insulated; nylon barrel;
8" leads; .375" dia mtg hole
21/32" max panel acceptance



SL168/C



.375 dia Mtg. Hole

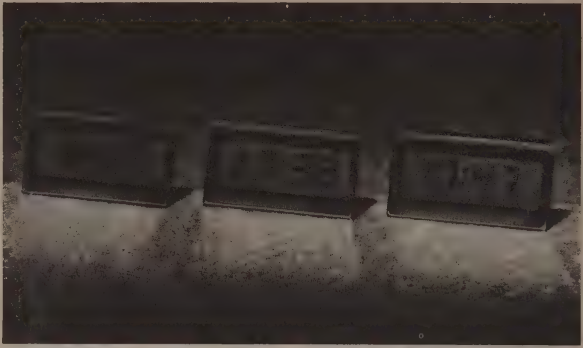
LIQUID CRYSTAL DISPLAYS

Beckman Series 701, 702 and 703 Liquid Crystal Displays (LCD's) are field effect displays specifically designed for electronic digital watch module applications. Series 701 and 703 provide standardized mechanical configurations and electrical specifications for 12 hour (3-1/2 digit) applications and Series 702 provides a 24 hour display capability. Significant features include:

- 1.0 µW typical average power consumption.
- 3 volt and 6 volt standard models in all series.
- CMOS compatible drive characteristics.
- Transmissive designs for back lighting and reflective designs for ambient lighting in all series.
- Excellent readability in high ambient lighting conditions.
- High stability, moisture insensitive liquid crystal materials.



Series 701, 702 and 703

PERFORMANCE SPECIFICATIONS

Parameters Unless otherwise specified T_A = +25°C and test voltages are 32 Hz square wave, 3.0 ±0.1V_{rms} or 7.0 ±0.1V_{rms}		Series 701/702/703						
		R3 & T3			R6 & T6			
		Min.	Typ.	Max.	Min.	Typ.	Max.	Units
Operating Voltage		2.8	3.0	3.2	6.0	7.0	8.0	V_{rms}
DC drive component allowable				25			25	mV

Operating temperature range (Note 3)		0		+50	0		+50	°C
Storage temperature range (Note 3)		−20		+60	−20		+60	°C

Note 1: The limits shown avoid flicker below 25 Hz and increased power consumption above 100Hz.
Note 2: Time is measured from initial change of state of drive voltage to 90% change in visual state.
Note 3: Extended storage at high temperatures listed may cause polarizer degradation.

CUSTOM CAPABILITY

Variations of standard designs are readily available on a custom basis for any application where low power displays are required (hand held on portable test instruments, calculators, etc.), including:

- Special font styles
- Different background reflectors or polarizers
- Special configurations and sizes
- Other display thicknesses
- Other threshold voltage materials
- Different terminal assignments

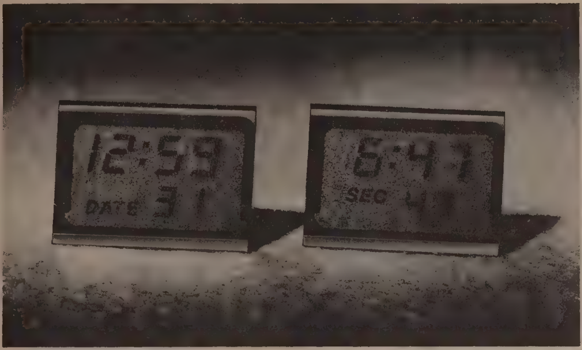
LIQUID CRYSTAL DISPLAYS



Series 705

Beckman Series 705 Liquid Crystal Displays (LCDs) are field effect displays specifically designed for electronic digital watch module applications. Series 705 LCDs provide a continuous 3-1/2 digit display of hours and minutes and also continuously display either seconds or the date as shown above. The word DATE or SEC and the appropriate corresponding digits are typically selected by a pushbutton which will alternately switch the display from one continuous presentation mode to the other. Features include:

- 1.0 µW typical average power consumption.
- 3 volt and 6 volt standard models.
- CMOS compatible drive characteristics.
- Transmissive designs for back lighting and reflective designs for ambient lighting.
- Excellent readability in high ambient lighting conditions.
- High stability, moisture insensitive liquid crystal materials.

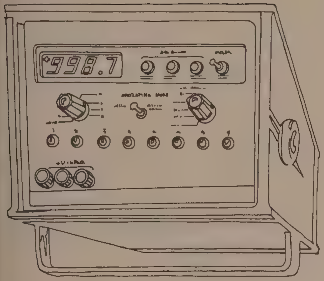
Beckman®

Display Features



Beckman continues to significantly advance display designs and application technology with the introduction of new and improved devices. Beckman has consolidated their position as a display manufacturer and is established as a leader in the field of planar gas-discharge display technology. Beckman's position in the marketplace is the result of providing devices which represent some of the most *readable* and *reliable* displays available today. Furthermore, their characteristics of low power consumption, low cost and versatility make them ideally suited for virtually any application.

Application and Use

Applications in which Beckman displays can be used are virtually unlimited. Any system or unit that requires a displayed information readout, will be enhanced by the use of Beckman displays. These devices are being used in a wide range of commercial and consumer products, as well as industrial and military applications. Manufacturers are finding that Beckman displays are a cost-effective means by which to improve sales, since they provide the end product with improved readability, reliability and overall appearance.

Readability

Beckman displays produce a brilliant, easily read orange neon glow. This color, which is well within the visual sensitivity spectrum of the human eye, makes the reading of a Beckman display a much less eye fatiguing action than other types or colors of displays presently available in today's marketplace. By comparison, the reading of red monochromatic colored displays can cause eye strain since this color is outside the optimum visual spectrum. Each display is illuminated against a stark black background, thus making it fully readable in any high ambient light condition, including direct sunlight. In addition, that flat planar design allows 130 degree viewing.

Power

Beckman displays use less power than most other display technologies available today. In contrast, a typical 0.27 inch light emitting diode (LED) display requires approximately 0.680 watts per digit, while a Beckman 0.33 inch display requires an average of only 0.200 watts per digit — less than half. Similar comparisons may be made with other gas discharge devices as well. This low power consumption is another good reason for specifying Beckman displays, especially when available power is limited or battery operation is required.

Versatility

Beckman displays are available in four convenient character heights — 0.33, 0.50, 0.55 and 1.0 inches. The small 0.33 inch characters are easily legible to 20 feet while the larger half-inch characters are legible to 40 feet and beyond. Beckman displays with the 0.33 and 0.55 character height are available in 1½-, 2-, 2½- and 3-digit envelopes that can be horizontally stacked in any configuration while maintaining uniform character spacing.

As a further endorsement of Beckman versatility, the 0.55 inch character displays are available in module form for the user who does not wish to design a complete display interface. The modules can be mounted in any digit combination and all module configurations are equipped with complete electronics.

Cost

Beckman displays are priced to make them attractive for any application from desk calculators and test instruments to process controls and consumer products. The prices of Beckman displays are a reality now and not a prediction for sometime in the future.

Reliability

All Beckman displays have a 10-year service life. Construction is rugged and compact to ensure total environmental and mechanical reliability in the most demanding application. Beckman's quality control procedures ensure that all shipments are fully tested and that each device meets all published specifications, thus eliminating the bulk of infant mortality in the working design.

Accessories

Beckman offers a full line of related accessories, providing the design engineer with convenience of application and ease of implementation. These accessories include monolithic TTL/DTL compatible decode/drivers, connectors, a 16-position multiplex board, voltage converters, and pin straighteners.

FEATURES	SP-330 SERIES	SP-350 SERIES
Character Height	0.330 inch/8,38 mm	0.550 inch/13,97 mm
Color	Orange (Neon Glow)	Orange (Neon Glow)
Brightness	210 foot lamberts at typical current	210 foot lamberts at typical current
Viewing Angle	130 degrees	130 degrees
Viewing Distance	20 feet/6,10 meters	40 feet/12,20 meters
Life Expectancy	>10 years	>10 years

The SP-330 and SP-350 Series Displays are designed for interfacing with MOS/LSI and are recommended for use in all dc or multiplexed applications, with or without suppressed (blanked) zeros. The displays can be quickly, easily read even in direct sunlight. Continuous, "no gap" characters make the displays most attractive to users. A keep-alive cathode provides an internal ion source that reduces reionization time to less than 30 microseconds, allows zero suppression, and improves the operation of the display in dark environments and at low temperatures. Units are horizontally stackable in any combination with uniform centerline spacing.

Beckman®

SP-101 Display

DC CHARACTERISTICS

	MIN	TYP	MAX
Display Supply Voltage[1]	160 Vdc	180 Vdc	Note 2
Anode-to-Cathode Voltage Drop ('segment b = 700 μa)		135 Vdc	
Cathode Current — Per Segment[3,4]	350 μa	700 μa	1000 μa
Cathode Current — Decimal Point	100 μa	200 μa	300 μa
Cathode Current — Comma (decimal point included)	200 μa	400 μa	600 μa
Cathode Current — Each Colon Segment[5]	50 μa	100 μa	150 μa
Cathode Current — Keep-Alive	15 μa	75 μa	—
Power Dissipation (With All Segments Lighted @ 700 μa Typical)[4]		725 mW	
Operating Temperature	0°C		70°C
Storage Temperature	−55°C		125°C

MULTIPLEX CHARACTERISTICS

	MIN	TYP	MAX
Anode On Time[6,7]	80 μsec	400 μsec	—
Refresh Period			Note 6
Display Supply Voltage	160 Vdc	180 Vdc	Note 2
Anode Voltage Swing	30 Vdc	45 Vdc	90 Vdc
Cathode Voltage Swing	30 Vdc[8]	50 Vdc	120 Vdc
Cathode Bias Voltage ("ON" Anode to "OFF" Cathode Voltage)[9]	90 Vdc	110 Vdc	120 Vdc

NOTES

1. The minimum recommended supply voltage required to ionize the display is 160 volts DC. After the display has ionized, the voltage drop is approximately 135 volts. Typical cathode current of 700 μa is assumed.
2. Display supply voltage (including ripple) should not exceed 200 Vdc when display is used with DD-700 or DD-702 decoder/driver. Higher display supply voltages are acceptable when the drive device breakdown exceeds 80 volts DC.
3. All segment currents are ratioed to b segment.

a, d, f, and g Current Ratio	1.00
c Current Ratio	1.25
e Current Ratio	1.20

4. The lowest current for even glow on the largest segment is 350 μa. Currents up to 1.5 times the typical current may be used, however, life expectancy may be reduced by operation at excessively higher currents. For multiplexed (time shared) operation segment currents may be increased to 2.8 mA with 0.25 or smaller duty cycle.
5. To ensure uniform operation of the two colon cathodes, it is recommended that each cathode have its own current limiting device (resistor or current sink). The current listed is the current required for each colon segment.
6. Keep-alive is recommended in all multiplexed applications. Three (3) milliseconds is maximum refresh period without keep-alive. Ten (10) milliseconds is typical with keep-alive.
7. No anode or cathode blanking is required for the display to perform properly, however, some blanking may be advantageous to eliminate time overlap of signals due to circuit characters.
8. Under specific conditions, Cathode Voltage Swings of as low as 30 volts are acceptable.
9. The combination of Cathode Bias Voltage and Cathode Voltage Swing must be within recommended display supply voltage.

The SP-101 is a planar, neon gas discharge display similar to the Beckman SP-300 series alphanumeric product family. It is intended to fill the need for display readability at distances greater than 40 feet/12 meters.

The SP-101 is recommended for either DC or multiplexed applications, with or without suppressed zeroes. The display can be quickly and easily read even in direct sunlight. Continuous, "no gap" characters make the display most attractive to users.

A keep-alive cathode provides an internal ion source that reduces reionization time to less than 30 micro-seconds. This enhances dynamic response and improves multiplex, low temperature and dark ambient performance. The units may be evenly or randomly spaced to build any display field desired.

Color	Orange (Neon Glow)	Orange (Neon Glow)
Brightness	200 foot lamberts at typical current	200 foot lamberts at typical current
Viewing Angle	130 degrees	130 degrees
Viewing Distance	40 feet/12,20 meters	40 feet/12,20 meters
Life Expectancy	>10 years	>10 years

NOTES: (Apply to both SP-100 & SP-300 Series)

1. The minimum recommended voltage required to ionize the display is 160 Volts dc. After ionization, the voltage drop across the display is approximately 135 Volts. Typical cathode current of 180 µA is assumed for the SP-330 Series, 300 µA for the SP-151 Series and 330 µA for the SP-350 Series.
2. Display supply voltage (including ripple) should not exceed 200 Vdc when display is used with DD-700 or DD-702 Decoder/Driver. Higher display supply voltages are acceptable when devices having a higher breakdown voltage are used. Current must be limited as specified.
3. Lighted cathodes on all digits with independent current limiting. For bussed cathodes (multiplexed operation), 90 Volts is permissible.
4. The lowest current for an even glow on segment b (reference segment) is 125 µA for the SP-151, 130 µA for the SP-152, 70 µA for the SP-330 Series, and 130 µA for the SP-350 Series. Currents up to 1.5 times the typical current may be used, however, life expectancy may be reduced by dc operation above the maximum current limit. For multiplexed operation, segment currents may be increased to 4 times typical dc rating, assuming a 0.25 or smaller duty cycle.
5. Anode On Time assumes typical keep-alive current and typical anode supply voltage.
6. Specified blanking time assumes 520 µA typical segment current for the SP-330 Series and 990 µA typical segment current for the SP-350 Series with 180 Vdc supply voltage. Blanking requirements are strongly dependent upon the mode of multiplex operation and upon the segment current used.
7. Three milliseconds is the maximum refresh period without keep-alive. Using keep-alive can extend the acceptable refresh period to 10 milliseconds.
8. The total display voltage (considering cathode bias and cathode swing) must be within the recommended display supply voltage.
9. Under specific conditions, Cathode Voltage Swings of as low as 30 Volts are acceptable.
10. The colons, AM and PM must have same blanking as any other cathode, and are only enabled during their respective digit times.

Beckman Clock Displays are designed for interfacing with MOS/LSI clock chips. They are recommended for use in all dc or multiplexed applications. The displays can be quickly, easily read even in direct sunlight. Continuous, "no gap" characters make the displays most attractive to users. A keep-alive cathode provides an internal ion source that reduces reionization time to less than 30 microseconds, allows zero suppression and improves operation of displays in dark environments and at low temperatures.

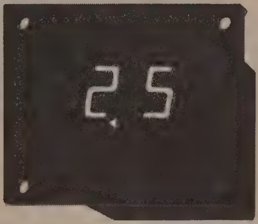
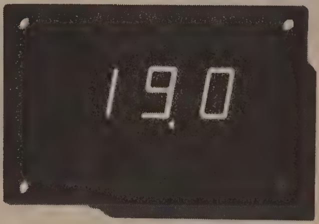
SM-851

SM-852



SM-853



The SM-800 Series modules provide the user with a modularly expandable display, complete electronics, and ready-to-mount convenience. The series is available in 1½-, 2-, 2½-, and 3-digit configurations that can be mounted individually or as multi-digit displays. These expanded displays are achieved by horizontally stacking two or more modules together. The maximum number of digits thus attainable is theoretically unlimited since each module contains its own drive and decode electronics. The SM-855, SM-856, SM-857 and SM-858 modules are supplied with counters in addition to the decoder/drivers and the latch provided in the SM-851, SM-852, SM-853 and SM-854.

The physical design of the package allows for easy mounting of the module(s). The ease of assembly and expansion make Beckman's SM-800 Series an ideal unit for inclusion in low and medium volume display products. Character height is 0.55 inch/13,970mm for all modules.

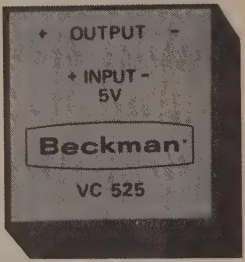
Beckman

Display Accessories

Beckman offers a full line of related accessories, providing the design engineer with convenience of application and ease of implementation. These accessories include:



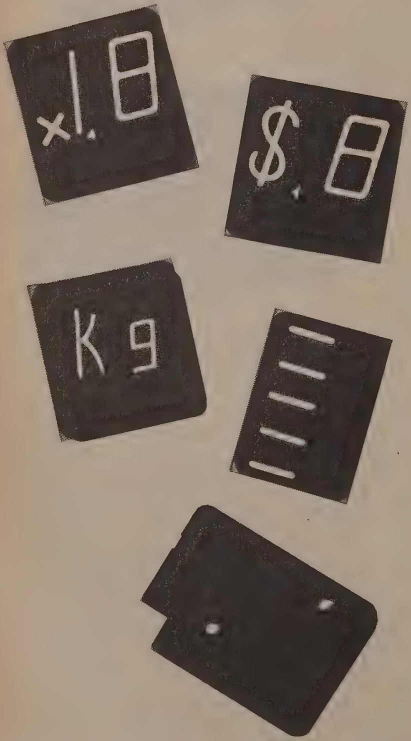
VC-525 VOLTAGE CONVERTERS

For the display user who prefers to buy rather than build a power supply, Beckman offers economically priced dc/dc voltage converters designed specifically to operate with the Beckman Displays. These reliable voltage converters are of compact modular construction that provides an adjustable output: 170 to 210 Volts dc. 180 Volts is recommended for most dc and multiplexed applications. Unit operates from 5 Volt dc TTL/DTL logic supply.

Significant product features include:

- Adjustable output from 170 to 210 Vdc.
- Operates from 5 Volt dc TTL/DTL logic supply (Vcc).
- Compact modular construction
- Rugged, reliable design

Electrical Characteristics	170-Volt Output	210-Volt Output
Input Voltage	5 Vdc (±5%)	5 Vdc (±5%)
Output Voltage Regulation	+25V-10V	±20V
Input Current (5 Vdc)	1.25A max	1.25A max
Load Current	0-15 mA	4-15 mA
Input/Output Isolation	600 Vdc	600 Vdc



SPECIAL CONFIGURATIONS

Beckman has the capability to design and produce displays for unique applications. Alpha readouts such as OHMS, VOLTS, AMPS, MPH, GPM and others can be combined with NUMERIC digits for special displays. You are invited to discuss your custom requirements with the local Beckman sales office.

CS-151 CONNECTORS

These Beckman connectors simplify the mounting of the SP-151. Units are attached with two mounting screws, or soldered directly to a circuit board.

CS-300 CONNECTORS

Designed for use with the SP-300 Series. Units help simplify assembly; they may be attached with screws or soldered directly to a circuit board.

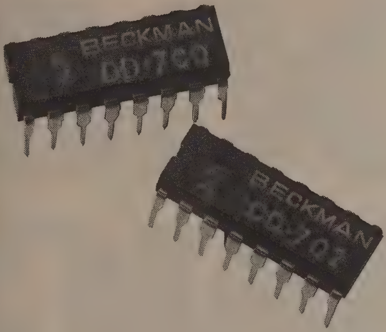
Beckman

Display Products



DD-700 DECODER/DRIVER WITH CURRENT REGULATED OUTPUTS

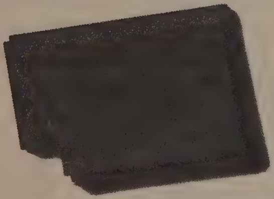
This monolithic integrated circuit accepts TTL/DTL 8-4-2-1 binary coded decimal (BCD) information to direct drive the seven-segment Beckman Display. A blanking input feature on the DD-700 provides unconditional blanking of all outputs while a ripple blanking feature allows suppression of unwanted leading and trailing zeros. The DD-700 has seven regulated, current programmable outputs capable of between 0.18 to 1.5 mA each. Regulation ensures constant brightness display operation under a changing supply voltage situation.

DD-702 BUFFER/DRIVER WITH CURRENT REGULATED OUTPUTS

This device interfaces MOS integrated circuits directly to Beckman SP-100 and SP-300 Series displays. Using the DD-702, calculator and clock chips with seven-segment outputs as well as all types of counter/latch/decoder circuits can be used to direct drive these neon gas discharge displays. The units have a current programmable output of 0.18 to 1.5 mA. Regulation ensures constant brightness display operation under a changing supply voltage situation.

The units feature:

- Output current programmable
- Direct drive for display segments
- BCD input for 7-segment output (DD-700)
- Six inputs decoded to seven outputs (DD-702)
- Output current ratioed for uniform brightness
- Ripple blanking for suppression of unwanted leading or trailing zeros (DD-700)
- Blanking input for unconditional blanking
- Saturated switch operation (external current limited)
- Current regulated outputs
- Hexidecimal decoding (DD-700)



PIN STRAIGHTENERS

Inexpensive pin straighteners are available for each display series. They are useful in realigning pins misaligned through handling, assuring ease of assembly.

SB-300 SUBASSEMBLIES

Beckman SP-300 Series Information Displays are available mounted on circuit boards. These circuit boards can be supplied in configurations of from 8 to 16 digits.

Subassemblies are available with either a lead frame or with the edge board connector. Both of these packages allow the user to mount the display conveniently to a panel cutout and connect them directly into the electronic circuitry by means of standard off-the-shelf connectors. The lead frame configuration can also be connected to the electronic circuitry by flow soldering.

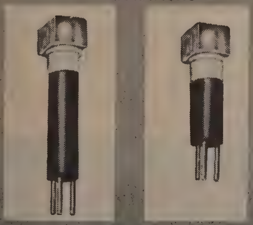
MINI-GLO Series 75004

MINI-GLO subminiature Neon indicator lights

This series of subminiature indicators provided neon bright intensity with the application of 115 VAC power. The complete indicator consists of a MINI-BRITE housing, a standard wire terminal neon lamp type USASI A1K, and a snap-on cap. The housing further incorporates an integral resistor for varying life expectancies. Except for the increased length of the housing, these indicators are compatible and have all of the features of the MINI-BRITE series.

Write for Bulletin No. 1470G

STANDARD OR SPECIAL CONFIGURATIONS



MINI-TRANS Series 75006 (NPN)
75007 (PNP)

MINI-TRANS subminiature Transistorized indicator lights

The MINI-TRANS series incorporates a silicon planar transistor, either NPN or PNP, which will turn on the indicator and provide an extremely bright indication from signal levels as low as 0.30 mA. In addition to standard circuits, specially designed physical and electrical configurations can be furnished to customer specifications. Units can be supplied with a built-in resistor of any standard value. This unique transistorized design capability is ideally suited when extremely low level signals are used for front panel indications, assuring long life and maximum brightness. A wide range of standard incandescent lamps are available to meet your requirements. Except for the increased length of the housing, these indicators are compatible and have all the features of the MINI-BRITE series.

DIALIGHT LED

203 Harrison Place, Brooklyn, N.Y. 11237

Dialight offers you one-stop shopping in LED readout displays. Choose from readout with character height of .270", .300" or .625". Each display is available with or without decoder/driver or in assemblies ready for instant mounting.

Part No.	Display	Type	Character Height	Operating Temperature
745-0004		Overflow Display with Polarity and Decimal	0.270 in.	0 – 70° C
745-0005		5x7 Alphanumeric	0.300 in.	0 – 70° C
745-0006		Seven Segment	0.270 in.	0 – 70° C
745-0007		Hexadecimal (Latch Decoder/Driver)	0.270 in.	0 – 70° C
745-0008		Seven Segment (Latch Decoder/Driver)	0.270 in.	0 – 70° C
745-0009		Seven-Segment (Counter, Latch Decoder/Driver)	0.270 in.	0 – 70° C
730-0004 730-1004		Seven Segment	0.625 in.	0 – 70° C
730-0005 730-1005		Overflow Display with Polarity and Decimal	0.625 in.	0 – 70° C

* I_f peak is the peak current allowed for the stated Pulse width (Pw) and Duty Cycle.

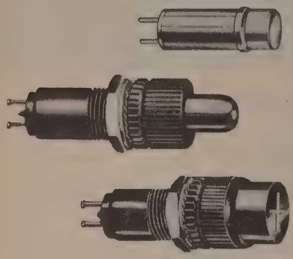
1,500,000 VISUAL INDICATORS

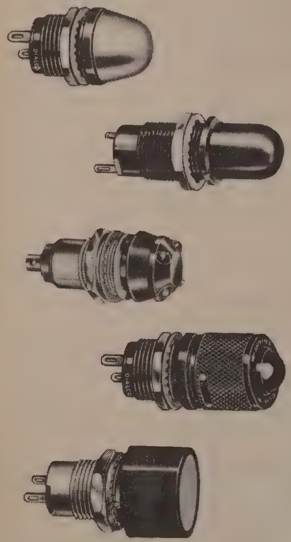
INDICATOR LIGHTS, ILLUMINATED SWITCHES, READOUT DISPLAYS



ULTRA-MINIATURE INDICATORS

Meet requirements of MIL-L-3661B. Incandescent, neon and LED. Mount in 3/8" clearance hole.

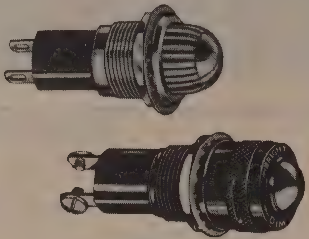
Ask for Catalog UM1200.



SUB-MINIATURE INDICATORS

Incandescent and neon. Mount in 13/32" to 17/32" clearance holes. Meet or exceed environmental requirements of MIL-L-6723 and MIL-L-3661B.

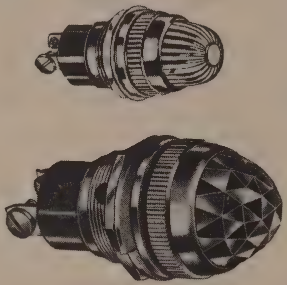
Ask for Catalogs L-157, L-158, L-178.



MINIATURE AND LARGE INDICATORS

Incandescent and neon. Miniature units mount in 9/16" or 11/16" clearance holes, large units in 1" or 1 3/16" hole. Wide choice of cap shapes and colors, also caps with mechanical dimming feature.

Ask for Catalog L-161.



OIL-TIGHT INDICATORS

Incandescent and neon. Mount in 11/16", 1" or 1 3/16" clearance holes. For heavy duty.

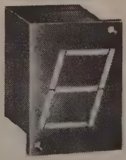
Ask for Catalog L-200.

DIALCO
DIAL
DIAL

LIGHTED SWITCHES AND MATCHING INDICATORS

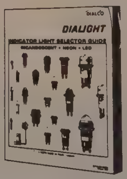
Low-profile snap-in switches and standard mounting switches. Momentary non-snap, snap or alternate switch actions. Ratings up to 5 A. Cap sizes include 1/2" 5/8" and 3/4" round or square; 3/4" x 1" rectangle.

Ask for Catalog L-210.



SINGLE-PLANE READOUTS

Incandescent and neon — 5 to 170 volts. 3/4" or 1" characters. Display 10 numbers and 10 letters. Compatible caption models.



Send for FREE Indicator Light Product Selector Guide Catalog SG730.

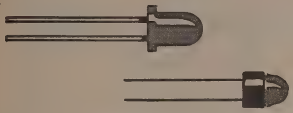
TO CHOOSE FROM DIALCO®

. . . AND INDUSTRY'S BROADEST LINE OF LED DISPLAY DEVICES



DIODE-LITE™ LIGHT SOURCES

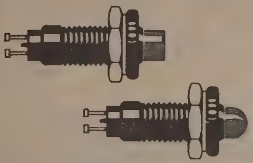
RED • GREEN • YELLOW

Diffusing particles in plastic encapsulant provide large, soft light source for panel light, status indicator and A/N display applications.

INDICATOR LIGHT CARTRIDGES

RED • GREEN • YELLOW

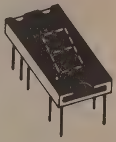
IC-compatible ultra-miniature cartridges with DIODE-LITE light source are interchangeable with incandescent types using DC power source.



INDICATOR LIGHT ASSEMBLIES

RED • GREEN • YELLOW

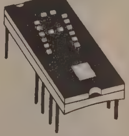
Cartridge with DIODE-LITE in housing with mounting hardware ready for installation. Interchangeable with DIALCO ultra-miniature incandescent types.



.270″ CHARACTER

PLUS-MINUS ONE, .270″ CHARACTER

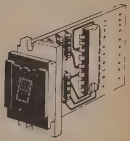
ALPHA-NUMERIC .300″ CHARACTER



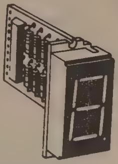
.270″ HEXADECIMAL

READOUT MODULES

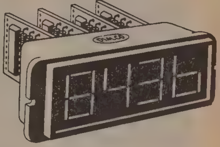
Character heights from .270″ to .625″. Dot, dot matrix and segmented formats for both numeric and full alpha-numeric displays. Wide angle (140°) viewing. IC compatible.



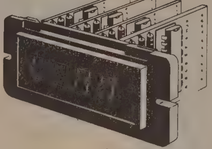
.270″ CHARACTER



.625″ CHARACTER



.625″ CHARACTER



.270″ or .300″ CHARACTERS

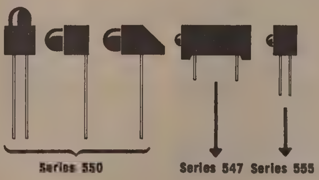
READOUT PACKAGES AND ASSEMBLIES

Single-digit packages in character heights from .270″ to .625″ include decoder/driver and resistors mounted on PC board. Bezel assemblies ready for panel mounting available with up to 10 display packages.

ASK FOR LED PRODUCT SELECTOR GUIDE

LED LOGIC-STATE FAULT INDICATORS

RED • GREEN • YELLOW



550 series indicators, with/without built-in series resistors. For use as electronic circuit fault finders, as indicators or in binary data displays.

547 series indicators, with built-in series resistor, permit dense packaging — 10 units to the inch. Pin spacing is compatible with DIP sockets.

555 series indicators have built-in series resistor, are IC compatible, and can be p-c board mounted 10 units to the inch.

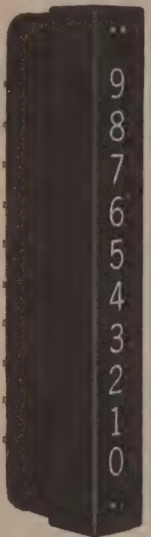
d² display devices

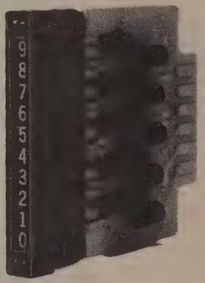
DIGISTRIP front relampable DIGITAL DISPLAYS

For a wide range of console and instrument display applications. Can be mounted horizontally or vertically, directly on p.c. boards, or ganged for high-density readout.

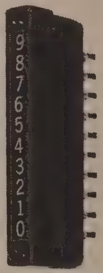
All Digistrip models are available with standard 0-9 legend, or with custom read-out information.



Digistrip II
3″ legend area.



Digistrip I with high-gain transistor drivers on integral printed circuit board.



Digistrip I
1½″ legend area.

MINIATURE T-1 INDICATOR LIGHTS

Designed to provide the brightest light in the least space. Available off-the-shelf, or designed to your application.

QUICK-LENS

Front-relampable miniature indicator light with built in light reflector for maximum brightness, even in high ambient light.

MINI-LENS

Front relampable, micro-miniature indicator light, featuring minimum panel spacing. Can be RFI shielded. Threaded body can mount directly to panel.

FLUSH-LENS

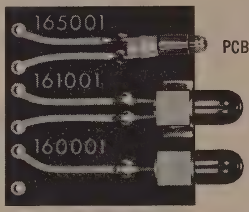
For panel mounting without protrusion. Available with RFI shield. Unit is relampable from rear of panel. No solder connections required.

TRANS-LENS

TDML

Each front relampable, with high-gain transistor driver on compact, integral p.c. board. Minimum depth behind panel. Both available in "bare board" configuration for customer to install own components. Trans-Lens is transistor-driven version of Quick-Lens; TDML is transistor-driven version of Mini-Lens.

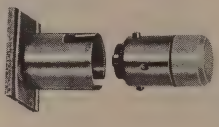
P.C. BOARD INDICATORS



PCB LIGHT

SINGLE-SIDED BOARDS
DOUBLE-SIDED BOARDS

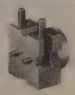
TEST LENS



ADAPTER LENS AND SOCKET

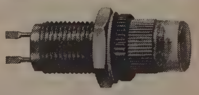
Midget T-1¾ flanged base lamp adaptor used with T-3¼ printed circuit mounted socket. Furnished with or without integral color filter.

T-1 UNBASED



T-1¾ BI-PIN

Basic sockets for custom designed lamp holders or p.c. board mounting used as lighting chassis for back lighted display. Also available in side mounting.



TWIST-LENS

Quick-change lens, available in clear or colors. Waterproof and RFI shielded units available. Uses T-1¾ Bi-Pin base lamp for high brightness.

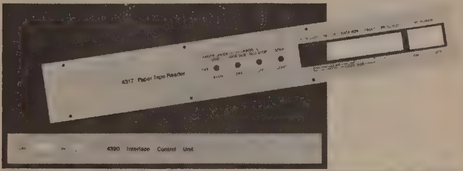
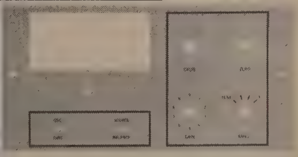
POLYCARBONATE AND ACRYLIC LAMINATES

Offered in dead front as noted above for polyester laminates. Thickness ranges from .020″ to .250″. Used for LED devices as well as incandescent lamps. All laminates are provided with or without pressure sensitive adhesive backing, depending upon application. All laminates feature color matching to FED STD 595, Pantone, or customer supplied color chips.



4317 Paper Tape Reader
4390 Interface Control Unit



NON-ILLUMINATED LAMINATES

Supplied on .010″ adhesive backed polyester film non-illuminated laminates are used to replace conventional painting and printing of metal panels. Screen printing of graphics is sub-surface to protect markings from being scratched off. Holes for switches, knobs, etc. are steel rule die cut. Background color is matched to customer requirements.

There was a time when you could easily select the small lamp you needed from a limited number of incandescent types. But times change. Today, small-lamp selection requires a complex, precise sorting process through an almost endless array of styles, types, and sizes. The incandescents have broadened and subdivided into miniature and sub-miniature classes. And, to complicate things, there are neon-glow lamps in a range of colors, and light-emitting diodes have made the scene.

What used to be a relatively simple matter has become an all-important design consideration — which lamp is the right lamp? Right in terms of function? light output? available space? power requirements? life expectancy? color? environment? and **cost?**

How to be RIGHT

Being "right" in lamp selection first requires a systematic matching of design and function requirements to available types. This process will identify the most likely lamp candidates.

Second, being "right" requires a detailed analysis of the candidates along with a thorough evaluation of the various lamp design tradeoffs to zero in on the lamp for your specific application.

How to get help

Your local G-E sales specialist will be glad to assist you in all phases of the lamp selection process. But, to help you in the all-important first stage of systematically matching design and function requirements to available lamp types, we've prepared this "mini-guide" to small-lamp selection. For further help, contact one of the GE sales offices listed below. Or write General Electric, Miniature Lamp Products Department 3382E, Nela Park, Cleveland, Ohio 44112.

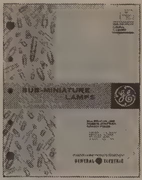
Neon-Glow Lamps	Light Emitting Diodes (visible)
Function indication (switches, indicators). Illumination (panel, edge lighting. Circuit component voltage regulation.	Function indication.
1/4" to 9/16" dia.	1/16" to 1/4" dia.
2.6 mA or less	5 to 25 mA
110 to 220 v	2.5 to 3.1 v
Both(2)	Both
0.003 to 0.018 mscp	0.004 cp(3)
Full 180°	Narrow(3)
Red, amber, green, blue	Red, amber, green
No	Low
−40 to 95°C	Note(4)
Excellent in most environments	Excellent in most environments
100,000 hr. with proper resistor selection	100,000 hr.
4-1/2¢ to 90¢	7¢ to 35¢
Variable light output with series resistor selection. Compatible with some semi-conductors. Low cost. Low power consumption. Excellent shock and vibration resistance.	Long life. Excellent shock and vibration resistance. Low operating voltage & power consumption.

(5) Service life depends on use and environment.

(6) Lamp price depends on base and filament configuration. Special purpose lamps, such as lens end, can cost up to $1.21.

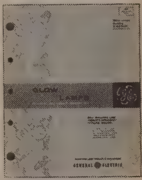
*Lamps up to 9/16" in diameter

You can find a GE miniature lamp for practically every need... in one of these 4 free catalogs.



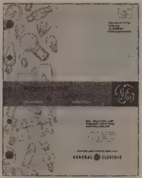
Sub Miniature Lamps: 24 pages. Data covers over 210 sub-miniature lamps. Diameters ¼" and smaller. Average rated voltage 1.3 to 60 Candlepower range from .006 to 15. Lamp life up to 60,000 hours.

Sub-Miniature Lamps (3-6252R1)



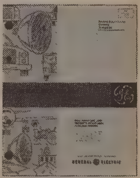
Glow Lamps: 8 pages. Data covers 83 Neon Glow Indicator and Circuit Component lamps. Diameters ranging from ¼" to 1¾". Wire terminal lengths ½", ⅝", ¾" and 15⁄16".

Glow Lamps (3-6254R)



Miniature Lamps: 40 pages. Data covers over 500 miniature lamps ranging up to 20,000 hours average rated life. With a design voltage range of from 1.2 to 55, and candlepower range from .02 to 250. Diameter range from 11⁄32" to 21⁄16".

Miniature Lamps (3-6253R1)



Sealed Beam Lamps: 16 pages. Data covers over 180 Sealed Beam lamps, ranging from 4½" to 8" in diameter with a design voltage range of from 4.0 to 115, and initial candlepower of from 150 to 600,000.

Sealed Beam Lamps (3-6251R1)

GTE SYLVANIA

miniature lamps, sockets & lenses

1. Meet stringent optical system requirements with all-glass, wedge-base halogen lamps featuring precisely located filaments, nearly constant light output over rated life. Other applications: detection systems, photocell activators, medical/dental instruments, aircraft instruments.
2. Reduce inventory with interchangeable cartridge lamps, sockets and lenses. For fast, easy field replacement, choose from a complete voltage range of 7 pilot and 15 indicator cartridge lamps, 10 transparent or translucent color lenses, and standard bi-pin bases that fit all Sylvania assemblies.
3. Fill special application needs with high-candlepower annunciator lamps. Ratings from 6 to 120V, with built-in aluminum reflectors to intensify candlepower, pyrex colored lens caps for unique lighting and signaling effects. Choice of bases: candelabra screws, miniature bayonets, PC-card compatible bi-pins.
4. Simplify multiple mounting with strip sockets that clip to panel, can be cut to any length. Up to 12 sockets on ½" or ¾" centers. Common or separate socket connections, choice of three optional snap-on color caps for the twin light.
5. Get total assembly backup without compromise for all pilot and indicator miniature lamps. Full hardware range includes pilot housing with five interchangeable screw-on lens types, round or rectangular single sockets, twin-light indicator assemblies, even three types of color caps.

For technical information and applications data compiled especially for the engineer, write or call for the 54-page Engineering Design Handbook and Catalog, No. 201.

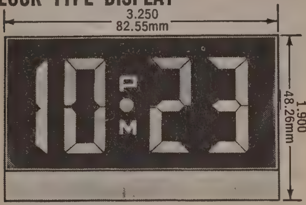
LIQUID CRYSTAL DISPLAYS

Hamlin has "standard" LCD's to fill most digital readout requirements in watches, clocks, calculators, meters or instruments. Displays can be "custom" made to nearly any design. All feature very low power requirements, excellent contrast ratio and long life. Condensed descriptions and specifications are listed below. For further information on these, or if you have special requirements, please consult your local Hamlin representative or distributor.

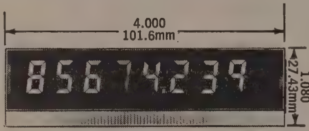
MODEL 3401 3½ DIGIT CLOCK TYPE DISPLAY



Dynamic Scattering, Reflective or Transmissive

Operating Voltage: 15-20 Vac, 15-120Hz. **Power Consumption:** 3.75 mW nominal (all segments energized with 15 volts). **Turn On (Rise) Time:** 150 milliseconds typical. **Turn Off (Decay) Time:** 100 milliseconds typical. **Contrast ratio:** 20:1 typical. **Character Height:** 1.12" (2.80 mm). **Terminal Width:** .050" (5.250mm). **Terminal Spacing:** .100" (2.50 mm) C to C. **Operating Temperature:** 5°C to 55°C. **Storage Temperature:** −20°C to 70°C. **Drawing No.:** D10-3401. **Base Price:** $24.00 reflective, $22.50 transmissive.

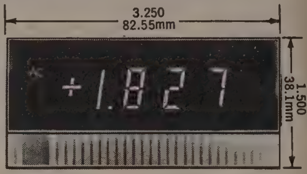
MODEL 3501 8 DIGIT CALCULATOR TYPE DISPLAY



Dynamic Scattering, Reflective or Transmissive

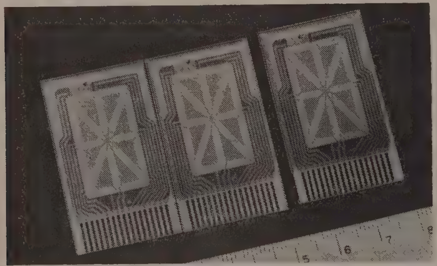
Operating Voltage: 15-20 Vac, 15-120 Hz. **Power Consumption:** 1.50 mW nominal (all segments energized with 15 volts). **Turn On (Rise) Time:** 150 milliseconds typical. **Turn Off (Decay) Time:** 100 milliseconds typical. **Contrast ratio:** 20:1 typical. **Character Height:** .470" (11.750 mm). **Terminal Width:** .025" (.625 mm). **Terminal Spacing:** .050" (1.250 mm). **Operating Temperature:** 5°C to 55°C. **Storage Temperature:** −20°C to 70°C. **Drawing No.:** D10-3501. **Base Price:** $22.50 reflective, $21.50 transmissive.

MODEL 3601 3½ DIGIT INSTRUMENT TYPE DISPLAY



Dynamic Scattering, Reflective or Transmissive

Operating Voltage: 15-20 Vac, 15-120 Hz. **Power Consumption:** 2.25 mW nominal (all segments energized with 15 volts). **Turn On (Rise) Time:** 150 milliseconds typical. **Turn Off (Decay) Time:** 100 milliseconds typical. **Contrast Ratio:** 20:1 typical. **Character Height:** .600" (15.0 mm). **Terminal Width:** .050". **Terminal Spacing:** .075" (1.875 mm) C to C. **Operating Temperature:** 5°C to 55°C. **Storage Temperature:** −20°C to 70°C. **Drawing No.:** D10-3601. **Base Price:** $21.50 reflective, $21.00 transmissive.



NEW! Alphanumeric Liquid Crystal Displays — 1" High

These 16 segment, dynamic scattering displays can be mounted side by side to form any legend. They are ideal for prototype work or where quantities desired might not meet factory minimum orders. Stocked at authorized distributors for immediate delivery.

Models — 3305-2 Reflective, silver — 3305-3 Transmissive, yellow segments, black background. **Operating Voltage:** 10-30 Vac, 16-150 Hz. **Power Consumption:** 2.25 mW. **Turn On (Rise) Time:** 150 milliseconds typical. **Turn Off (Decay) Time:** 50 milliseconds typical. **Contrast Rates:** Reflective 20:1; Transmissive 15:1. **Operating Temperature:** 5°C to 55°C. **Storage Temperature:** −20°C to 70°C. **Terminal Spacing:** .050" (1.25 mm) (centerline to centerline) **Terminal Width:** .025" (.625 mm). **Character Height:** 1.00" (25. mm). **Character Width:** 0.6" (15. mm). **Base Price:** $14.95 each.

MODEL 3302 3½ DIGIT WATCH TYPE (MEN'S) DISPLAY

Dynamic Scattering, Reflective Silver or Gold

Operating Voltage: 10-30 Vac, 16-150 Hz. **Power Consumption: 30 μW** maximum (all segments energized at 15 Volts). **Operating Temperature:** 5°C to 55°C. **Storage Temperature:** −20°C to 70°. **Turn On (Rise) Time:** 100 milliseconds typical. **Turn Off (Decay) Time:** 150 milliseconds typical. **Contrast Ratio:** 20:1. **Character Height:** .200" (5.0 mm). **Character Width:** .100" (2.50 mm). **Terminal Width:** .043" (1.075 mm). **Segment Width:** .020" (.500 mm). **Terminal Spacing:** .085" (2.125 mm) C to C. **Character Slope:** 5½°. **Base Price:** $25.00.

MODEL 3304 3½ DIGIT WATCH TYPE (MEN'S) DISPLAY

Field Effect

Operating Voltage: 5-20 Vac, 25-32 Hz. **Power Consumption:** 21 μW maximum (all segments energized with 7 volts). **Operating Temperature:** 0-50°C. **Storage Temperature:** −20°C to 55°C. **Turn On (Rise) Time:** 150 milliseconds typical. **Turn Off (Decay) Time:** 300 milliseconds typical. **Contrast Ratio:** 20:1. **Character Height:** .200" (5.0 mm). **Character Width:** .122" (3.050 mm). **Terminal Width:** .039" (.975 mm). **Terminal Spacing:** .070" (1.750 mm) C to C. **Character Slope** 5°. **Base Price:** $25.00.

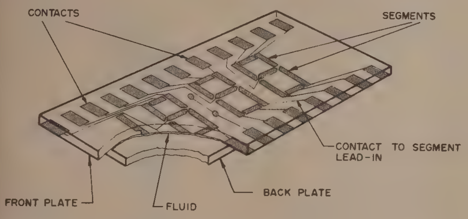
THE CASE FOR LIQUID CRYSTAL DISPLAYS

DYNAMIC SCATTERING OR FIELD EFFECT

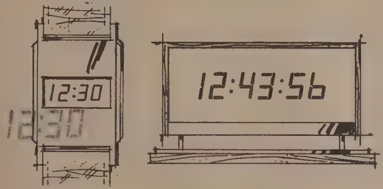
Liquid Crystal Displays; light emitting diodes; incandescent and fluorescent displays and "Nixie" tubes are becoming solidly established in circuit design as the trend to digital readout continues. The design engineer faces an unusually formidable task in determining the type of display most suitable and practical for his product. We make liquid crystal displays — dynamic scattering AND field effect.

The Display of the Future? Our displays are as sandwiches of two glass plates, spaced typically about .0005" apart with a nematic liquid crystal solution between them and hermetically sealed at the perimeters.



How They Work. When the liquid is not electrically excited, its long cigar-shaped molecules are parallel to one another in a position perpendicular to the plates. The liquid appears transparent. When an electric current is applied, ion activity of the molecules leads to turbulence causing the liquid to scatter incident light. Depending on the type of nematic liquid used, either a dynamic scattering or field effect display results.

Dynamic Scattering. We use a nematic liquid crystal solution in our dynamic scattering displays. This nematic liquid crystal is conductive, have negative dielectric anisotropy, and is oriented in either a homeotropic or homogeneous alignment. In either case the liquid is clear in the absence of an electric field. When an electric field is induced, the molecules scatter, giving the visual effect of a frosted piece of glass.



Field Effect. These displays also utilize a nematic liquid crystal but with a different molecular orientation. The molecules are arranged in a helical stack, like a spiral staircase. The liquid is also sandwiched between two polarizers which are at right angles with each other. When current is applied the molecules rotate 90° so that they become perpendicular to the front polarizer. Light that passes through them is not rotated and therefore is absorbed by the rear polarizer. The result is a dark image on a light background. The image also can be reversed — light on dark.

Producing an Image — digital or other — simply requires a conductive surface the shape of the desired image on the front glass plate. Current flowing from the conductive image through the liquid crystal to the common ground back plate causes the liquid to change from clear to a frosted appearance in the current-carrying areas.

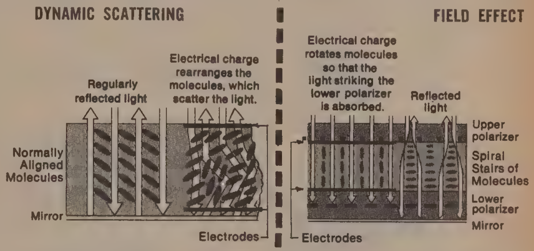
The images almost always are in the form of seven segments formed on the front glass with transparent oxide and each with its own electrical lead. Energizing the proper segments produces the desired numerals. Lead-ins connect the segments to external contacts on the sandwich (display).

Consider the Advantages. Liquid crystal displays have a number of distinct advantages. Simplicity is the reason for several of these. The elements are few and passive — very little can go wrong with an LCD and this means reliability and long life.

Simplicity means low cost too — lower than that of most similar displays. Packaging costs are low because LCD's can be driven directly by MOS and C/MOS circuits. Very narrow character widths are possible and still provide a good viewing angle — 60 degrees in many cases.

Low power consumption makes LCD's a logical choice where power limitations rule other displays out. They do not generate light as do other displays so use no power for that purpose. Watch type field effect LCD's use only 3 μW for example with all segments energized at 7 Volts.

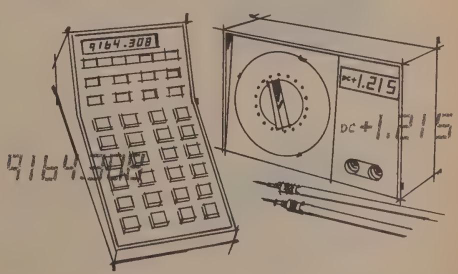
LCD's offer the greatest flexibility of any display type. Several standard displays, dynamic scattering or field effect, are immediately available from Hamlin's stock. Special displays with virtually any type of image can be produced with surprisingly low preparation or "tooling" cost. Because of the LCD's simplicity, lead time on specials is only a matter of weeks.



DYNAMIC SCATTERING
FIELD EFFECT
Regularly reflected light
Electrical charge rearranges the molecules, which scatter the light.
Normally Aligned Molecules
Mirror
Electrodes
Electrical charge rotates molecules so that the light striking the lower polarizer is absorbed.
Reflected light
Upper polarizer
Spiral Stairs of Molecules
Lower polarizer
Mirror
Electrodes

A Few Limitations. LCD's have limitations too. Operating temperature range is one. Liquid crystals slow down and may even cease to function at temperatures below 0°C. Above 50-60°C, crystals go into solution and will not function properly. But extremes do not damage LCD's. Once the temperature returns to normal, operation is automatically resumed.

LCD's are somewhat difficult to read under low ambient light conditions. (Side or back lighting can remedy this.) Visibility under medium to high ambient light conditions is excellent.



Conclusion. In the majority of display applications, MOS and C/MOS compatibility, reliability, flexibility and low power requirements are important considerations. No other display can match the liquid crystal display on these jobs. They could be the display of the future.

And that's the case for the LCD. For specifications, and application data, write Hamlin, Inc., Lake Mills, Wisconsin 53551, (414) 648-2361, for name of nearest representative.

INDICATORS

The sub-miniature indicators shown here and other sizes and styles shown on the following page are examples of those most frequently used by panel designers. A complete catalog of IPI indicators and switches is available on request.

The QT series below owe their wide popularity to low cost, dependability, and the patented "slide base" lamp that is self-orienting when replaced. Caps are available in a variety of translucent or transparent colors and domed or flat top shapes. The LED and neon models feature a micro-grooved dome cap for optimum visibility.

5.0	.115	.150	40,000	LA870	LA824

Features:

- Easy installation and removal
- Standard size fully interchangeable with conventional bi-pin lamp
- Short version unique for small-space applications
- Available with integral lens for increased light intensity from end of lamp (consult factory)

Tested in an integrating sphere traceable to National Bureau of Standards, after minimum burn-in period of 16 hours at 5V.

– FEATURING –

- Ready to mount into panel cutout
- Servicing from front without tools
- Supplied in attractive assemblies with bezel
- Includes anti-glare "Black-Out" panel & color filter
- Snap-in logic boards available with memory option
- All wear parts (lamps and logic) socket mounted
- Plus minus signs, colons, decimal, message modules optional

SPECIAL SYSTEMS

We have supplied various hardware designed to meet special customer needs, including keyboard entry displays, up/down counters, hi-threshold interfaces, pre-determining counters, display/control systems and special enclosures. Call us to discuss your requirements.

LIGHTED INDICATORS
STATUS DISPLAYS
BACK-LIGHTED/DEAD FRONT PANELS
ANNUNCIATORS

SERIES 68011, 68012, 68013 AND 68014

Any group of messages/symbols can be displayed in any combination of colors • Front panel graphics are back lighted using Std. MFB T 1¾" lamps • Basic message module sizes: 3/8" Sq, 3/8" x 3/4", 3/8" x 1-1/8", 3/8" x 1-1/2" or multiples of these • Units are supplied in an attractive package with bezel and "Black-Out" front panel, ready to snap into rectangular panel cutout • Common ground reduces installation time • Servicing can be done from the front • Lamp drivers and special logic available.

74000 SERIES BACKLIGHTED/DEAD FRONT PANEL ASSEMBLIES are available to meet a wide variety of medium to large size display applications. These are supplied to meet customer specifications.

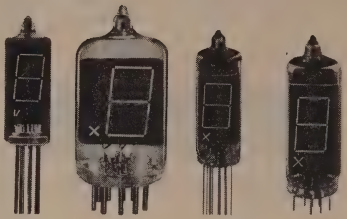
The world's broadest line of

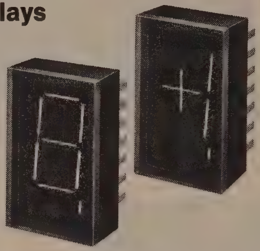
Industrial Electronic Engineers, Inc. • 7740 Lemona Avenue,

IEE - APOLLO — Incandescent Tube Digital Displays

- Choice of .4", .5", or .6" high, 7 segment digital characters (plus selected alphanumerics, ± 1, and decimal point options)
- Adjustable brightness: 1,500 through 85,000 F/L against black ceramic base for sharp contrast in high ambient lighting
- Variable, low power, AC/DC operation: 3.5 to 12.0V; 10 to 30 MA per segment
- Wide, single plane viewing angle (140°); unobstructed display
- Color filter option
- Rugged construction; 100,000 hour life expectancy
- Standard BCD logic, IC Driver/Decoder, commercial socket compatible



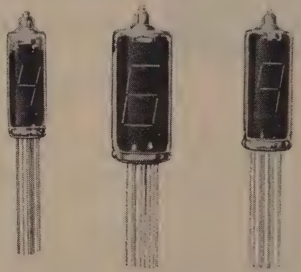
IEE - AURORA — Incandescent Flatpack Digital Displays



- Choice of .472" or .614" high, 7 segment characters
- 4,500 F/L of "morning dawn" brightness
- Low power - 15 MA per segment at 5 VDC
- Sharp contrast and excellent, 120° angular readability in high ambient lighting
- Convenient, slim profile; standard DIP package design
- 100,000 hours average life expectancy

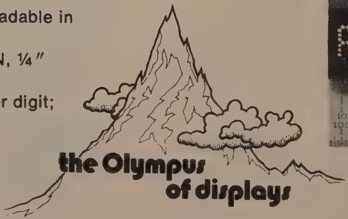
IEE - LUNA — Neon Tube Digital Displays

- Choice of 3/8", 1/2", or 5/8" high, 7 segment characters
- Sharp, high-contrast display with wide angle (120°) viewing
- Low power, cool operation - .5 MA at 190 VDC Max
- Bright, amber, single plane, stable and unobstructed characters
- Rugged, 100,000 hour life construction
- Minimal cost per digit
- Wide temperature range



IEE -HELIOS – High Intensity Fiberoptic Displays

- Specially designed for aircraft use; readable in direct sunlight @ 40,000′ altitude
- 7 segment numeric or 16 segment A/N, ¼" high characters
- Hi-density packaging: .1 in³ & .1 oz per digit; .2 in³ & .15 oz per A/N character
- Variable brightness for night vision
- 20mA per segment @ 5 VDC
- Meets MIL-E-5400, Class 2



displays — digital readouts

Van Nuys, California 91405 • Telephone: (213) 787-0311 • TWX 910-495-1707

IEE - HERCULES — Light Emitting Diode Displays

- Slim profile; single plane; standard 14/16 pin, .3″ C/C DIP-packaged (except Series 1714)
- Character format versatile; choice of red, yellow or green colors
- Self-contained LSI chip, logic options (BCD, hexadecimal, pulse count accumulation)
- Numeric, hexadecimal or alphanumeric formats available; seven segment or 5x7 dot matrix characters
- Bright, transparent-plastic encapsulated characters, easily readable over wide angles
- Durably designed for minimum power & low cost per digit
- Choice of .27″, .3″, .43″ or .6″ high characters
- Install as integral unit with IEE•ATLAS Display Mounting Hardware

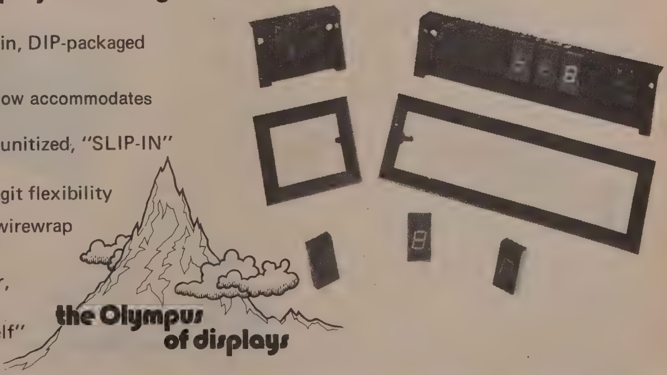
IEE - ATLAS — Universal Display Mounting Hardware

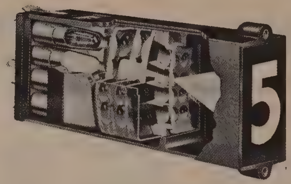
- Accommodates all standard 14/16 pin, DIP-packaged LED and planar displays
- NEW, "WIDE-EYE" bezel with 1″ window accommodates character heights up to .500″
- Provides automatically self-aligning, unitized, "SLIP-IN" installation
- Offers optional two through eight digit flexibility
- Simplifies interconnection through wirewrap termination
- Facilitates wide-angle, optional color, polarized viewing
- Forever puts an end to "do-it-yourself" installation problems



The world's broadest line of

Industrial Electronic Engineers, Inc. • 7740 Lemona Avenue,

IEE - TITAN — Projection Readout Displays



- World's most extensively used message displays
- Completely versatile - displays any image, color, message, type style reproducible on film with variable brilliance
- Bright, easily, legible, single plane, 160° wide angle viewing
- Displays from 12 to 48 messages per module
- Easily combined into multi-module, integral assemblies for added information capacity
- 14 different models: message type font heights from .076" to 1.39"; individual character heights from 3/8" to 3-3/8"; MIL-R-39027 models available
- Ultra-reliable, non-mechanical, passive operation; easy unitized installation; long life, low power, subminiature incandescent lamps
- Integral Driver/Decoders optional

IEE - IRIS — Transilluminated Status Indicators & Annunciators

- BIG, BOLD, BRIGHT display with easy-to-read, single plane viewing
- Choice of 1/2", 3/4", or 2" high, 7-bar digital or 9-bar hexadecimal characters
- Up to twelve discrete messages per module; five optional, standard screen colors
- Unlimited message versatility - any graphics or symbols reproducible on film
- Long life, low power, subminiature incandescent lamps
- Simple, plug-in installation
- Low cost per message with optimum versatility
- Integral Driver/ Decoders optional

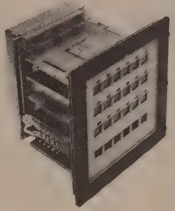
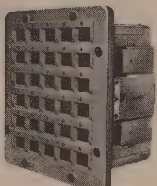
message displays & systems

Van Nuys, California 91405 • Telephone: (213) 787-0311 • TWX 910-495-1707

IEE - SYSTEMS

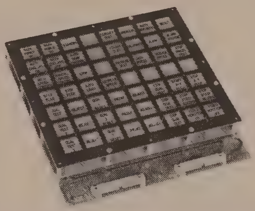
- Adaptable to all applications and environments
- Airborne, space, shipboard, subsurface, field and command center, military applications
- Process control, petrochemical, hydroelectric, paper, textile, aluminum, and manufacturing industrial usages
- Point-of-Sale, communications, telephonic switching accounting, computer, public health, educational, transportation, public services, governmental, medical & hotel facilities, and service industry commercial installations
- Multi-functional capabilities: information display; status indication; switching; automatic control; operator cueing and decision assistance; POS customer data





IEE - MIDAS — Illuminated Transparent Switches & Keyboard Arrays

- Environmentally sealed, transparent mylar membranes
- Extremely lightweight, "wafer-thin", profile - front & rear of panel
- Long life: 1,000,000 cycle life-rated
- No mechanical linkage, springs or buttons
- Quiet, positive, fingertip pressure (4-9 oz.), single pole/single throw, momentary contact switching
- Lowest cost per switch for high density switch requirements
- Optional matrix design (customized or standard), such as 1x8, 3x4, 2x3, 5x6, 7x8, 10x10, etc.
- Displays any graphic data reproducible on film; optional color



IEE - ARGUS — Dot Matrix Message Panel

- Choice of 4-line, 64-character or 8-line, 128 & 256-character soft copy panel displays
- 5x7 dot matrix; .3" character height; .9mm individual dot diameter
- Soft green characters for easy viewing
- USASCII/EBCDIC code compatible; complete repertoire of A/N's and symbols
- Flat plate display panel for overall slim profile
- Low operating voltage
- 100 us clock rate

IEE - HERCULES/ELECTRA — Solid State Indicators

- Ideally suited for visual indicators, large displays, and built-in diagnostics
- Choice of red, yellow, amber, or green, diffused light
- High brightness, with low cost, solid state reliability
- Socket, PC board or ⅛" panel mounting
- TTL/DTL circuit compatible
- Choice of T-1 or T-1¾ sizes

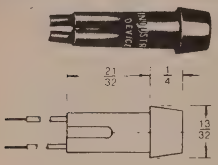
IDI Pilot and Indicator Lights—

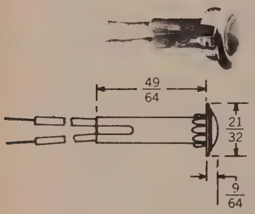
Glo-Dot



SERIES 2990D
One-piece lens-body 6, 12 and 28 volt incandescent pilot lights.

Lens Color	6V	12V	28V
Red	2990D1-6V	2990D1-12V	2990D1-28V
Amber	2990D3-6V	2990D3-12V	2990D3-28V
White	2990D4-6V	2990D4-12V	2990D4-28V
Green	2990D5-6V	2990D5-12V	2990D5-28V
Blue	2990D6-6V	2990D6-12V	2990D6-28V
Yellow	2990D7-6V	2990D7-12V	2990D7-28V

Mounting hole—5/16" diameter.



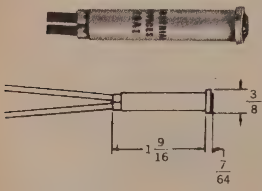
SERIES 2990P
One-piece lens-body 6, 12, and 28 volt incandescent pilot lights with plug bezel and low profile lens.

Lens Color	6V	12V	28V
Red	2990P1-6V	2990P1-12V	2990P1-28V
Amber	2990P3-6V	2990P3-12V	2990P3-28V
White	2990P4-6V	2990P4-12V	2990P4-28V
Green	2990P5-6V	2990P5-12V	2990P5-28V
Blue	2990P6-6V	2990P6-12V	2990P6-28V
Yellow	2990P7-6V	2990P7-12V	2990P7-28V

Mounting hole—½" diameter in 1/32 to 3/32" thick panels.

Current ratings for 2990D and 2990P series: 6V-.200A, 12V-.100A, 28V-.040A.

GLO-DOT MINIATURE NEON PILOT LIGHT WITH WIRE LEADS

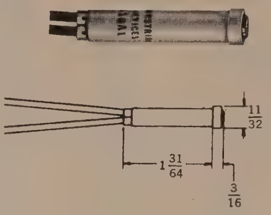


SERIES 2120A

Lens Color	120 VAC
Red	2120A1
Amber	2120A3
White	2120A4

Mounting hole—5/16" diameter

GLO-DOT MINIATURE NEON PILOT LIGHT WITH WIRE LEADS

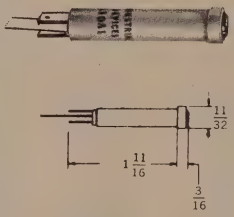


SERIES 2110A 2112A

Lens Color	120 VAC
Red	2110A1
Clear	2110A2
Amber	2110A3
White	2110A4
Green	2112A5

Mounting hole—5/16" diameter

GLO-DOT MINIATURE NEON PILOT LIGHT WITH .187 TERMINALS**

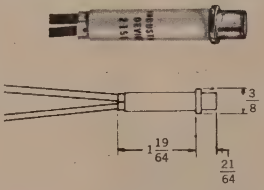


SERIES 2110QA 2112QA

Lens Color	120 VAC
Red	2110QA1
Clear	2110QA2
Amber	2110QA3
White	2110QA4
Green	2112QA5

Mounting hole: 5/16" diameter

GLO-DOT MINIATURE NEON PILOT LIGHT WITH WIRE LEADS

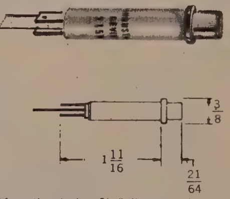


SERIES 2150A 2152A

Lens Color	120 VAC
Red	2150A1
Amber	2150A3
White	2150A4
Green	2152A5

Mounting Hole—5/16" diameter. Voltage—105-125 VAC.

GLO-DOT MINIATURE NEON PILOT LIGHT WITH .187 TERMINALS**



SERIES 2150QA 2152QA

Lens Color	120 VAC
Red	2150QA1
Amber	2150QA3
White	2150QA4
Green	2152QA5

Mounting hole—5/16" diameter. Voltage—105-125 VAC.
**All terminal models tinned for soldering convenience.
Wire lead models have 4½" leads stripped ½"

IDI Pilot and Indicator Lights

Red, Green or Amber Light Emitting Diodes

Light on your budget, heavy on performance

All models incorporate gallium phosphide light-emitting diodes—the brighter, more efficient LED

SOLID STATE GLO-DOT 2190U Series
HEMISPHERICAL LENS—RED, AMBER OR GREEN

Approx. 100,000 hour life. Low voltage, low power drain—ideal for solid state and battery operations. Built-in current-limiting resistor and rectifier diode permit unit use in AC and DC applications, and protect against damage from incorrect polarity connection. Highly reliable, shock and vibration resistant. Requires 5/16" diameter hole for mounting (speednut supplied).

Lens Color	WITH WIRE LEADS 6 Volt	12 Volt	28 Volt
Red	2190U1-6V	2190U1-12V	2190U1-28V

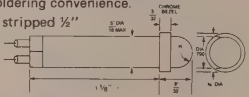
Green	2190QU5-6V	2190QU5-12V	2190QU5-28V

**All terminal models tinned for soldering convenience.

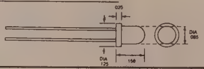
Wire lead models have 4½" leads stripped ½"



SOLID STATE SUBMINIATURE LED
4302 M SERIES—RED, GREEN OR AMBER

For circuit applications where space is limited. Wiring and installation instructions are funished with each unit.

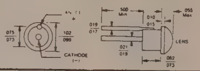
Lens Color	Stock Models Available	
Red	4302M1	**VOLTAGE RATING** From 3V up depending on resistor you use.
Amber	4302M3	
Green	4302M5	



SOLID STATE MICRO-MINIATURE LED
4301T SERIES—RED, GREEN OR AMBER

For circuit applications where space is limited. Wiring and installation instructions are furnished with each unit.

Lens Color	Stock Models Available	
Red	4301T1	**VOLTAGE RATING** From 3V up depending on resistor you use.
Amber	4301T3	
Green	4301T5	



SOLID STATE GLO-DOT 2190L SERIES
FLAT TOP LENS—RED, AMBER OR GREEN

Approx. 100,000 hour life. Low voltage, low power drain—ideal for solid state and battery operations. Built-in current limiting resistor and rectifier diode permit unit use in AC and DC applications, and protect against possible damage from incorrect polarity connection. Highly reliable, shock and vibration resistant. Requires 5/16" diameter hole for mounting (speednut supplied).

Lens Color	With wire leads 6 Volt	12 Volt	28 Volt
Red	2190L1-6V	2190L1-12V	2190L1-28V
Amber	2190L3-6V	2190L3-12V	2190L3-28V

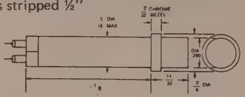
Red	2190QL1-6V	2190QL1-12V	2190QL1-28V
Amber	2190QL3-6V	2190QL3-12V	2190QL3-28V
Green	2190QL5-6V	2190QL5-12V	2190QL5-28V

**All terminal models tinned for soldering convenience.

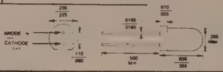
Wire lead models have 4½" leads stripped ½"



SOLID STATE 4300H HIGH DOME
LED SERIES—RED, GREEN OR AMBER

Each unit is packaged with one black panel mounting clip. Wiring and installation instructions are furnished with each unit. Mount in 17/64 diameter hole.

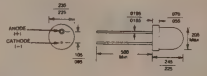
Lens Color	Stock Models Available	
Red	4300H1	**VOLTAGE RATING** From 3V up depending on resistor you use.
Amber	4300H3	
Green	4300H5	



SOLID STATE 4300S STANDARD DOME
LED SERIES—RED, GREEN OR AMBER

Each unit is packaged with one black panel mounting clip. Wiring and installation instructions are furnished with each unit. Mount in 17/64" diameter hole.

Lens Color	Stock Models Available	
Red	4300S1	**VOLTAGE RATING** From 3V up depending on resistor you use.
Amber	4300S3	
Green	4300S5	



Note: Resistance values are reccomended to limit current to approximately .015A for Red LEDs, and approximately .04A for Green and Amber LEDs.

DIMENSION IN INCHES

New! Green Glow Pilot Lights

For the first time a green "neon" is available! The broad-spectrum bright green color gives you greater design flexibility, especially when emphasizing such functions as safe/unsafe and on/off. A special phosphor coating inside the bulb, which converts the emission from the internal ionized gas to green light, makes the green "neon" glow possible.

INDUSTRIAL DEVICES, INC.

The Bright Spot for Your Product

Mini-Slide

• FULL RANGE OF COLORS • EASY TO INSTALL • SECURELY SEATED — WILL NOT VIBRATE LOOSE • ECONOMICAL — LONG-LIVED • EASY RELAMPING FROM FRONT OF PANEL • U.L. RECOGNIZED CSA APPROVED (120V MODELS)

Pilot Light Assemblies

MODEL 2800 SERIES
for use with "Pilot" Lamps

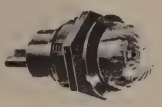
MINI-SLIDE Series 2800 pilot light assemblies are bright, highly visible, beautiful pilot lights styled with either solid black or stainless steel bezels.

The units feature round, light-diffusing, screw-in lenses. They come in a variety of colors and utilize "pilot" lamps in a full range of voltages from 6 to 120 volts. The lenses are molded polycarbonate, and the screw-in design permits easy relamping from the front of the panel. Mini-Slide Series 2800 is UL listed and CSA approved for 120 volt service.

There are 2 sockets. Model 2800 (all plastic-black bezel) and Model 2801 (mirror-finish stainless steel bezel). Leads can be attached by soldering or with quick-connect receptacles for .205 x .020 tab.

MOUNTING

The heat-resistant phenolic socket is held to panel by means of a unique nylon torque-limiting nut (U.S. Patent 3352194). This nut eliminates any possibility of stripping threads or over-tightening, and is self-locking. Series 2800 Pilot Light Assemblies mount in an 11/16" diameter hole.



Socket #	Description

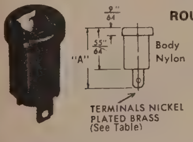
Ordering Information. The complete assembly model consists of the socket number plus lens code and lamp voltage and designation. (See table). For example Model 2801A1-120PSB indicates an assembly consisting of socket with stainless bezel, (2801), red lens (A1) and 120V lamp.

Individual Sockets

Available in round or rectangular styles to suit your design requirements. MINI-SLIDE mounts in ½" diameter holes—which may be punched with flats to prevent rotation. Model 3002 series socket can be turned to establish ½" or ¾" mounting centers.

Models 3001 and 3002 series sockets are molded from black nylon and accept "Indicator" lamps—Model 3061 socket is molded black phenolic and accepts the longer "Pilot" slide base lamps.



ROUND SOCKETS
MODEL 3001
3041 3044

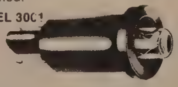
RECTANGULAR SOCKETS
MODEL 3002
3042 3045

Round Sockets Model No.	Rectangular Sockets Model No.	Terminal Size	Dim "A"
3001	3002	.205 x .020	1 9/64"
3041	3042	.187 x .020	1 9/64"
3044	3045	.060 Wide No Hole	63/64"

Mounting

All MINI-SLIDE 3000 Series single sockets (3001, 3002, 3061) mount in either a ½" round hole or a standard "D" shaped hole. Push-on speednuts are automatically supplied with MINI-SLIDE sockets. Normally, #461 will be supplied with single sockets and ¾" center strips—#1264 supplied with ½" center strips. When single sockets are mounted on closer than ¾" centers, the #1264 speednut should be used and will be supplied if specified.

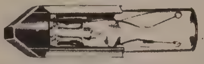
MODEL 3001



SHORT SLIDE BASE LAMPS

A complete line of rugged, long-life miniature incandescent slide base lamps is available, covering a wide range of voltages up to 120 volts and ratings up to three watts. Lamps are available in two lengths, the shorter "Indicator" lamps and the longer "Pilot" lamps.

"INDICATOR" LAMPS



"PILOT" LAMPS

Although relamping can be accomplished readily without special tools, where many lamps must be replaced a lamp-puller is helpful. The most effective such tool is simply a piece of soft vinyl sleeving of appropriate size. Order as stock No. 1937.

"INDICATOR" LAMPS

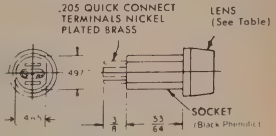
MODEL 3060 SERIES
For use with "Pilot" Lamps

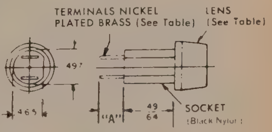
MINI-SLIDE Model 3060 assemblies accept slide base "Pilot" lamps. Socket molded of black phenolic is UL listed and CSA approved for 120 volt service and takes both round and square lenses. Lenses snap on or off for easy frontpanel relamping.



MODEL 3040 SERIES
For use with "Indicator" Lamps

MINI-SLIDE Model 3040 sockets are molded from black nylon. Designed to accept short slide base "Indicator" lamps. Otherwise identical to Model 3060.

Model No.	Terminal Size	Dim "A"
3040	.205 x .020	9/32"
3043	.187 x .020	9/32"
3046	.060 Wide No Hole	1/8"



Pilot Light Lenses

for 3060-3040 Series

MINI-SLIDE individual pilot light lenses are available in 3 shapes—round, square, and angle. Lenses are molded polycarbonate and either round or square lens will fit both 3040 and 3060 sockets. Angle lens will fit model 3060 with "Indicator" lamp only. Each lens is available in 7 bright colors (see table). Round and square lenses may be supplied hot-stamped with legends as desired. All lenses are keyed to socket for correct orientation.

ROUND LENS

	ROUND LENS		SQUARE LENS	
Lens Color	Lens Code	Lens Part No. (if ordered separately)	Lens Code	Lens Part No. (if ordered separately)

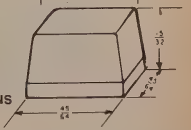
Yellow	C7	3117	D7	3127



SQUARE LENS

Ordering Information The complete assembly model consists of the socket number plus lens code (as derived from the lens table) and lamp voltage designation. For example: Model 3060D1-120PSB indicates an assembly consisting of socket, square red lens and 120v lamp. Model 3040C5-28ESB consists of a socket and a round green lens with 28ESB lamp.

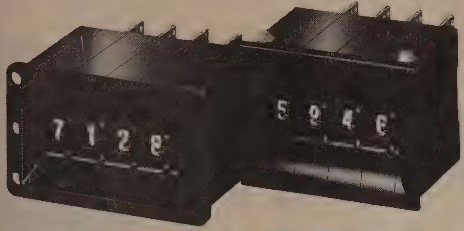
WHEN THE ORDINARY WON'T DO!

Thumbwheel Switches • Miniature Lamps • Glow Lamps • LEDs • Indicator Lights



HARDWARE?

WHO NEEDS IT!

Not with Inter-Market's new "no hardware" Series SM subminiature thumbwheel switches. You put them together with built-in snap studs . . . which eliminates hardware, saves assembly time and simplifies bank changes . . . to reduce costs.

Even their size is frugal . . . a mere 8mm. wide with 5mm. high characters. Front or rear mounting models . . . 10, 11 and 16 position wheels . . . decimal or BCD boards . . . single or double pole.

Fully U.S. made . . . with plus features like removable stop pins, PCB pin terminations and plastic dust windows.

So go ahead . . . cut costs, fight inflation. Be a hero.

MINIATURE LAMPS

OUR HELPING HAND

If the prosaic nature of miniature lamps leaves you a little cold, maybe you'll warm up to our price and delivery.

Not being one of the "big" little lamp people—at least not yet—means Inter-Market has to do some attractive things on pricing and shipping to compete.

We aren't running this ad to ask to be your second source, but we'll accept this for openers. So if you're being kicked around by one of the "bigs," let's talk. You're important to us and we respond accordingly.

Complete lines of ImLec miniature and subminiature filament lamps, neon glow lamps, Green Glow lamps and accessories. Lamps only or packaged assemblies.

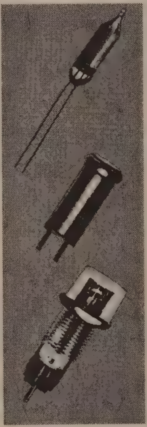
Request Bulletin ML-74

UNIQUE, NEW

green glow

LAMPS & INDICATOR LIGHTS

Give your product *a new look* without expensive retooling or redesign



New high brightness lamps provide a pleasing, "easy on the eye" **green glow** . . . instead of conventional orange-red. Distinctive when used alone, greater contrast when used with ordinary neon glow lamps.

No expensive filtering, retooling or product modification required. Simply substitute for what you are now using. Inter-Market's green glow feature is available in lamps alone or in five models of packaged lamps, including both indicator lights and cartridges.

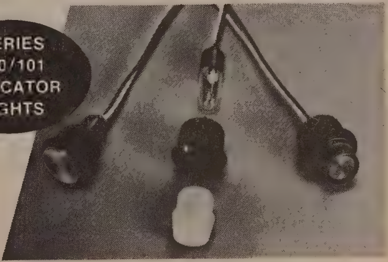
SERIES 100/101 INDICATOR LIGHTS



VERY PURPOSEFUL PARTS FOR MODULAR VERSATILITY

Somebody has finally seen the light on indicator lights. It's Inter-Market with their Series 100/101 comprised of three very purposeful parts.

A rubber bushing snaps into a ⅜" dia. cutout—and stays there without any nut or retainer clip. Then "marry" your light source and lens cap and "divorce" them later, if you change your mind as sometimes happens.

As your light source, choose a 6, 14 or 28 V. filament, neon, Green Glow or LED lamp assembly—now or later. Select blue, red, yellow, green, white or clear lenses in flush or top hat style. In addition to this modular design versatility, your production manager will appreciate the latitude in assembly and your customer the ease of lamp replacement.

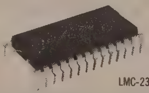
SILICON PRODUCTS

Calculators

LBC-1081



LMC-2302

LMC-2302 MOS/IC 8-digit full accumulating memory, full floating decimal point, automatic constant, percent and square root.

LMC-2304 MOS/IC 8-digit scratch pad memory, full floating decimal point, automatic constant, percent, square, square root and reciprocal.

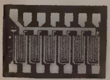
Both calculators have automatic shut-off.

LBC-1081 Bipolar IC including the digit decoder/drivers and necessary circuitry for the automatic shut-off feature of the 2300 series calculator MOS.

A full line of low cost 8 and 9-digit LED calculator displays is available.

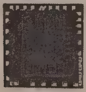
LBC-1050 Bipolar IC is an 8-driver active low open collector array designed for use as the digit driver interface between MOS circuitry and LED displays.

Electronic Digital Watches



LBC-1060

LBC-1070



LMC-6120

LMC-6130

The LMC-6120 is a versatile multiplexed LED watch CMOS integrated circuit chip capable of displaying on demand seconds, minutes and hours.

The LMC-6130 is a versatile multiplexed LED watch CMOS integrated circuit chip capable of displaying on demand seconds, minutes, hours, day and date.

The LBC-1060 is a monolithic NPN transistor array designed for use as an LED/CMOS digit driver interface in electronic watch systems.

The LBC-1070 is a monolithic NPN transistor array designed for use as an LED/CMOS segment driver interface in electronic watch systems.

A full line of 4-digit LED electronic watch displays is available.

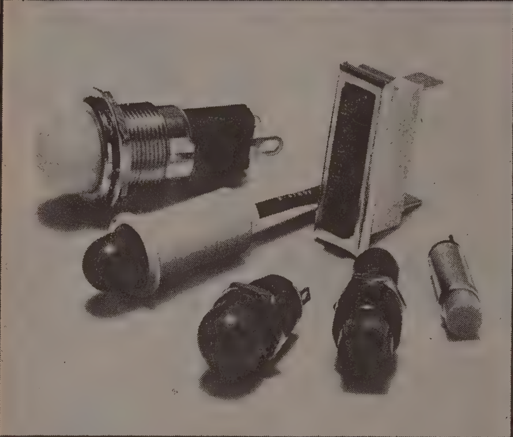
LITTELITES

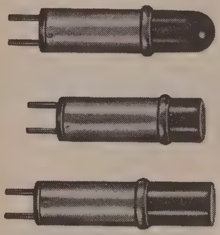
INDICATOR LIGHTS. . .



- **Broad line** . . . Littelites include Cartridge Lamps and Lampholders, Subminiature Lampholders, Miniature Lampholders, and Snap-Mount Plastic Lites . . . we offer a wider selection among these four product groups than any other single manufacturer.
- **UL/CSA** . . . All Littelites are UL Recognized or Listed and CSA Certified. New tools and molds assure you of the finest quality lights on the market today.
- **Fast** turn-around on large volume orders.
- **Off-the-shelf** availability from a nationwide network of Littelites distributors.
- **Special** requirements? Just give us a call (312) 824-1188.

CARTRIDGE LAMPS/LAMPHOLDERS

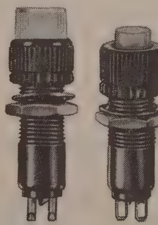
SEND FOR CATALOG LL-C574



UL RECOGNIZED
CSA CERTIFIED
MEET MIL-L-3661 REQUIREMENTS

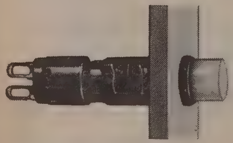
Cartridge Lamps

Incandescent, neon, or solid state. Solid state units supplied with green, red, yellow, or amber LEDs. All cartridge lamps offer a wide choice of lens styles and colors. Mate with cartridge lampholders shown below.



Cartridge Lampholders

Designed for rear mounting into 3/8" clearance hole. Turret pin, solder lug, or solder cup terminals. Available with flat for "D" hole mounting. Supplied separately or as complete assembly, which includes lens cap (smooth or fluted) or lens collar (.284" or .230" wide).

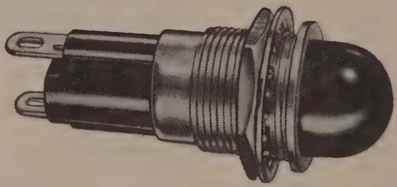


Clips and Sockets

Provides inexpensive means of mounting cartridge lamps directly to the panel. Solder lug or solder cup terminals. Clip secures cartridge lamp in 9/32" mounting hole.

MINIATURE LAMPHOLDERS

SEND FOR CATALOG LL-M574



- For front mounting into 11/16" clearance hole.
- Accommodate T3-1/4 or T2 bayonet based incandescent lamps and T3-1/4 bayonet based neon lamps.
- Screw or solder lug terminals
- Drip proof and "D" hole mounting available.
- Neon lampholders feature built-in resistor.
- Six basic lens styles available in wide choice of colors.
- **UL Listed, CSA Certified** (Solder Lug Terminals)
  UL Recognized, CSA Certified (Screw Type Terminals)

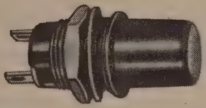
. . . FROM LITTELFUSE

LITTELFUSE

SUBMINIATURE LAMPHOLDERS

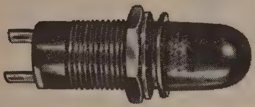
SEND FOR CATALOG LL-S574

Subminiature lampholders accommodate T1-3/4 incandescent or T2 neon midget flanged base lamps. All lampholders allow easy installation and replacement of the lamp and lens from the panel front. **UL Recognized. CSA Certified.**



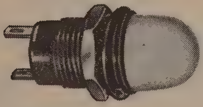
920 Series

For front mounting into 15/32" clearance hole. Accept a T1-3/4 incandescent midget flanged base lamp (1.35-28V). Choice of four different lens styles. Meet requirements of MIL-L-3661.



921 Series

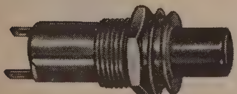
Front mounting into 15/32" clearance hole. Accommodate replaceable T2 neon midget flanged base lamps (C7A—105-125V AC-DC or C9A—110-125VAC). Built-in resistor limits lamp current. Meet requirements of MIL-L-3661.



922 Series

Three different mounting configurations: **922 Series**—front mount—15/32" clearance hole; **923 Series**—front mount—17/32" clearance hole; **924 Series**—front or rear mount—15/32" clearance hole.

Accept a T1-3/4 incandescent midget flanged base lamp (1.35-28V). Choice of four lens styles.



925, 926, 927 Series

Three different mounting configurations: **925 & 926 Series**—rear mount—3/8" hole; **927 Series**—front mount—15/32" hole.

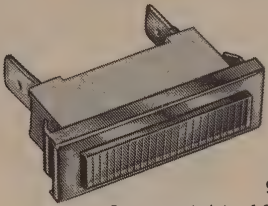
Accommodate either T1-3/4 incandescent or T2 neon midget flanged base lamps. Three different lens styles in smooth face or fresnel. Lampholders and lenses can be furnished with gaskets for drip proof applications.

SNAP-MOUNT PLASTIC LITES

SEND FOR CATALOG LL-P574

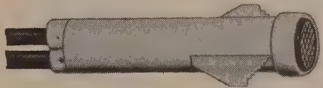
Designed to snap into mounting hole without the use of auxiliary hardware. The 970 and 980 Series feature a pair of flex arms which ensure positive retention and protection against shock and vibration. **UL Listed. CSA Certified:** All units with wire leads.

UL Recognized. CSA Certified: Units with Q.C. Terminals.



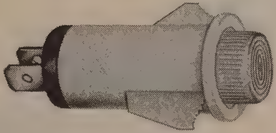
960 Series

Snap-mount into 1.281" x .395" mounting hole. Available with neon (125-250V) or incandescent (6-28V) lamps. Can be supplied with 6" wire leads, 1/4" or 3/16" Q.C. terminals. Choice of fluted or smooth face lens.



970 Series

Snap-mount into .312/.318" diameter hole. Available with neon (125-250V), incandescent (6-28V) or solid state (1.8-28V) lamps. Solid state units supplied with red, yellow, amber, or green LEDs. Terminations include 6" wire leads or .125" Q.C. terminals. Choice of eight lens styles.



980 Series

Snap-mount into .500/.510" diameter hole. Available with neon (125-250V) or incandescent (6-28V) lamps. 6" wire leads or .187" Q.C. terminals. Fresnel lenses in six different styles.

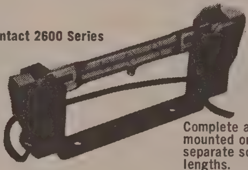
Recessed
Single Contact 2600 Series



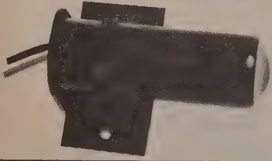
Complete assembly. Two holders mounted on common bracket, or separate sockets. Brackets in all lengths.

Double Contact 2200 Series

No. 22-225

Positions lamp more securely. Prevents shaking loose from vibration.

PHOTOELECTRIC CONTROLS



Full range of sizes for all applications including Counting, Conveyor Control, Inspection and Skew.

Series LRT and LRR

Responds to presence or absence of opaque or translucent materials from a fraction of an inch up to 25 feet. Special designs are available for specific requirements. Contact our applications engineers for details. Light sources may be incandescent or long life, narrow beam L-E-D's.

Series PT41 and PR 41

SSF FLASHER UNIT

SOLID STATE FLASHER PAK

Warning Lights, control for EXIT signs.

Series SSF

Flashing rate as specified Standard 6V-12V-24V, D.C. Standard wire termination. May be modified for specific applications.

X-Y PLASMA DISPLAY UNITS

Clear, stable, accurate and compact alphanumeric displays.
The units are consisted of dot matrix panels with drivers and some logic circuits.

●PXU0601

The unit provides a single row of 32 character positions. Each character is displayed on an NEC PX0606A-32, a 5 x 7 dot matrix plasma display panel. Positive logic 6-bit code employed for modified ASCII display.

PXU0601

Specifications

Character					Dot	
Dot Matrix	Digits	Height	Width	Separation	Size	Pitch
5 x 7	32 x 1-line	5.5mm	3.7mm	2 columns	0.5mm□	0.8mm

General Characteristics

Brightness	Viewing angle	Contrast ratio	Color	Scan rate	Operating temperature	Storage temperature
12fL	≧120°	≧30/1	Neon orange	≧60Hz	−10° ~ 50°C	−20° ~ 70°C

PXU0502A

●PXU0502A

The unit provides 256-character capability (32 digits x 8 lines). Each character is displayed on an NEC PX0705-32, a 5 x 7 dot matrix plasma display panel. Positive logic 6-bit code employed for modified ASCII display.

Specifications

Character					Dot

PRESENTING...
Industry's most complete line of T1 indicator lamps and LED's

Shelly sells more T1 indicators than anyone — Brite-Eye incandescents, Trans-Eyes with built in amplifier, LED's plus low cost, completely assembled indicators. For good reasons. Shelly offers more cap styles, more colors and more time saving features.

Just Snap Them Into Panel

Shelly indicators are the easiest to use, requiring no added hardware. Just insert the indicator into a 0.191″ (#11) hole and press into position. What a snap! Shelly Brite-Eye and Trans-Eye incandescents are also relampable from the front. Just remove the snap-on cap, remove the lamp, insert a new one and replace the cap. It takes just seconds.

Ideal for confined applications

Shelly's unique microminiature "Easy Lamp" housings are ideal for high density packaging applications. Incandescents and LED's mount on 0.225″ centers and weigh in at less than ½ gram. They combine high illumination with clean design. Just right for contemporary panel styling. Indicators have the same physical dimensions, which simplifies mixing or matching.

Wide Variety Of Colors, Cap Styles and Features

Brite-Eyes & Trans-Eyes come in 7 cap styles and colors. LED-Eyes are available with Ball End or Digi-Cap in red, green, yellow and orange. LED-EYE configurations include a current regulated LED for constant light intensity from 4.5V to 11V and a voltage sensing LED.

BRITE-EYES can be easily ordered using this chart

LAMP

Voltage	Amps	MSCP	Life	P/N
5	.020	.03	10,000	A03
5	.060	.05	100,000	A05
5	.060	.15	6,500	A02
5	.115	.15	40,000	A04
12	.030	.10	25,000	A06
18	.026	.15	10,000	A01
28	.024	.15	16,000	A07

Other lamp voltages available on special order.

Completely Assembled Low Cost Indicators

Shelly Associates offers completely assembled, low cost indicator lamps in both Brite-Eye (LCI) and Trans-Eye (LCT) configurations. The indicators are available in 4 colors - red (R), green (G), yellow (Y) and white (W) - with a ball cap, a black base and a 5 volt, 60ma lamp. The LCT uses an NPN transistor. Three current limiting resistors - 1.7K, 2.2K and 3.9K are available.

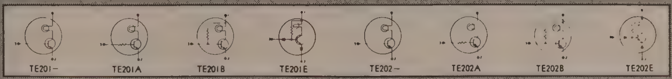
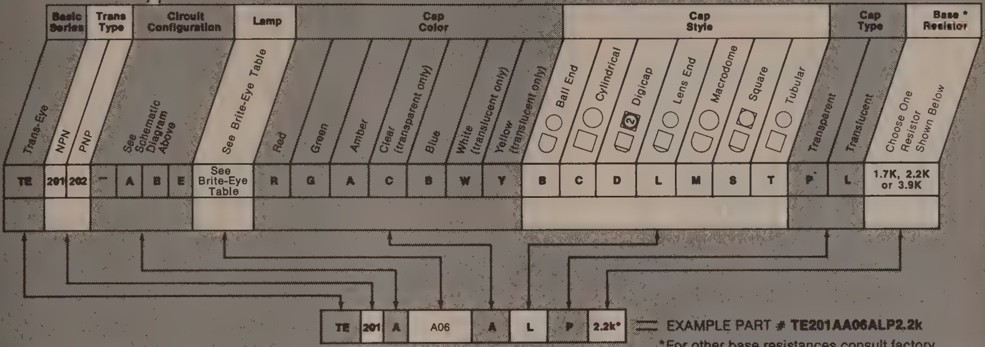
This chart's for ordering TRANS-EYES

TRANS-EYE — Base type/circuit configuration



TE201 & TE202 — Transistor driven lamp — requires ex. base limiting resistor.
TE201A & TE202A — Internal base current limiting resistor. Requires 1.6mA max. base drive. Any value resistor can be specified.
TE201B & TE202B — Internal pull-up resistor. Requires a −1.6mA sink. Use with open collector transistor.
TE201E — Compatible with most TTL, DTL and current sinking logic families.
TE202E — Compatible with positive inverted logic.



Basic Series	Trans Type		Circuit Configuration				Lamp	Cap Color							Cap Style							Cap Type		Base * Resistor

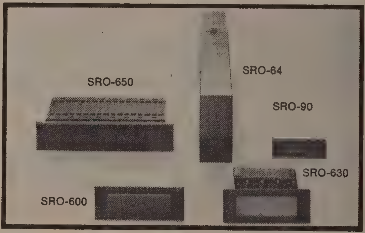
Shelly Multi-Message Modules and Displays

Some Important Advantages

- Industry's largest high-contrast image with single plane 160° viewing insures easy readability and increases operator efficiency.
- True random access provides fast selection of desired message.
- Complete messages are projected eliminating the possibility of erroneous readings.
- Rugged multi-module assemblies last longer and require less maintenance.
- Optional integral driver/decoder saves interface design time at customer level.
- Multi-message modules cost far less than other types of information displays.
- Commercial, industrial and military packaging. Choose the type that best fits your particular requirement.
- Small size minimizes panel space requirements.
- Wide selection of voltage and current combinations for the ultimate in flexibility.

The SRO-90 and 600 series of 12 message displays



SRO-90 Series — Industry's Smallest Multi-Message Module

The SRO-90 is industry's smallest multi-message display, providing a viewing area of 0.435″ by 0.34″. Up to 12 messages can be projected on the single plane screen. Lamp voltages are 5v and 28v and housing is modular. Either snap-on or screw-on bezels are available. A plug-in drive module with TTL logic, with or without memory, can convert an 8-4-2-1 binary input code into the visual decimal display.

SRO-92 is a dual unit which can display two messages simultaneously on a viewing screen that can be split either vertically or horizontally, offering a total of 24 different messages.

2
STUCK
VALVE
3
OPEN

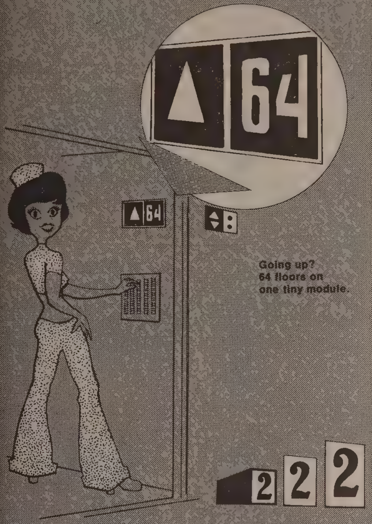
SRO-600 — For Commercial, Industrial & Military Applications

The SRO-600 is a 12 message module with a 0.7″ by 0.59″ display. The unit is modular with a screw-on bezel and offers switching capability. Lamp voltages are 5v to 28v. A plug-in drive module (TTL logic) with or without memory is available to convert an 8-4-2-1 binary input code into the visual decimal display.

SRO-630 is an economical, self-contained module. Display is 0.7″ by 0.59″ with a 12 message capacity. The unit can be provided with mounting brackets for panel mounting or can be provided in a projector component configuration for mounting directly to a PC board or to meet your own design requirement.

SRO 650 is a low cost commercial version of the SRO-600. Maximum viewing area is 0.62″ by 0.59″. Lightweight, with one piece construction, the SRO-650 is similar in performance to the SRO-600.

The SRO-64: up to 64 messages on a tiny, snap-in, snap-out "Slip-Chip"



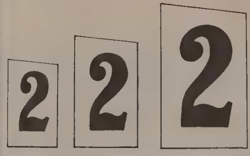
Going up?
64 floors on
one tiny module.

SRO-64

The Shelly SRO-64 is the first Multi-Message Display offering "Slip-Chip" readouts — 64 message "slip-chips" that snap in and out for easy field replacement.

The SRO-64 operates like a miniature slide projector, but uses only one multi-message slide and one projector lamp. Individual images can be created from anything photographable — black & white or in color. Random selection in response to a 6 bit* input code positions the desired image which is projected onto a high contrast screen. The image is retained without signal power and can be changed in only 70 milliseconds. Placement of the screen with relation to distance from the projector allows for image size areas from 0.7″ to 2″ high. Drivers and driver timers for low level and IC inputs are available.

*A subset of ASCII is standard. EBCDIC or virtually any 6-bit code optional.



A Quick-Look at Shelly's Line of Multi-Message Displays

Model Number	Number of Messages	Size of Display	Lamp Voltage	Housing	Driver Modules	Bezels	Switching Capability
SRO-64	up to 64	up to 2″	3.5V to 24V	Self-contained. Mounting cases for 2 to 20 readouts available.	Drivers & driver-timers for low level & IC inputs	Snap-on or screw-on types. RFI and drip-proof	No
SRO-90	12	0.435″ high 0.340″ high	5V-28V	Modular	Decode 8-4-2-1 BCD to visual decimal display	Snap-on or screw-on types. RFI and drip-proof	Yes
SRO-92	2 x 12 (dual unit)	0.435″ high 0.340″ high	5V-28V	Modular	Decode 8-4-2-1 BCD to visual decimal display	Snap-on or screw-on types. RFI and drip-proof	Yes
SRO-600	12	0.7″ high 0.59″ wide	5V-28V	Modular	Decode 8-4-2-1 BCD to visual decimal display	Screw-on type	Yes
SRO-630	12	0.7″ high 0.59″ wide	5V-28V	Self-contained	12 line input only	Screw-on type	No
SRO-650	12	0.62″ high 0.59″ wide	5V-28V	Modular	Decode 8-4-2-1 BCD to visual decimal display	Snap-on type	No

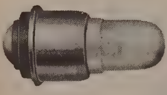
T-1 BASED LED

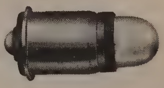


The versatile T-1 Based LED is available in Red diffused, Green diffused and Amber diffused.

It features: **For Red ONLY:**
(operating current of 12mA)
(absolute max. current 40mA)
(2.1V Typical to 3.0V max.)
For Green & Amber ONLY:
(operating current of 25mA)
(absolute max. current 40mA)
(2.4V Typical to 3.6V max.)

Light output is 2.0 millicandelas Typical for all colors at operating current.

T-1-3/4 BASED LED



The versatile T-1-3/4 Based LED is available in Red diffused, Green diffused and Amber diffused.

It features: **For Red ONLY**
(operating current of 10mA)
(absolute max. current 30mA)
(1.9V Typical to 2.4V max.)
For Green and Amber ONLY
(operating current of 10mA)
(absolute max. current 40mA)
(1.9V Typical to 2.4V max.)

Light output is 1.5 millicandelas Typical for all colors at operating current.

Higher voltages are available with built-in resistor within the maximum current limit.

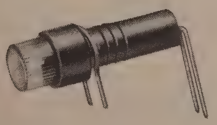
LED RELAMPABLE INDICATOR LIGHTS



The P175 relampable LED indicator is virtually a modular lamp system for designers. The economical nylon-bodied unit features snap-in mounting in a quarter-inch hole on ⅜-inch centers, or PC board mounting—vertical or horizontal. Snap-on domed or flat lenses allow quick replacement of bright, Sloan furnished LED's, or those of any other manufacturer. The P175 is available in 2 to 28 volt units, and can be ordered with pull down resistor if needed.

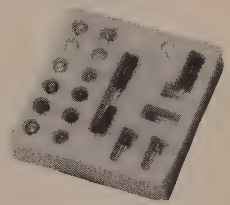
**Printed circuit version available with D configuration body style only.

LED INDICATOR DESIGN KIT 175



The Sloan LED Indicator Design Kit 175 provides all of the component parts necessary to build an LED Indicator for either panel or printed circuit mounting. Varied snap-on lens styles and colors make this concept even more versatile.

KIT CONTENTS

- 12 — Lenses
- 2 — Bodies for Panel Mount
- 1 — Body for PC Mount
- 3 — LED's; Rer, Green & Amber
- 1 — Mounting Clip
- 1 — Instruction Sheet

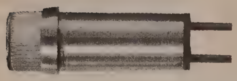
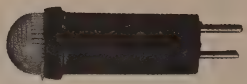
THE SLOAN CO.

Sloan Cartridge Indicators



SOLID STATE
CL SERIES

INCANDESCENT
CI SERIES



NEON
CN SERIES

Sloan Cartridge units are designed to provide low cost, front panel light indication with a variety of light sources and multi-optional mounting features.

Extremely rugged in construction, Sloan Cartridge units consist of an aluminum body incorporating Solid State, Incandescent or Neon light sources. Termination is by .040 diam. stainless steel pins.

Lens styles are flat or domed in transparent or transluscent material. All lenses incorporate Fresnal rings for maximum distribution of light output. A wide variety of lens colors make the Sloan Cartridge line even more versatile.

Series CL is designated for the Solid State version, Series CI for Incandescent and Series CN for Neon. All panel mount through .290 diameter holes and are non-relampable. Solid State and Neon versions can be supplied with or without built-in resistors.

BENEFITS:
- Easy replacement in the field without soldering.
- Interchangeability of light sources after installation with no effect on appearance.
- Interchangeable with most cartridge units on the market.
- Fast delivery from distributor or factory stock.

MATERIAL:

CASE — Aluminum clear anodized — Aluminum black anodized — HiDielectric internal insulation	LENS — Butyrate for Neon and LED — Lexan for Incandescent — All with Fresnal Rings	PINS — Stainless Steel .040 ±.002 Diam.

Electrical Specifications

LED

The following specifications pertain to Red, Green and Amber LED's.

W/RESISTOR: (Standard Values)

5 volt — 40mA Max.
6 volt — 35mA Max.
10 volt — 25mA Max.
14 volt — 20mA Max.
28 volt — 9mA Max.

Other voltage/current combinations available upon request.

W/O RESISTOR:

2.4 volt — 50 mA Max.
1.9 volt @ 10 mA (typical)

INCANDESCENT

	Voltage	Amps	MSCP	Life
1762/ 1764	28	.04	.34	1000 hrs.

BODY-LED-LENS-RESISTOR ASSEMBLY

P175D-R-RTPD-5/15

The P175 relampable LED indicator is virtually a modular lamp system for designers. The economical nylon-bodied unit features snap-in mounting in a quarter-inch hole on ⅜ inch centers, or PC board mounting — vertical or horizontal. Snap-on domed or flat lenses allow quick replacement of bright, Sloan furnished LED's, or those of **any other manufacturer**. The P175 is available in 2 to 28 volt units, and can be ordered with pull down resistor if needed.

At last . . . you can specify exactly and **only** what you need for an LED indicator.

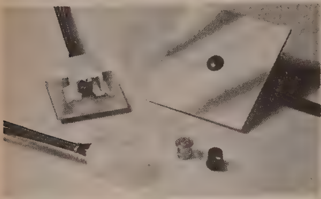
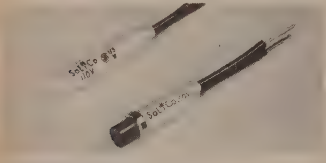
SoLiCo PILOT AND INDICATOR LIGHTS

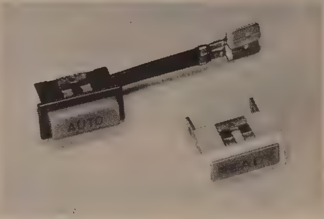


1K14 SERIES
Rear mounts in panel not more than .085" thick. Mounting hole .310" — .320"
LAMP: High brightness neon is standard with complete range of attached resistors available. Miniature incandescent in T-1¾ size available in range of 1.3 volt thru 28 volt.
COLORS: Lens colors are available in complete spectrum both in transparent and translucent material.
Recognized under the component program of U/L and CSA approved.

"L" SERIES
Molded from DuPont Zytel 101. Standard colors are black or white, custom colors available upon request.
Optional: When ordering metal bezel, stainless steel is standard. Consult factory for other finishes.
Recognized under the component program of U/L and CSA approved.



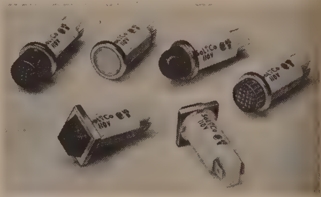
3L SERIES (with built-in resistor)
3S SERIES (resistor in lead)
These compact lights snapfit in a 5/16" hole. No additional hardware is necessary. Extended portion is .350 diameter by .110 inch high, while body length below shoulder is 1.420" long on 3L and .940" long on 3S.
Recognized under the component program of U/L and CSA approved. High brightness neon lamps with appropriate resistors to assure long life while achieving desired brightness. Complete range of incandescent lamps also available.
LENS: F4 and F5* lens is offered in a variety of colors and available in nylon or lexan. Decorative bezel with various finishes upon request. Chrome is standard.
BODY COLORS: White is standard although body can be molded in any color.
LEADS: Same as 5S.



"M" SERIES
These compact units snap securely without additional hardware into .940 by .440 inch opening. Material thickness .031" — .093".
LENS: M Series with "H" lens features a .855 by .315 inch lens face — .170" high offering excellent raised lighting characteristics with a choice of colors. (Imprinting available).
M Series with "F" lens affords a full .860 by .315 inch lighting face ideal for hot stamping legends, even two lines if desired.
BODY COLORS: white or black available.
LEADS: Black plastic 105°C leads 6" long ends stripped ½" and tinned are standard. Any desired length and colored leads can be readily supplied. In addition, these leads can be provided with a variety of terminations — ring, female flag, etc. M series can be supplied with .250" or .187" male spades.

"R" SERIES
These rectangular lights snap in securely (without additional hardware) into 1.312 or 1.280 by .375 inch opening. Material thickness range .030/.080 inch. 2R requires 1.280" by .812 inch mounting hole.
Recognized under the component program of U/L and CSA approved. High brightness neon lamps with appropriate built-in resistors to assure long life while achieving desired brightness. Complete range of incandescent lamps also available.
LENS: Ideal for vertical or horizontal hot stamp legends. These 1.150 by .250 inch lenses are offered in a variety of colors (nylon or lexan). Split lens variations also available (2R and 4R Series).
BEZEL: Decorative bezel in various finishes available (black, bright brass, etc.) Chrome plate is standard.
LEADS: Same as M SERIES.

5S AND 5L SERIES
These stylish round body lights with chrome plated bezel mount into ½" hole and are secured by snapfit feature. The overall body length below the bezel is .900" on the 5S and 1.120" on the 5L.
Recognized under the component program of U/L and CSA approved. High brightness neon lamps with appropriate resistors to assure long life while achieving desired brightness. Complete range of incandescent lamps also available.
LENS: A choice of lens styles and colors available. Nylon or Lexan material.
BEZEL: Decorative bezels in various finishes available (chrome plated is standard).
LEADS: Black plastic 105°C leads 6" long, ends stripped ½" and tinned are standard. Any desired length and color leads can readily be supplied. In addition, these leads can be provided with a variety of terminals, ring, female quick connect, male spade, etc.

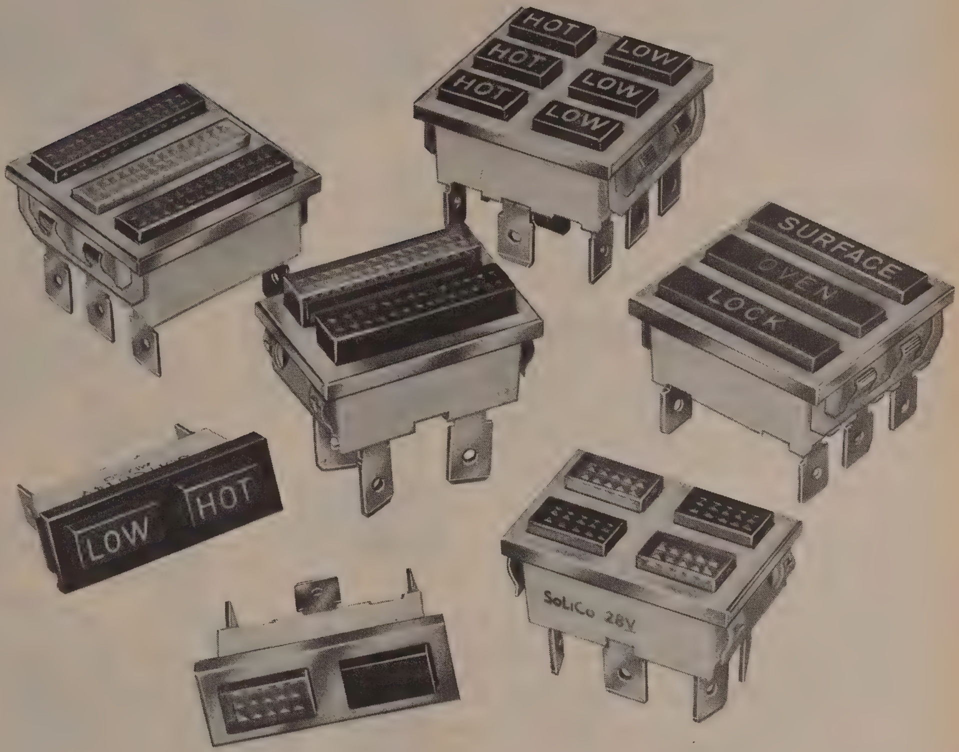


5T SERIES
HOUSING: Zytel 101, White is standard. However, Black, Red and other colors are available. Fits in ½" mounting hole (snap fit).
RATING: Same as 5S — 5L SERIES
LAMP: High brightness neon is standard with complete range of attached resistors available. Miniature incandescent in T-1¾ size available in range of 1.3 volt thru 28 volt.
LENS: Various styles with internal facets for maximum light refraction. Available in Lexan and Nylon.
COLORS: Lens colors are available in complete spectrum both in transparent and translucent material.
BEZEL: Optional, available in chrome or other finishes. Square or round depending on lens style.

S222 SERIES
These lights snap securely without additional hardware into a rectangular opening 1.200 by .640 inch. Material thickness .045 to .065 inch.
LENS: Choice of colors available (nylon and acrylic). Red, white, amber, clear.
LEADS: S222 Series provided with screw terminals, S222-A with wire leads. S222-B provided with .250 male spade terminals.

SORENSON LIGHTED CONTROLS, INC. 530 Oakwood Avenue, West Hartford, Ct. 06110

SoLiCo PILOT AND INDICATOR LIGHTS



multiple indication

SoLiCo now offers a complete range of multiple-function indicator lights. All models snap-mount securely without additional hardware into standard panel openings. Up to six separate lenses may be ordered in any combination of available lens colors; clear, red, amber, white, blue and green. Legend imprinting is available. Chrome plated bezels are standard with decorative black or brass bezels optional. 6″ black plastic leads are supplied. Solder lugs and male spades quick connect or female flag terminations may be specified.

Signalex electromagnetic displays

Inherent memory.
Large size.
Long lasting.
Legible in bright light.

Signalex signalling devices are the simple solutions to problem display requirements. Driven electromagnetically, they are virtually maintenance-free, last almost indefinitely. And the big, bold, light-reflecting characters (up to 6" high and larger) can be seen under most environmental conditions . . . even bright sunlight, or in the dark, when illuminated.

SIGNALEX READOUTS.

Type 400L, shown, is 5" x 3-1/4" x 1-13/16" with a character size of 4" H x 2-1/4" W. It can operate at up to 8 display cycles per second. Type 150L has a character size of 1-1/2" H x 9/10" W. Maximum operating speed is 15 cycles/second.

Specifications

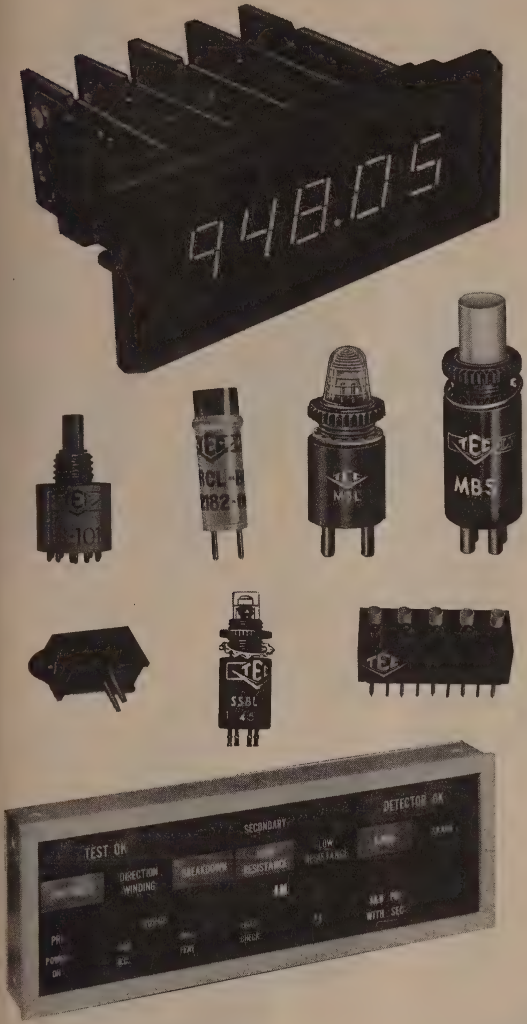
SIGNALEX

TEC-LITE™ YOUR SYMBOL FOR THE HIGHEST QUALITY INFORMATION DISPLAY/CONTROL DEVICES



READOUTS:

Full alphanumeric, low-cost hexadecimals, incandescents, and LED's in red, orange, yellow and green. Sizes from 0.27" to 1 foot. Solid state modules come ready to install and operate. Include decoder/driver and all circuitry needed to hook up to your system.

SWITCHES:

Rotary, PCB-mounted, bounce free, DIP models. Miniature and subminiature versions. Choose from a variety of switch options, lens colors and terminal types.

SWITCH/INDICATORS:

Conventional, subminiature, miniature, DIP and transistorized models. Available with various switch options, lens colors, and LED, incandescent or neon lamps.

INDICATORS:

LED, incandescent and neon. Miniature, subminiature, DIP, PCB-mounted and transistorized models. A size and style to meet most any requirement, with numerous lens colors, terminal types and mounting options.

DISPLAY SYSTEMS:

TEC's line of display systems, display modules, and annunciator systems, provide a low-cost approach to information display and control. TEC also manufactures a complete line of low-cost CRT terminals called DATA-SCREEN® terminals. See last page of TEC section for more details.

OVER 200 STANDARD INDICATING DEVICES! Add a wide variety of options—such as RFI/EMI shielding, numerous lens styles and voltage levels—and the number of catalogued items runs over 1,000,000! Also, over 50% of the products we sell are specials—devices made to our customers' specific designs. TEC has over 8,000 electrical and mechanical designs on file, so let us help you with your special requirements. And for a demonstration of TEC-LITE Indicating Devices in your own plant, just contact your nearest TEC-REP.

TEC offers you a complete man-machine interface line of highly reliable, economically priced devices for every information display and control need: computers and peripherals, industrial controls, communications, test equipment, aircraft and missiles, navigation, guidance/control systems and consumer products—TEC serves all, with over 17 years of proven performance. The following pages contain a sampling of TEC-LITE Indicating Devices. For detailed information on our complete product line, ask for 96-page catalog No. 2027.

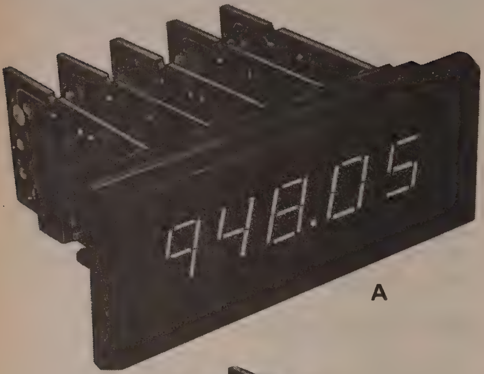
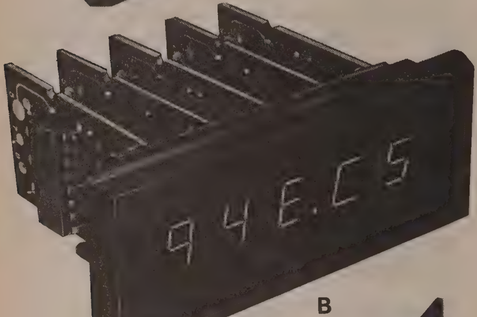
TEC-LITE™

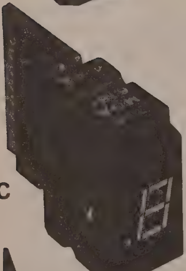
DIGITAL READOUTS



A



B



C

D

- **Bright, sharply defined characters are easily read over wide viewing angle from 10 feet to over 60 feet**
- **IC-compatible devices are controlled by DTL or TTL signal levels for high brightness with low power and current requirements**
- **All units have solid state circuitry for long life and dependability and accept BCD inputs**
- **Optional bezels provide handsome panel appearance, mount quickly and easily, and include red, neutral or amber polarizing filters**

Choose from a wide variety of standard configurations and display types, as well as custom-designed modules. All have supply voltage of 5 VDC ±5%. Some typical applications are calculators, digital clocks, counters, time/event indicators, test instrumentation, digital voltmeters and display terminals.

The SSR Series (A) is available with LED's (green, red and yellow in two models) in heights from 0.27" to 0.60" and incandescent displays in heights of 0.30" and 0.625". All models in this series have 7-segment decoder/driver and include nondriven decimal point, overflow module, memory option, lamp-test feature and provision for automatic blanking of leading and/or trailing edge zeros in a multidigit assembly.

Hexadecimal readout (B) has the same features as above, but with 0-9 and A-F character sequence, built-in memory, 0.27" or 0.30" high red LED display, and no lamp-test feature.

The MDA Series (C) consists of single-digit and hexadecimal LED displays in heights from 0.27" to 0.60". This series is available with decoder/driver, latch and counter, overflow module (D), and red, orange, green and yellow LED's in two models.

The R-100X Series (E) has the same features as the SSR Series above, but uses discrete LED's instead of a 7-segment display. Standard character heights are 1", 2" and 3", and we can build these modules up to 1 foot high.

Full alphanumeric readouts (F and G) are equipped with ROM, drivers and clock and display 64 ASCII characters. Available in two models: 35-diode, single-plane red LED array 0.35" high (F) and 35-diode, discrete red, green or yellow LED array 1" high (G).

TEC also manufactures transistorized neon digital readouts and other incandescents; see catalog No. 2027 for details.

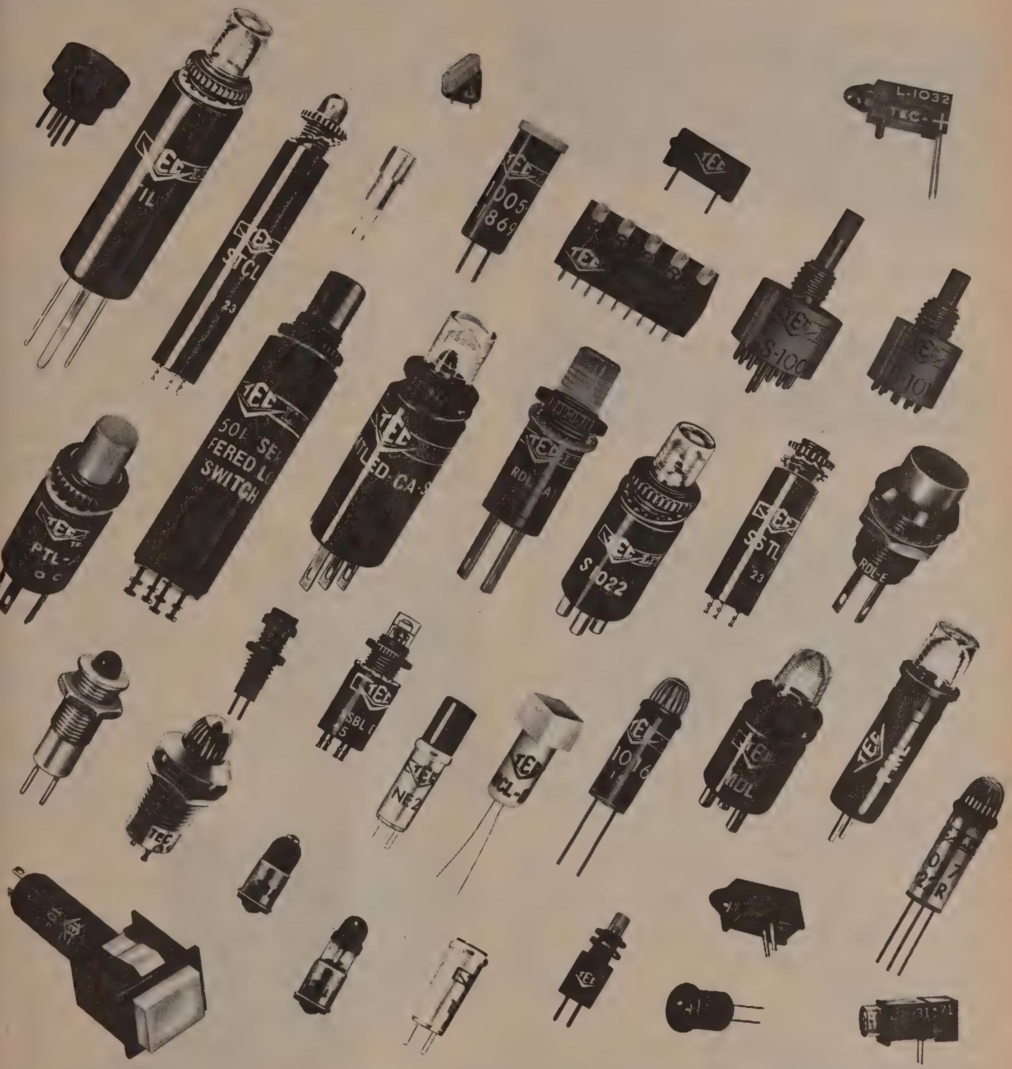
TEC-LITE™ SWITCHES AND INDICATORS



TEC–LITE switches and switch/indicators are available in a variety of switch options: momentary, alternate or snap-action SPST-NO-DB, SPST-NC-DB, SPDT-DB (NO & NC) and NO-DPST. Rotary switches can be factory set from 2 through 16 positions, depending on model. Terminal types available include turret lug, solder lug/taper tab, taper pin receptacle, wire-wrap and wire leads. Supply voltages range from 2 to 100 VDC, and many devices are available with replaceable lamps.

TEC–LITE indicators are available with the same terminal options and voltage ranges as shown at left, and many have replaceable lamps. All devices have either an anodized aluminum or rugged plastic body; irridite finish is available with many models for RFI/EMI shielding. Engraved legends and waterproof models are also available at slight extra cost. Units on this page are shown approximately actual size (except for rectangular switch/indicator, shown 50% actual size).

See the complete line of TEC–LITE switches and indicators in catalog No. 2027.

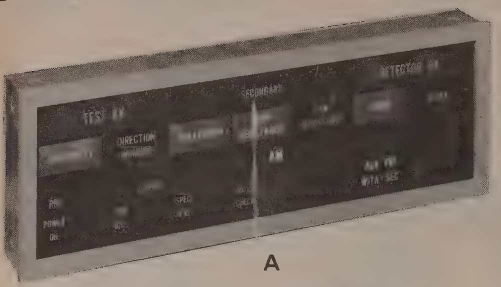
TEC-LITE™ DISPLAY SYSTEMS



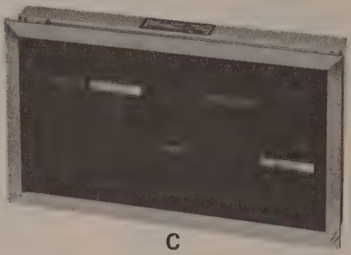
A

A. DATA·PANEL® DISPLAY SYSTEMS. These integrated display cost less per point than individual indicators and cut installation by 50% or more. Messages displayed in single viewing plane, and optimum use of IC's lowers cost and increases reliability. Permanently visible legends, symbols and grid lines can be provided. Unit functions as a total input/output system and is modular designed to grow with your needs. . .may be installed in consoles, racks or walls. Just a few applications are: data processing, communications, materials handling and dispatch. For complete information, ask for brochure No. 1024.

MEM 0
FAULT
NON PRINT

B

B. DATA–LINE™ DISPLAY MODULES. Combines switches, indicators and message displays in an in-line modular package that complements basic DATA·PANEL Display System design. . .an information display device for computers, industrial control, peripheral equipment, etc. Modular in-line design permits intermixing of message display, incandescent and neon functions. Displays may be arranged in any sequence on .7" centers in a frame available in lengths to 4 feet. Frame forms front bezel and provides panel mounting hardware; lamps are replaceable from front or rear of panel. Full details are contained in brochure No. 599.



C

C. DATA–MONITOR™ ANNUNCIATORS. Feature for feature, the best annunciator buy on the market–1/3 the cost and 1/9 the space of conventional models. Only 6-3/4" high by 11-3/4" wide. . .holds up to 10 cards and 100 legends. . .comes ready to install and operate. Five different systems are available–ranging from simple lighted indication of off-normal points to supervised model with audible and flashing alarms. Memory logic in four of these systems insures operator awareness of intermittent alarm. These four systems also have a built-in ringback capability. Brochure No. 1019 has complete details.

TEC–LITE™, DATA·PANEL®, DATA–LINE™, DATA–MONITOR™, DATA–SCREEN® and MINI–TEC™ TEC, Incorporated

DATA–SCREEN® TERMINALS

These versatile CRT terminals provide low-cost communications between man and computer–fast, efficient, operator-oriented terminals for data communications networks. Three basic interfaces–high speed parallel, block mode and conversational TTY–plus a full complement of application-proved features and options are provided in 14 different models.

Series 400 terminals were introduced in 1970, and several thousand units are now in service throughout the world. The 400 Series comprises 11 different models offering parallel, serial, polling and TTY compatible and replaceable interfaces.

MINI–TEC™ terminals incorporate design concepts that have resulted in a highly versatile, yet compact, low-cost model. Like the 400 Series, these terminals interface with most minicomputers and provide high-speed data communication capabilities.

A low-cost TTY replaceable terminal is also available. Brochure No. 3003 contains information on the complete line of DATA–SCREEN® terminals.

DIGITAL MULTIMETERS

There's a low-cost, high performance Tekelec Digital Multimeter to meet virtually every lab, bench and production application. Each model has exceptional accuracy, resolution and sensitivity. Exceptional stability and reliability are provided by Tekelec's exclusive Poly-Tek™ conversion system which uses special custom integrated IC's in both the analog and digital circuits.

An outstanding feature of all Tekelec digital multimeters is their big, bright "Field Effect" liquid crystal display that reduces eye fatigue and reading errors. A recently added sensational feature, available as a no-cost option on all Tekelec digital multimeters, is our new Transflective Liquid Crystal Display which can be easily read in bright sunlight or in complete darkness.

Ask your Tekelec representative or contact the factory direct for detailed brochures covering every model.

TA 357 MULTEX

AN ENTIRELY NEW CONCEPT IN LOW COST, HIGH PERFORMANCE DIGITAL MULTIMETERS

Tekelec presents the TA 357 MULTEX, an entirely new concept in low-cost digital multimeters. With its low, low cost and extreme versatility and an easily portable 9½" x 5¼" x 2½" package weighing only 1¾ pounds, the MULTEX will prove to be as valuable to you as a pocket calculator. The MULTEX is a rugged, portable digital multimeter, providing all the measuring power you'll ever need and assures you of laboratory accuracy no matter where you use it.

Accuracy of the MULTEX is outstanding. As an example, the basic accuracy on the two lowest DC voltage ranges is: ±.1% ±1 digit. And with extra-high sensitivity on every function — 100 microvolts on both the DC and AC voltage functions, the MULTEX will always meet your exacting measurement needs.

Protection against over-voltage is built into every function. All 8 DC and AC voltage ranges are protected against overvoltages up to 848 Volts peak to peak, and the current ranges are doubly protected by both current limiting circuits and fuses. And on all of the resistance ranges, the MULTEX will take a full 220 VAC without damage of any kind.

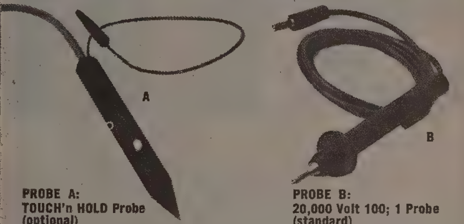
As an added standard feature, a unique test switch on the MULTEX causes the AC line voltage to be displayed without poking probes into the line socket.

TA 357 MULTEX $195

0023
MULTEX

- 7 Functions
- 27 Ranges
- Extra Long Life Field Effect Liquid Crystal Display with .4" High Numerals
- 10^{-12} MHO Sensitivity (10^{12} OHMS!)
- 10 pA Sensitivity
- AC Line Measurement Switch
- 20,000 Volts Measurement Capability, Safety Probe At No Extra Charge
- .05% F.S. +.1% R Basic Accuracy
- Automatic Decimal & Function Display

ACCESSORIES FOR TEKELEC MULTIMETERS

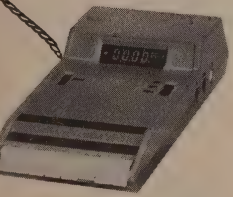


PROBE A:
TOUCH'n HOLD Probe
(optional)

PROBE B:
20,000 Volt 100; 1 Probe
(standard)

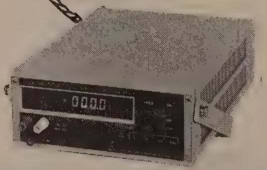
Now you can keep both eyes on your circuits with Tekelec's "TOUCH'n HOLD" probe. Just push the button of the probe and your Tekelec multimeter will take — and hold your reading for you.

TA 356 $289



- Nicad Battery Pack & Charger Standard
- 25 Ranges
- 5 Functions
- 3½ Digits
- Sensitivity: 100 µV AC & DC, .1 Ω, 100 nA
- .4" Extra Long Life Field Effect Liquid Crystal Display
- Illuminated Function Indicators
- LSI Circuits
- Pushbutton Operation

TA 355 $289



- 25 Ranges
- 5 Functions
- 3½ Digits
- Sensitivity: 100 µV AC & DC, .1 Ω, 100 nA
- Dual Reading Rate
- Pushbutton Operation
- Illuminated Function Indicators
- .4" Extra Long Life Field Effect Liquid Crystal Display

TA 365 $440

- 4½ Digits
- 25 Ranges
- 5 Functions
- Sensitivity: 10 µV AC & DC, .01 Ω, 10 nA
- Extra Long Life Field Effect Liquid Crystal Display:
  Pushbutton Operation
  Automatic Polarity & Decimal Placement
- Isolated BCD Output & Battery Operation Optional
- Dual Reading Rate
- LSI Circuits

OVER 100,000 STRONG

Every month over 100,000 buyers and specifiers like yourself receive Electronic Products Magazine . . . that makes us the largest electronics magazine around. And we're the largest for a darn good reason . . . we give you what you need: a practical editorial approach . . . one that's application and new product oriented. Editorial that offers solutions to the problems you face in your everyday task of designing and building electronic systems and subassemblies. The type of information you can put to use now.

If you're not getting EPM . . . why not write our circulation manager for a qualification form and join the over 100,000 strong.

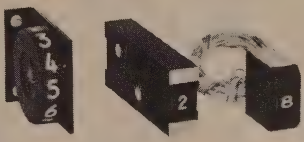
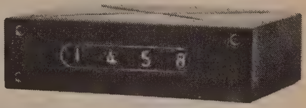
Write or phone today for detailed bulletin and stock list.





VERNIDEX MINIATURE

Vernitech has fully qualified hermetically sealed units to military specs with regard to:

- Altitude
- Temperature
- Vibration
- Shock
- Salt Spray
- Sand/Dust
- Fungus
- Explosion
- Acceleration
- Radio Interference
- Life
- Fogging

ALL MODELS AVAILABLE WITH FULL LOGIC SELF-CONTAINED—ACCEPTS BCD INPUT

VIBRATORS

VERNITRON CORP.

The VERNIBRATOR is an electro-mechanical vibrating device originally designed to eliminate stiction from instruments such as altimeters, etc. The Vernitech vibrator produces exceptionally High-G forces over 10,000 hours of failure and maintenance-free operation, while consistently attaining reliable low-voltage operation.

Consult the factory for either standard or custom-made designs.

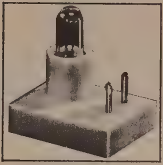
These lamps may be mounted on a variety of simplified terminals. AMP Inc., Harrisburg, Pa., makes several types.



Plug-in module activates photo-electric sensor in high speed check sorter.

Molded base permits bending lead wires at acute angles.

The molded base lamp provides important advantages that simplify production and contribute added reliability to the end product. The molded base is permanently bonded to the bulb. It replaces the previously cemented-on metal base. The former receptacle that had to be wired into the circuit is completely eliminated. The molded base lamp is self-mounting. In fact, the Tu-Pin lamp can be applied with automated equipment.

The molded base technique makes it possible to provide a wide variety of lamp packages—built-in key ways, plug-in types, unusual positioning of the leads and multi-purpose configurations.

Strip-mounted, grain-size, 21-mil lamps snap into molded plastic holder to form a condition monitor for computer circuit boards. Lamp sockets are numbered to correspond to individual circuits. Space for test probe contacts is provided. Units can be operated in either normally "on" or "off" condition and can be wired to a door switch or test push button.

AD-MU AD-VANCE MAGNETICS SHIELDING

MAGNETIC SHIELD COSTS REDUCED

Ad-Vance Magnetics, Inc. already owns tooling for just about every type of magnetic shield used during the past 20 years. Such existing tooling could cut your shielding costs substantially. Or, our Magnetic Shielding Specialists will design and fabricate an AD-MU shield to your precise performance requirements.

AD-MU FOILS PROVIDE ECONOMICAL SHIELDING

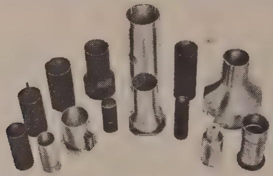
1. Cut and contour in minutes to exact desired shape.
2. Can eliminate costs of designing and manufacturing pre-fabricated shields in many instances.
3. Excellent for hard-to-get-at places.
4. Ideal for experimental applications to quickly determine exact amount of shielding required.
5. Useful in many production applications. Permit placing magnetically reacting components closer, compacting assemblies.

Heat treated; ready for instant use. Delivery from stock.

Widths: 4″, 15″.

Thicknesses: For AD-MU-78, .002″ (4″ width only), .004″, .006″, .010″. For AD-MU-00, .004″ only.

AD-MU-78 OR 80 HIGH PERMEABILITY SHIELDS FIT 312 TYPES OF PHOTOMULTIPLIER TUBES



For your special application or specific magnetic environment, our engineers can either modify a stock shield or custom design a shield to your exact requirement.

AD-MU SHEET STOCK — DELIVERY FROM STOCK

Order Low (AD-MU-00), Medium (AD-MU-48), and/or High (AD-MU-80) Permeability Stock as Required.

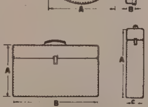
For the convenience of those preferring to design and manufacture magnetic shields in-house. Easy to work: bend, stamp, draw, finish, etc. on ordinary sheet metal working equipment. SHIELDS MUST BE HEAT TREATED before finishing by plating, MIL spec painting, etc.

Sheet dimensions: 30″ x 120″.

Thicknesses: .014″, .020″, .025″, .031″, .040″, .050″ and .062″.

STURDY AD-MU TAPE DATA PROTECTORS

1. Assure fidelity by keeping vital recorded data on magnetic tapes free from distortions caused by unforeseen external magnetic fields.
2. Minimize erasure accidents during safekeeping or transport.
3. Deter the covert saboteur or vandal.
4. Invaluable insurance against possible expensive or irreplaceable losses.



AD-MU CRT SHIELDS

Eliminate the reactive effects of external magnetic fields on the electron beam. Contact our Engineering Department for help in designing and manufacturing the best shield for your application.

Ad-Vance Magnetics, the Old Firm with the New Name, is the industry's largest, oldest and most experienced firm specializing in magnetic shielding. Our shielding is everywhere: off-planet in spacecraft and satellites, and planet-wide in exacting industrial, military, laboratory and consumer applications.

AD-MU CUSTOM FABRICATED SHIELDS FOR COMPONENTS AND SYSTEMS

From the simplest component to the most complex system, Ad-Vance Magnetics can design and make the shields you need . . . for magnetic isolation test chambers, for low field research, magnetic shielding components required in systems (such as CRTs), transformers, motors, tachometers, reed relays and computers, dewars for cryogenic or geophysical research, video cameras, scan converters, etc.

COMPLETE FACILITIES IN 2 LARGE MODERN PLANTS

Up-to-date equipment for all types of metal forming, heliarc and spot welding, processing control of heat treating and finishing . . . complete in-house tool room . . . in-house quality control . . . experienced engineering and design services unequalled in the industry.

PHYSICAL CHARACTERISTICS OF AD-MU ALLOYS

(FORMING QUALITY — NOT ANNEALED)

	AD-MU-80	AD-MU-78	AD-MU-48	AD-MU-00
density (grams/cm³)	8.74	8.21	8.20	7.80
coefficient of expansion per degree C (20°/100°)	12.30 x 10^{-6}	12.42 x 10^{-6}	9.38 x 10^{-6}	13.10 x 10^{-6}
tensile, strength (lbs/in² x 10³)	99.0	85.0	73.0	45.0
yield point (lbs/in² x 10³)	35.0	32.5	29.5	28.0
hardness (rockwell B)	65/80	65/75	65/75	20/40
modulus of elasticity (lbs/in² x 10⁶)	32.0	30.0	24.0	29.5
melting point degrees C	1450	1470	1425	1525
shear point (x 10³ psi)	—	42.75	—	35.00
elongation (% in 2″ section)	32	35	33	—

AD-MU ALLOYS PROTECT PERMANENTLY

- Will not saturate when properly used
- No excessive loss of permeability from shock
- Relatively stable permeability characteristics after final anneal, avoiding the expense and inconvenience of regularly repeated annealings
- Minimum retentivity for any alloy of a given permeability.

Ad-Vance engineers are magnetic shielding specialists. Contact our Engineering Department for help with your current magnetic shielding problems. Request Ad-Vance's complete 16-page catalog featuring advanced shielding techniques and components.

SPECIFY "ARNOLD" FOR YOUR **PERMANENT MAGNET**

Arnold permanent magnets are available in all types of Alnico material, in sizes ranging from large castings weighing over 80 pounds to very small sintered parts weighing less than one gram.

Alnico 5 can usually be depended upon to deliver the greatest energy product to the magnetic circuit per weight of magnet material. It is therefore generally the first choice for a magnetic material except where special physical considerations are paramount. Modified or premium grades are also available, such as Arkomax 800, a crystal-oriented material used where size and weight must be reduced without loss of energy.

Special assemblies such as rotors, traveling wave tube magnets, magnetron magnets, etc. may be supplied in an aluminum jacket to facilitate mounting and supply an added protection to the magnet.

Large magnet assemblies may be supplied for focusing mass spectrometer and other measuring applications where a high degree of stability and uniformity of field is required.

Many sizes and types of Alnico magnets are carried in stock for immediate delivery.

ALNICO 8 Available from Arnold in production quantities, Alnico 8 possesses the highest coercive force of all Alnico grades, as well as a high energy product and a relatively low temperature coefficient. It is especially suited for traveling wave tube periodic focusing applications. Gap flux densities greater than 1000 gausses are attainable in tubular-type straight field focusing magnets. Alnico 8 is also recommended for applications which involve strong demagnetizing fields, or where space considerations dictate the use of a short magnet.

ARNOX 5 Arnox 5 is a ceramic permanent magnet material composed of highly oriented barium ferrite. It has many times the energy product of Arnox 3 and is comparable in many applications to Alnico 5. Because of its high coercive force, its use is recommended in applications where a short magnetic length is desirable or where extremely high demagnetizing forces are encountered.

ARNOX 7 is a magnet material which was developed primarily for D.C. motors. It combines high energy with very high resistance to demagnetization over a wide range of temperatures.

ARNOX 8 is a premium quality ferrite magnet with the highest magnetic energy of all Arnox magnet grades. It is used where great magnetic efficiency and space-saving are desired. In addition to the higher flux density available from this magnetic material, it also provides a very high resistance to demagnetization.

SILECTRON C, E, O AND DISTRIBUTED GAP CORES Precision-rolled Silectron strip in 1, 2, 4 and 12 mil thicknesses. They are supplied in a wide variety of shapes, and in sizes from a fraction of an ounce to several hundred pounds. In addition to standard transformer applications, they may also be supplied for special applications such as saturable reactors, instrument transformers and pulse transformers.

Distributed Gap Cores reduce watt loss by 30%, exciting current by 70% and cost by 10% over conventional 12 mil C cores of the same size and weight. Made of the best commercial grades of .012″ grain-oriented silicon steel, cores are available in 36 basic sizes for power transformer and reactor applications.

Over 1,000 stock cores are listed in the Arnold Silectron catalog. A wide selection of preferred sizes are stocked for immediate shipment.

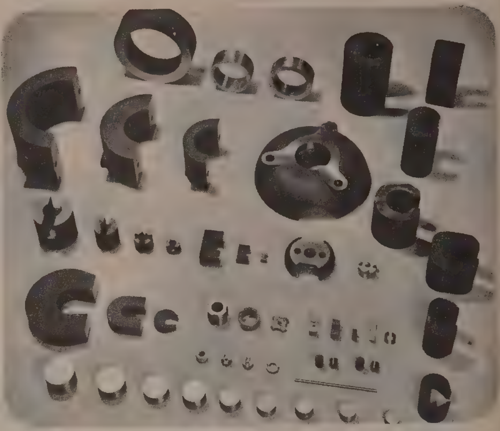
TAPE WOUND CORES OF HIGH PERMEABILITY MATERIALS Arnold tape wound cores are available made of Deltamax, 4-79 Mo-Permalloy, Supermalloy, Mumetal, 4750 Electrical Metal, Silectron, or the new rectangular-loop material, Supermendur. All except Supermendur cores are available in standard tape thicknesses of ½, 1, 2, 4 or 12-mils.

Toroidal cores are made in 30 standard sizes with protective nylon or aluminum cases. Special sizes produced to individual requirements. Wide selection of Deltamax, Square Permalloy and Supermalloy type 6T cores (aluminum cased, oil filled, heremetically sealed and epoxy coated) carried in stock for immediate shipment.

BOBBIN CORES Arnold bobbin cores are available in a wide range of sizes, tape thicknesses, widths and number of wraps to suit the ultimate use of the core in electronic computer assemblies. Magnetic materials usually employed are Deltamax and Square Permalloy in standard thicknesses of 1, ½, ¼ and ⅛ mil. Bobbins are supplied in ceramic or stainless steel.

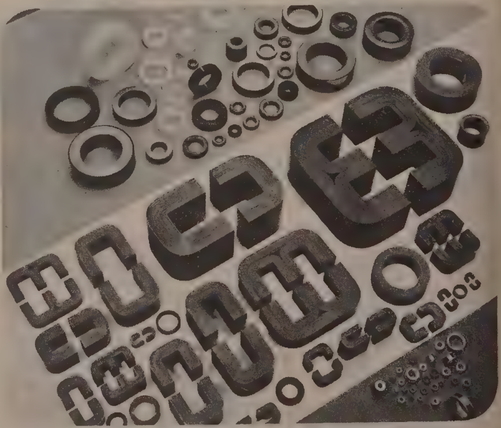
MO-PERMALLOY POWDER CORES Available in a wide range of sizes, from .140″ OD to 5.218″ OD. They are given various types of enamel and varnish finishes, some of which permit winding with heavy Formex insulated wire without supplementary insulation over the core.

These powder cores are supplied in standard permeabilities of 14, 26, 60 and 125 Mu; high-permeability cores of 147, 160, 173, 205, 250, 300 and 350 Mu are also available in all sizes. They provide constant permeability over a wide range of flux density, and in many cases may be furnished stabilized to provide essentially constant permeability over a specific temperature range. Preferred sizes carried in warehouse stock for immediate shipment.



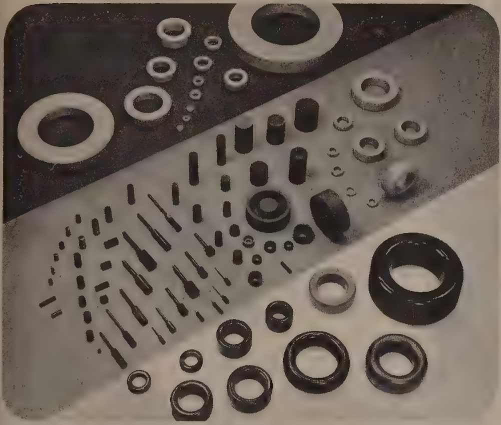
Typical group of Arnold permanent magnets, both cast and sintered types.

Typical group of permanent magnet assemblies.

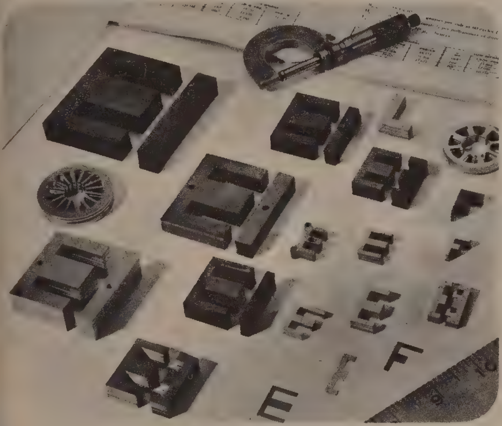


Top to bottom: Tape wound cores, Silectron C, E and O cores, and bobbin cores.

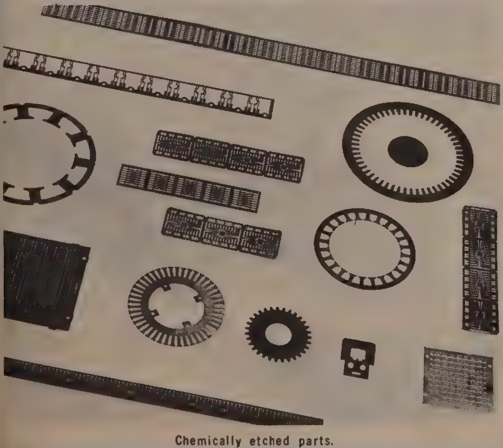
AND OTHER **MAGNETIC MATERIAL** REQUIREMENTS . . .



Powder cores.



Laminations of silicon and nickel-iron.



Chemically etched parts.

IRON POWDER CORES A wide selection of cores is available from simple cylinders to special cores of complicated design. The line includes all standard types of threaded cores, cup, sleeve, slug and cylindrical insert cores as well as a series of iron powder toroids conforming to the standard sizes adopted by the Metal Powder Industries.

SOFT FERRITE CORES Arnold Soft Ferrite cores are available in a wide range of shapes and permeabilities. Threaded cores, slugs, toroids, beads, E, & U-shapes and pot cores are produced in many sizes from standard tooling. Permeabilities range from 40 to 200 for nickel zinc ferrite and 400 to 3000 for manganese zinc ferrite. Higher permeability materials are currently under development.

MSS IRON POWDER CORES MSS powder cores have a very high electrical resistivity combined with a lower magnetostrictive noise than any other commercial iron powder even when cores are operated at saturation flux densities. They are moderately priced and are available in a wide range of sizes.

LAMINATIONS AND FORMED PARTS Arnold produces a wide selection of silicon-steel, nickel-iron and cobalt-iron laminations for motors and transformers. Thin-gauge laminations (1, 2 and 4-mil thicknesses) of high-permeability materials are specialties. A complete line of transformer cans and hardware is available, including Mil-T specification. Many sizes and types of magnetic shields are available or can be fabricated to your exact requirements from Mumetal and other shielding materials. Shielding materials are also available in bulk form, without annealing.

PHOTO-CHEMICAL FABRICATION This technique provides a wide variety of stress-free, burr-free parts. It also provides economical fabrication where expensive tooling is not justified. A wide range of materials is available for applications such as lead frames, recording head laminations, and other applications.

PRECISION FOIL AND STRIP PRODUCTS Thin and Ultra-thin metals and alloys are custom processed in one of the newest and most modern rolling facilities in the world. Materials such as Aluminum, Brass, Copper, Magnetic Alloys, Stainless Steels and others are produced to individual requirements of gage, width, hardness, flatness, grain size, edge and surface condition.

VICALLOY Vicalloy is a carbon-free permanent magnet alloy containing about 10% vanadium, 50% cobalt and the balance iron.

Vicalloy may be fabricated in the form of castings, hot rolled bars and forgings, or cold rolled strip, wire and tubing. After suitable heat treatment, the material is quite readily machinable. Vicalloy is available on special order in bar, strip and thin tape for recording purposes.

2V PERMENDUR A ferromagnetic alloy of cobalt, vanadium and iron that possesses high flux density saturation properties. Its magnetostrictive properties are useful in many transducer applications.

A NEW CUSTOMER SERVICE

Ogallala Electronics, the newest Arnold division, offers a new service designed to meet special requirements for alnico and ceramic permanent magnet and ferrite customers. If you want fast delivery on prototype or production quantities, call today for complete information or costs estimates. Ogallala Electronics can offer you

Close tolerance grinding and shaping
All shapes and sizes
Large inventory of stock parts for immediate delivery
Engineering assistance
Competitive prices
Stringent quality control

Call Howard Harrington, Ogallala Electronics, (308) 284-4093, or write to 601 West First St., P.O. Box 59, Ogallala, Nebraska 69153.

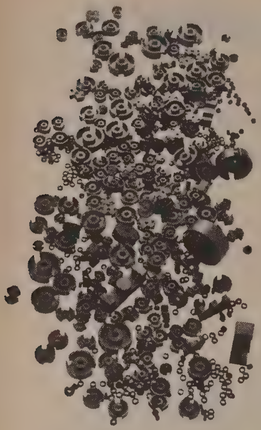
FERROXCUBE LINEAR-FERRITE MAGNETIC CORES



CHOOSE the exact shape, size, and performance combination you require in a magnetic core from among the thousand-odd in-stock, Ferroxcube Catalog-Standard ferrite designs. Then get the cores, in the quantity you need, direct from your local Ferroxcube Stocking Center. There are six of them, across the country — (see bottom of page). As the largest single source of ferrite products, and the largest volume supplier, we maintain a continuously available stock of cores that runs high up into the millions. What's more, we offer the broadest, most complete line in the industry:

. . . Six different ferrites . . . Six different shapes . . . Graduated sizes in every shape . . . Ungapped, fixed-gap, and adjustable-gap types . . . Operating ranges from power frequencies to >200MHz.

STANDARD FERRITES

Of the scores of ferrite compositions developed in our laboratories, six distinctive types are represented in our Catalog Standard cores. Each is precision-formulated; it's properties are deliberately determined, are tightly controllable, and consistently reproducible, from core to core, and lot to lot. Each is the core material of choice in a range of applications; at times it is the only means by which a set of design objectives may be met. The primary characteristics of these premium ferrites are listed below, in Table I. Their availability in standard core shapes are indicated in Table II, and their initial permeability curves, as influenced by frequency and temperature, are plotted in the adjacent graphs for comparison. Characteristics and availability of the standard cores are detailed on the following three pages.

TABLE I. STANDARD-FERRITE CHARACTERISTICS

Parameters shown are typical values, based upon measurements of a 1″ toroid.

	3B7 FERRITE	3B9 FERRITE	3C8 FERRITE	3D3 FERRITE	3E2A FERRITE	4C4 FERRITE
(μ_o) Initial Permeability (±20%) at 25°C	2300	1800	2700	750	5000	125
(B_s) Saturation Flux Density at 25°C (Gauss) H = 2 Oersteds	3800	3200	25°C ⩾4400 100°C ⩾3300 (H = 3 Oersteds)	3800 (H = 5 Oersteds)	3600	3000
(TF) Temperature Factor (min.) (max.) (Temp. Range)	-0.6×10^{-6} $+0.6 \times 10^{-6}$ +20°C to +70°C	$+0.9 \times 10^{-6}$ $+1.9 \times 10^{-6}$ -30°C to +70°C		1×10^{-6} 3×10^{-6} 30°C to +70°C	$\pm 2 \times 10^{-6}$ +20°C to +70°C	$\pm 6 \times 10^{-6}$ 0 +5°C to +55°C
Recommended Frequency Range	Power frequencies to 300kHz	Power frequencies to 300kHz	Power frequencies to 300kHz	To 2.5MHz	Power frequencies to 300kHz	1MHz to 20MHz
Curie Temperature	⩾170°C	⩾145°C	⩾200°C	⩾150°C	⩾170°C	⩾300°C
Summary of Other Properties	Essentially zero T.C. Higher Q than 3B9, Higher permeability, permitting larger A_L values.	Linear, controlled T.C. over a wide temperature range, to compensate polystyrene capacitors.	High saturation. Low core loss material for power applications.	Linear, controlled T.C. over a wide temperature range, to compensate polystyrene capacitors.		Negative linear, controlled T.C. to compensate silver mica capacitors

FERROXCUBE

FERRITE POT CORES FOR PRECISION DESIGN AND PREMIUM PERFORMANCE IN TRANSFORMERS AND INDUCTORS ALL ACROSS THE ELECTROMAGNETIC SPECTRUM

Ferroxcube Ferrite Pot Core designs represent one of the most significant advances in ferromagnetic technology in the past two decades. They offer an almost classic combination of closely controlled characteristics that enables the circuit designer to achieve near-ideal performance, and to accomplish objectives that are impracticable by any other technique.

Inductors and transformers wound on ferrite pot cores, operating in the range from power frequencies on up to tens of megahertz, are superior to conventional magnetic-core components in so many ways that they should automatically be considered first in undertaking any magnetic design — small-signal transformers, pulse and broadband transformers, power transformers from mid-audio to the RF region, filters, and tuned circuits of every description. Because of the tight control maintained in the core's properties, and in its dimensions, the designer can count on high Q, high stability, and minimum volume. He can work to tight tolerances in his winding specifications, with the assurance of achieving target performance, with little or no trimming or adjustment.

Pot core construction lends itself admirably to automated production procedures in winding, assembly, mounting, interwiring, and PC board insertion — a fact which appreciably enhances the fundamental design efficiency, and the economy inherent in mass-production core and hardware prices.

STANDARD POT CORES

Figure 1. ·Pot Core Halves

Ferroxcube pot cores are manufactured in half-core sections as illustrated in Figure 1, in **eleven** standard sizes (from .282" to 2.657" O.D.), in six different ferrites (3B7, 3B9, 3C8, 3D3, 4C4, and 3E). They are available in three core-gap forms, as shown in Figure 2 in cross-section. Ungapped core halfs (PL00's) are available in all materials. In the fixed-gap version, (PA's) the height of the center post in one core half is reduced by machining to selected dimensions, providing various air-gap lengths, with corresponding variations in effective permeability (μ_e) and in inductance index (A_L). Adjustable-gap versions (CA's) are identical to the fixed-gap cores, but are furnished with a pre-inserted threaded nut, and an inductance adjustor pin that provides a 10-turn adjustment range of approximately 13% in the effective permeability of the core. The availability of the various combinations are indicated by x's, in Table IV, and their essential dimensional and mechanical characteristics are shown in Table III.

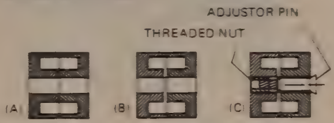

Figure 2. Internal Configurations of Ungapped (A), Fixed-Gap (B), and Adjustable-Gap (C) Pot Cores.

TABLE III. DIMENSIONAL AND MECHANICAL CHARACTERISTICS

POT CORE SERIES	O.D. (in.)	HGHT. (in.)	STANDARD BOBBIN WINDING AREA (in^2)	STANDARD BOBBIN MEAN LENGTH OF TURN (in.)
743	.282	.276	.0056	.47
906	.366	.212	.0053	.749
1107	.445	.264	.0083	.905
1408	.559	.334	.015	1.14
1811	.726	.428	.029	1.46
2213	.858	.538	.046	1.74
2616	1.024	.640	.063	2.08
3019	1.201	.754	.091	2.44
3622	1.418	.886	.116	2.92
4229	1.697	1.162	.217	3.39
6656	2.657	2.204	.620	5.118

Standard Delrin or Nylon bobbins are available for each of the 11 core sizes. For the more popular sizes, 2-section and 3-section bobbins are also obtainable, as well as printed circuit bobbins equipped with integral terminal pins. Standard hardware sets are available to provide surface mounting, PC board mounting, or panel mounting. (See page 4.)

NUMBERING SYSTEM FOR CORE IDENTIFICATION

All pot cores in the standardized sizes are identified by a part number that indicates many of the essential characteristics and the composition, of the core. The following is an example:

1811P	A100	3D3
Series (and size)	Inductance Index (Preadjustment)	Ferrite Material

1811P This Series number also indicates the core size in millimeters — in this case, 18 mm diameter, 11 mm assembled height.

A100 This indicates a preadjusted and/or adjustable pot core set, and the number following the letter "A" is the inductance Index (A_L) of the core set in millihenries per 1000 turns. (The preadjusted core set is termed a PA, and the adjustable set as a CA.) The A_L value of adjustable core sets is the value before insertion of the adjustor pin. (An adjustor pin always increases the effective inductance.) Cores with no A_L value indicated are ungapped and are termed P-LOO cores.

3D3 Designates the Ferrite material used in the core.

TABLE IV. MATERIAL AND GAP AVAILABILITY

NOTES

(1) The nine Pot Core Series from 905 through 4229 are standardized sizes in accordance with the International E.I.C. specifications. Series 743, and 6656 are special (non-standardized) sizes but are standard items of manufacture with Ferroxcube Corporation.

(2) The designations PL00, PA, and CA designate ungapped, fixed gap, and adjustable-gap core, respectively (see numbering system).

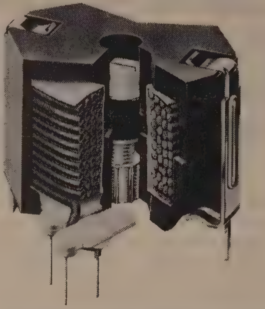
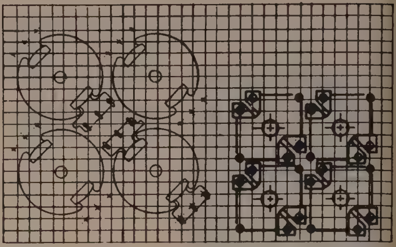
FERROXCUBE FERRITE SQUARE CORES

- *Almost 40% higher packing density than equivalent pot cores*
- *Three ferrite compositions to choose from*
- *Ungapped, fixed-gap, and adjustable-gap forms*

The RM6 square core system uses a specially designed printed circuit bobbin and is held together and mounted by two simple hardware clips. This unique core set allows for almost 40% higher packing density of core sets on a PC board, compared with conventional round pot cores. It is available in ungapped, fixed-gap and adjustable gap versions (see diagram on preceding page). Figure 3. compares the area occupied by the RM6 square core, and its pot core equivalent in performance (Series 1811).

A similar saving is achieved by the RM8 square core over the equivalent (Series 2213) pot core. Both models are available in 3B7, 3B9, and 3D3 ferrite, with a range of gap lengths available in each material. Single or dual-section bobbins, with 4 or 6 terminal pins are available for the RM6. 4, 8, or 12 pin single section bobbins are available for RM8 for direct PC board mounting.





Minimum Space Requirements for 18-mm Pot Core and RM6 Square Core.

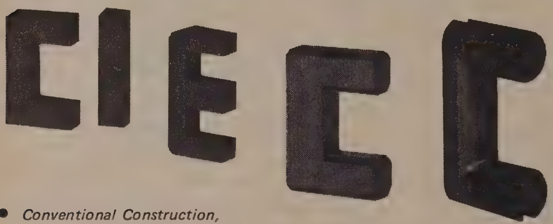
FERROXCUBE FERRITE E, U, AND I CORES

for Power, Audio, HF Inductor and Transformer Design



- *Conventional Construction, With Exceptional Performance*
- *E-E, E-I, U-U, and U-I Configurations*
- *Three Ferrite Compositions, Liberal Range of Sizes*

Ferroxcube Standard E, U, and I cores offer the convenience of employing conventional transformer and inductor winding techniques, the advantage of drastic reductions in eddy-current and hysteresis losses, as well as the uniquely precise control of magnetic, electrical, and dimensional properties afforded by ferrite materials.

The cores are all usable in E-E (or U-U) configuration. For certain models, a corresponding I core is available, offering an optional E-I (or U-I) configuration, as well. Standard bobbins, designed for installation on the center leg in E-E configurations, are obtainable.

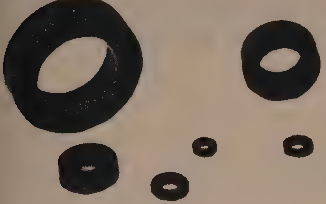
FERROXCUBE FERRITE TOROIDAL CORES
for Low-Level Pulse and Broadband Transformer Design



- *Highest Magnetic Efficiency of Any Core Configuration*
- *Thirteen Standard Sizes*
- *Six Standard Ferrite Compositions Available*
- *Uncoated, and Polymer-Coated Types*

The toroidal core offers the designer a magnetic efficiency higher than that of any other core configuration, due to its uniform cross-sectional area, and the absence of an air gap. The Ferroxcube Standard Toroid line is the largest in the industry, comprising thirteen sizes, and seven different ferrite compositions. The larger sizes are provided with an insulating lacquer coating; the smaller toroids (.135 to .375" O.D.) are available uncoated, or optionally with a poly-paraxylene type polymer coating that eliminates scraping of the wire during winding operations, with a consequent reduction of hi-pot breakdowns.

*Core is available uncoated, or polymer coated (EXCEPT: Cores of 3E3 ferrite are available only as coated toroids.) Part number shown is for coated core. To specify uncoated core when ordering, omit letter C from part number.

**Polymer coating, when specified, increases O.D. and Width, and decreases I.D., by .001" ±.0003".

***Available only as coated toroid. All 3E3 toroids will meet the A_L value specifications over the temperature range from 10°C to 60°C.

ACCESSORIES AND TECHNICAL LITERATURE

BOBBINS

Ferroxcube Standard Pot Cores may be wound and mounted in a variety of configurations, as shown at right. Standard Lexan, Delrin, or Nylon Bobbins are available for all models, some with 2 and 3 winding sections. PC bobbins, equipped with integral terminal pins for direct PC board mounting, are available for the more popular core sizes, as are hardware sets for mounting core assemblies on PC boards, panels, or chassis surfaces. Availability of these items in the various core Series are summarized in Table VIII below.

FERROXCUBE SHIELDING BEADS AND CHOKES

A convenient, simple, inexpensive means for obtaining effective RF decoupling, shielding, and parasitic suppression (without sacrificing DC or low-frequency power), for pennies per circuit. May be used in conjunction with small ceramic capacitors in damping circuits to provide additional rejection at the self-resonant frequency of the capacitor. Double-hole beads for twin-lead circuits, wideband 1½-turn or 2½-turn chokes, offer even better performance for a given space allotment. Five sizes, choice of four ferrite materials — ask for samples!

SERIES EC POWER E CORES

NEW FROM SAUGERTIES, N.Y.!

The Power E

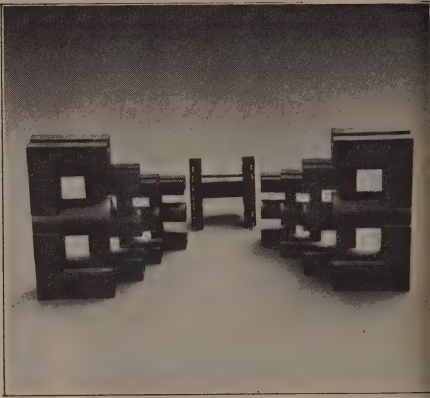
Ferroxcube's new line of EC-cores, designed specifically for switch-mode power supplies, inverters and converters, make transformer and filter design and fabrication easy. Representing a compromise between pot cores and the old-style square-legged U and I cores; they provide benefits not obtainable with either of these core configurations.

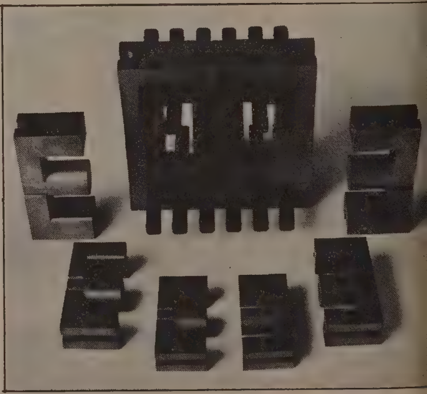
Ideally, any transformer operating at high flux densities and high frequencies should be completely screened to minimize external fields and radiation. Although this screening requirement is met by the pot core design, the slots place severe restrictions on the diameter of conductors that can be brought out. At the other extreme, the U and I core combination offers ease in winding and terminations but produces a high external field, particularly if an air gap is necessary.

These considerations have led to the adoption for the Series EC-cores of the round center-leg E-core design. This is virtually a pot core with the two sides removed and has the advantages of both the pot core and the U and I core, its external field being a compromise between the two. Because it has a circular cross-section for the center leg, the turn length is minimized, an important consideration in reducing copper losses. Further, the winding is more compact, since bowing is eliminated, reducing leakage inductance.

The new line of ferrite cores has been designed for use in switched-mode power supplies, inverters and converters. The core design has been optimized for operation in push-pull circuits, generally considered to be worst case, at frequencies up to 50 kHz. At present, the line comprises four sizes: Types EC-35, EC-42, EC-54 and EC-72 covering transformer throughput power to 1 Kw.

An added plus for the new core line is standardization and the resultant availability of associated accessories. A line of complementary bobbins is available for the EC-core series. In addition the cores are slotted to accept studding, thereby facilitating assembly and mounting and avoiding the need for special clips and attachments.





SERIES EC
POWER E CORES

This core type is:

- manufactured in the following material —3C8
- available with following optional accessories: single section standard bobbins for all sizes; printed circuit bobbin for EC-35.

Electrical parameters are expressed in the MKS System.

All terms and symbols used are defined in the Glossary at the rear of the Ferroxcube catalog.

Characteristics of the ferrite material used are described in the Materials section at the front of the catalog.

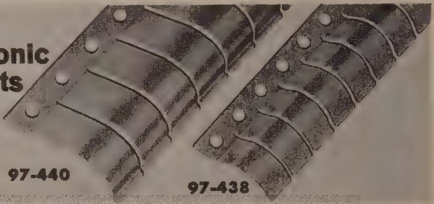
electronic gaskets



97-440
97-438

These standard beryllium copper contact strips offer ideal RFI/EMI shielding of doors and movable components in electronic screen rooms, trailers, computers and communication equipment.

They have been scientifically designed for wiping closures, but are also useable in compression. Moreover, these contact strips feature extremely good endurance life as well as a high dynamic range. In tests, attenuation up to 100 dB has been measured at 400 MHz and 10 GHz. Fastening of strip is usually accomplished using screws or rivets. Soldering is optional.

For pricing, please advise catalog number, total footage and surface finish required.

tions that require high shielding effectiveness despite frequent opening and closing of the cabinet.

Series 97-520 when tested per Military Standard MIL-STD-285 for electromagnetic shielding, showed superior performance under increased compression. It is supplied in standard 16" lengths, and in a variety of surface finishes.

*Patented

Typical Performance Capabilities*

*An independent testing laboratory has indicated the following performance:

Frequency	*Field*	*Shielding Effectiveness (Fully Deflected)* **97-520** at .045" Gap	**97-520** at .090" Gap
14 kHz	**Magnetic**	63dB	38dB
200 kHz		81	57
1 MHz		>92	>92
1 MHz	**Electric**	>126	>126
18 MHz		>120	>120
400 MHz	**Plane Wave**	,118	111
1 GHz		78	100
10 GHz		92	82

Approx. Pressure Required in Pounds/Linear Foot	97-520
Deflected to .090" height	26 lbs./ft.
.060" height	37 lbs./ft.

Standard finishes available

Add proper suffix to catalog number

-A	**-Bright (stock)**	**-G**	**-Gold**

Other finishes available on special order.

geometry of the strip design, continually compressed, further assists in strengthening the bond. Soldering or mechanical fastenings are completely eliminated. Shielding effectiveness of 97-500 has been proved greater than 46 dB at 14 kHz magnetic and 108 dB at 10 GHz plane wave.

STICKY FINGERS are unaffected in temperature ranges from —65 F. to 225 F. The adhesive meets salt spray, shock and humidity cycle tests, and complies with MIL-D-8634, MIL-N-25076 and MIL-P-19834A.

Furnished in approximately 24" lengths, cut to the center of nearest slot.

Typical Performance Capabilities

Frequency	*Field*	*Shielding Effectiveness* At 1/16" Gap **97-500**	At 1/8" Gap **97-500**

At 1/8" Gap: 16 lb/ft

sticky fingers

Twist Series

Self-adhesive beryllium copper contact strips with scientific twist design offer narrower-than-ever electronic gaskets for general shielding applications where space is at a premium.

Series 97-555 single edge contact strip measures only ⅜" wide, yet shielding effectiveness is 71 dB at 14 kHz magnetic and 102 dB at 10 GHz plane wave. Ideal for all types of panels or electronic enclosures.

Series 97-560 strips for cabinets with panel-divider bars. Unique double edge design, ½" wide, permits panels to be easily removed and replaced without damage to the installed strip.

Typical Performance Capabilities

Frequency	**Field**	**Shielding Effectiveness (Fully Deflected)** **97-555**	**97-560**
14 kHz	**Magnetic**	**71dB**	**≥75dB**

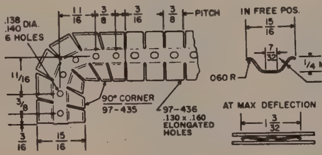
.015" height	**67 lbs./ft.**	**72 lbs./ft.**

Balanced Finger Strips offer 90° corners and quick spring clip fastening.

When contact strips are required for rectangular openings or structural joints, they can be quickly and easily installed in field or factory.

Matching 90° corners provide a perfect fit and spring clips hold the strips firmly in place. (No special tools or soldering required.) Result: More simplified design and construction of cabinets and enclosures.

These strips feature a mechanically balanced design to provide high dynamic range, long endurance life and multiple lines of contact under relatively light pressure. Attenuation of more than 100 dB at 200 kHz, 400 MHz and 10 GHz has been measured for a single, rectangular enclosure using Series 97-436 gaskets.



Spring Clip Fastener

Designed for use with Series 97-436 and Series 97-435 finger strips. Permits full strip compression, yet is easily installed without special tools. Fastener also permits temporary lifting of gaskets for cleaning of contact surfaces.

finger contact strips

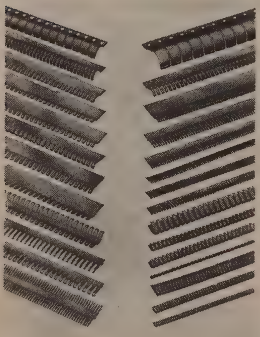
of MICRO-PROCESSED *beryllium copper, alloy 25*

for grounding and shielding in high-frequency equipment . . . for forming large-diameter contact rings

A wide variety of beryllium copper finger contact strips provides engineers and designers with flexibility in the solution of grounding and shielding problems. Various lengths, widths, contours and hole locations are possible for many of the standard catalog items shown here.

Engineering Design Kit Available

An Engineering Design Kit is available to permit the engineer the utmost latitude in his search for the exact strip configuration to effectively meet his needs. Each assortment contains at least 34 items listed on Pages 10 through 13. Includes data sheet on elastic performance of finger strips.



Order assortment by Number 97-272.

HIGH PERMEABILITY FOIL — SURFACE PREPARED FOR CHEMICAL ETCHING

TELCON METALS LTD. is one of the largest manufacturers of nickel-iron and cobalt alloys for magnetic applications. Their fully integrated facilities provide raw materials and fabricated components covering the whole range of commonly used soft magnetic materials.

HIGH PERMEABILITY TOROIDS— are available in all materials listed in the accompanying table in standard tape thickness.

PHOTO-ETCH — high permeability alloys for recording and playback head laminations are available.

SEE OUR AD ON Page 1•2356

TELCON HIGH PERMABILITY SOFT MAGNETIC ALLOYS AND FABRICATED TOROIDS

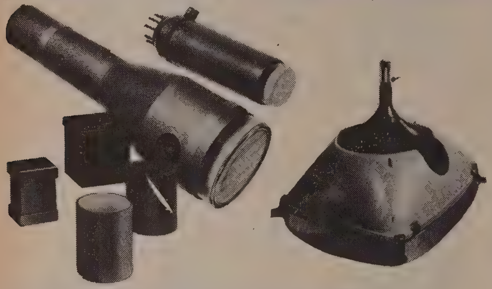
MAGNETIC SHIELDS UP TO 30″ DIAMETER FOR CATHODE RAY TUBES & TRANSFORMERS by Telcon Metals Ltd.



MELTING, ROLLING, FABRICATING, ANNEALING FROM START TO FINISH IN ONE FACILITY

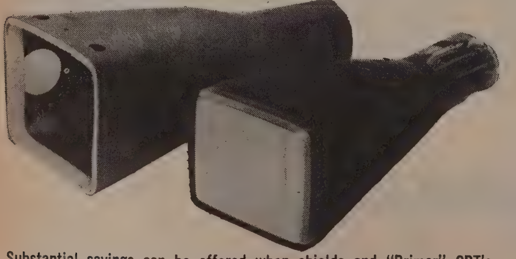
Telcon Metals, Ltd., has its own in-plant facilities to handle every phase of the magnetic shield manufacturing process from start to finish. This means 100% Telcon supervision all the way — from the melting and rolling of the raw material to the fabrication and annealing of the magnetic shield. Telcon's total production method is based on a century of experience in the manufacture of alloys. All these factors are your assurance that you get a sensibly priced, high quality product.

A NEW CONCEPT IN MAGNETIC SHIELD CONSTRUCTION

Specially developed for quantity production of high efficiency complex shields, new TELFORM construction utilizes precision drawn segments to drastically reduce welded seams. The result is extra close fitting shields with improved shielding characteristics. This new technique is applicable for CRT tubes up to approximately 20″ long. No premium charge even though dimensions, finish and appearance are far more uniform throughout batches than conventionally fabricated shields. Rapid delivery after initial tooling. Available in 80%, 50% and 36% nickel-iron alloys.

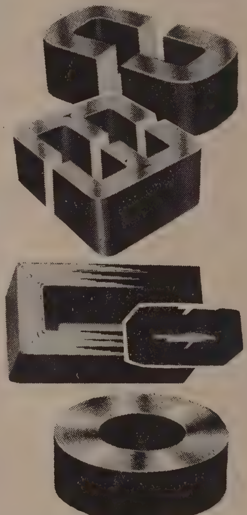
Extremely Competitive Prices on Custom Shields.
Send for Illustrated Catalog and Ask for a Quotation.

OTHER TELCON PRODUCTS
- Thermostatic Bimetals
- High Permeability Strip, Rod & Wire for Component Manufacturing
- Glass to Metal Seal Alloys



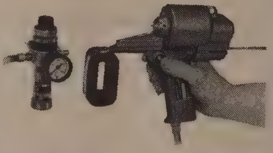
Substantial savings can be offered when shields and "Brimar" CRT's are purchased as assemblies. Also see CRT's described in EEM Page 1•2356

E, C AND TOROIDAL TAPE WOUND CORES BY TELMAG



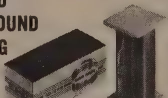
- Grain oriented Silicon Steel Cores.
- Made to EIA Spec. RS217 and trade specifications by our British assosiate TELCON MAGNETIC CORES LTD. . . . one of the largest manufacturers of grain oriented silicon steel components.
- Available in all American standard or special sizes to American core numbers. Popular types available from New York warehouse for immediate delivery.
- Sold at prices that help you solve your constantly rising cost level problem.
- Produced by one of the largest manufacturing facilities in the world.
- Now, also available, LL distributed gap cores for small transformers where temperature and/or gap VA may be problems. Can replace 4 to 6 mil cut cores, 6 mil laminations, and sometimes Ni-Fe laminations.
- Toroidal cores available in 2, 4, 6 and 12/13 mil tape thickness. Cores can be supplied impregnated or edge bonded for improved rigidity. Also available gapped or cut.

"C" CORE COMPRESSED AIR BANDING TOOL by TELMAG



Manufacturing rejects caused by variations in banding of "C" transformer cores can now be eliminated. The new "C" core Compressed Air Banding Tool provides consistent banding stresses in assembly-line operation. By making cores useful which were formerly rejected, the tool soon pays for itself.

TELSHIELD WRAP-AROUND SHIELDING FOIL



Shield components efficiently, simply, from unwanted signals with easy-to-use Telshield. Available in 0.001 in.-0.010 in. thickness tape, in widths of $\frac{3}{32}$ in-6 in. Special handy packs for laboratory and R & D use.

THERMOSTATIC BIMETALS BY TELCON METALS, LTD.

We offer a complete selection of Telcon thermostatic bimetals for various temperature ranges and environments. Their varied mechanical properties, hardnesses, thermal activities, and thermal and electrical conductivities make it easy for the user to select the right one for his particular requirements. Available in thicknesses from .004″ to .125″ and widths as small as $\frac{1}{16}$″ in coils and flat lengths.

Full Coverage

ITT Thermotech Surrounds You with Service And Quality

At ITT Thermotech you can expect complete company involvement with your custom molded plastic job from start to finish. Each department is staffed with individuals who, in total, account for many years of experience in precision plastic molding. These people cover your job completely through estimating, mold design, raw material selection and control, manufacturing, quality control, to on-time delivery.

In addition to its ability to mold high tolerance, intricate parts, ITT Thermotech is capable of offering an Engineering service. And, even though we don't literally serve your order on a silver platter, we place a high degree of emphasis on giving you the excellent service you expect from ITT Thermotech.

Call us for an estimate. And find out what we mean by "full coverage".

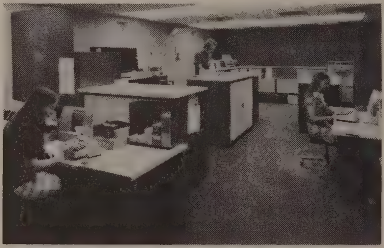
ITT THERMOTECH

1202 South Fifth St., Hopkins, Minnesota 55343, 612-938-7671 • 3200 Tyrone Blvd., St. Petersburg, Florida 33710, 813-347-2191

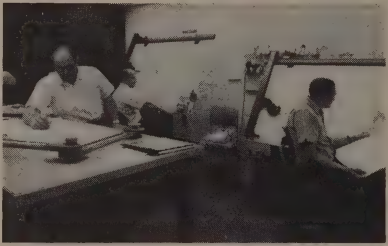
People make the big difference at ITT THERMOTECH

QUALITY CONTROL—Constant attention and adherence to strict quality control assures consistent part characteristics from run to re-run, press to press and within each lot.

MANUFACTURING—Over 200 injection, compression and transfer presses, from one ounce to 25 ounces and as large as 450 tons, offer a wide latitude for short and long runs.



COMPUTER FACILITIES—In-plant computer facilities are used for work order analysis, raw material control and production scheduling to insure fast, on time delivery of orders.



MOLD DESIGN—Skilled mold designers translate customer specifications into mold designs that meet customer's exact part cost, tolerances and quality requirements.

ITT THERMOTECH—The Full Service Molder—For a quarter of a century ITT Thermotech has served the nation's industrial and military markets with high quality custom and stock precision moldings. Employing close to 500 employees, Thermotech offers customers complete molding facilities for thermoplastic, thermoset and fluorocarbons plus secondary operations.

All tool room, manufacturing and inspection facilities have been approved by government agencies.

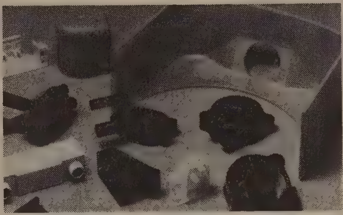
ITT Thermotech now encompasses these former subsidiaries and divisions:

- Booker Wallestad
- Thermotech Plastics
- Florida Division
- Wilcox Products
- Thermotech Coil Forms and Components

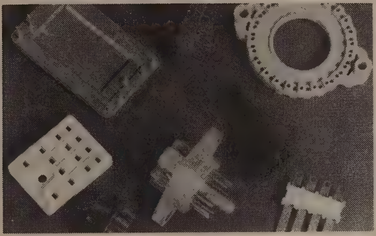
Other secondary services available:

- Silk Screening
- Hot Stamping
- Secondary Finishing
- Heat Sealing
- Sonic Welding
- Mold Maintenance

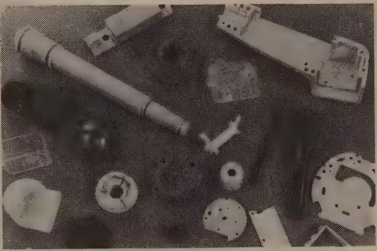
Precision makes the big difference at ITT THERMOTECH



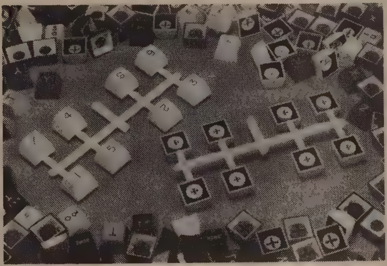
CASES AND HOUSING—Miniature or large cases and housings of thermoset, thermoplastic or fluorocarbons materials with a wide variety of characteristics and configurations are available in both short and long runs.



INSERTS—Highly automated equipment in both primary and secondary operations produce low-cost, precision parts with inserts for electrical/electronic components.



INTRICATE PARTS—Intricate configurations and shapes in a wide variety of plastics are commonplace challenges to design and production personnel.



TWO COLOR KEYTOPS—An extensive library of stock and custom designed legends are available to meet all but the most unusual of alphanumeric and conventional control keytop needs.

COILS AND BOBBINS—Years of experience bring superior technical know-how to the design and manufacture of simple or intricate shapes and sizes, thin or heavy walled coil forms and bobbins.

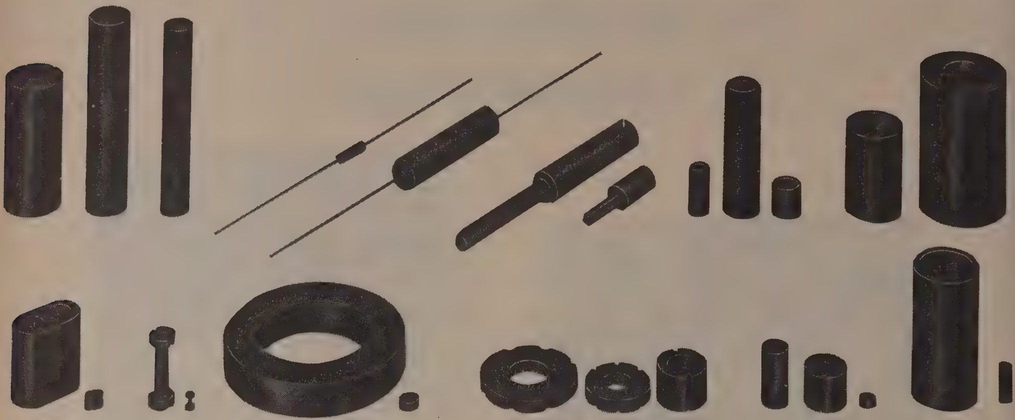
K KRYSTINEL FERRITE CORES



Krystinel Corporation manufactures a complete line of soft ferrite materials. These ferrites are custom made within technological limits to meet desired electrical and mechanical specifications.

Krystinel Corporation maintains a large inventory of ferrites in standard sizes and shapes as detailed in its catalog. In addition, Krystinel will tailor-make ferrites to your electrical and mechanical specifications. Copies of our catalog, as well as samples and information, may be obtained by contacting Krystinel Corporation.

SLUGS: .035 to .500″ diameter by .062 to 2″ long.

COIL FORMS: .055 to .260″ diameter x .187 to 1.250″ long.

INSERT TUNING CORES: .157 to .370″ diameter x .375 to 1.25″ long.

THREADED CORES: .129 to .303″ diameter x .187 to 1.500″. Threads: 6-32, 8-32, 10-32, ¼-28, 5/16-28. Metric: 4 x 0.5, 4.5 x 0.75, 6.3 x 1.0mm.

CUP CORES: .100 to .715″ diameter x .485 to 1.000″ long.

BALUN CORES: Various shapes: binocular, flat, chip, and round with 2 to 6 holes. All in many sizes.

BOBBINS: .060 to .375″ major diameter x .100 to .750″ long.

TOROIDS: .080 to 1.350″ diameter x .025 to .500″ height. (see next page)

WASHERS: .475 to .715″ diameter x .067 to .125″ long.

SHIELD BEADS: .050 to .500″ diameter x .062 to .500″ long. (see next page)

SLEEVES: .098 to .725″ OD x .150 to 1.125″ long.

GENERAL INFORMATION

QUALITY CONTROL PROGRAM — In order to maintain our consistently high level of quality and precision workmanship, our quality control procedures have been designed to comply with the inspection standards of Military Specification MIL-Q-9858 or at your request, a more rigid sampling plan.

TOLERANCES — Standard tolerances are ±.010 unless otherwise specified.

PLATING/FINISHING — All plating processes with the exception of Hot Tin Dip are available.

HEAT TREATING — Standard heat treating at Micrite is Fast and Slow Cycle Hydrogen Annealing.

TOOLING CAPABILITIES — At Micrite a complete tool and die facility is at your disposal. Our standard line of enclosures is increasing every day. If you have a requirement not listed in our catalog, please feel free to contact us. If it can be made, we can make it for you.

HOW TO ORDER

ORDERING ENCLOSURES

In order to assure that you receive the correct part and to avoid delay in deliveries caused by misunderstanding, the steps outlined below should be followed when placing an order for Micrite parts:

1. Specify the correct Series Number for the part you want to order. The Series Number is the number in the first column on each catalog page describing Micrite Enclosure Series.
2. To the Series Number add the number representing Maximum Depth of the part. Maximum Depth is found in column 3 for MS and MC Series parts and in column 4 for MR Series parts.
   Note: All parts listed are of maximum depth. With your exact specification, Micrite will machine trim them to the desired depth.
3. Finally, at the end of the part number obtained thus far, specify the type of material from which the part is to be manufactured by adding a material code as follows:

   ST — Cold Rolled Steel
   AL — Aluminum
   BR — Brass
   MU — Mu-Metal

   The thickness at which a part may be made from each of these materials may be determined by consulting the Material Code chart at the top of each page.

Note: Most parts listed in this catalog also may be manufactured from Nickel Silver, Cupro Nickel, Copper and Stainless Steel. However, actual use is dependent upon the part requested. For additional information please contact Micrite directly or your nearest Micrite Representative.

4. When you have completed a Micrite Part Number, the number should appear as follows:

MC-075-1000 ST	Micrite Circular—.750" dia. x 1.000" depth of Cold Rolled Steel
MS-162-1750 BR	Micrite Square—1.625" sq. x 1.750" depth of Brass
MR-210-243-0875 AL	Micrite Rectangular—2.109" wide x 2.438" long x .875" depth of Aluminum

ORDERING MATING COVERS

To order a mating cover for use with any enclosure listed in this catalog use the following procedure:

1. Specify the Series Number of the corresponding part (from column 1 in the listing).
2. To the Series Number add the code **IS** (for Inside Cover) or **OS** (for Outside Cover) as required.

CUSTOM MODIFICATIONS & SERVICES

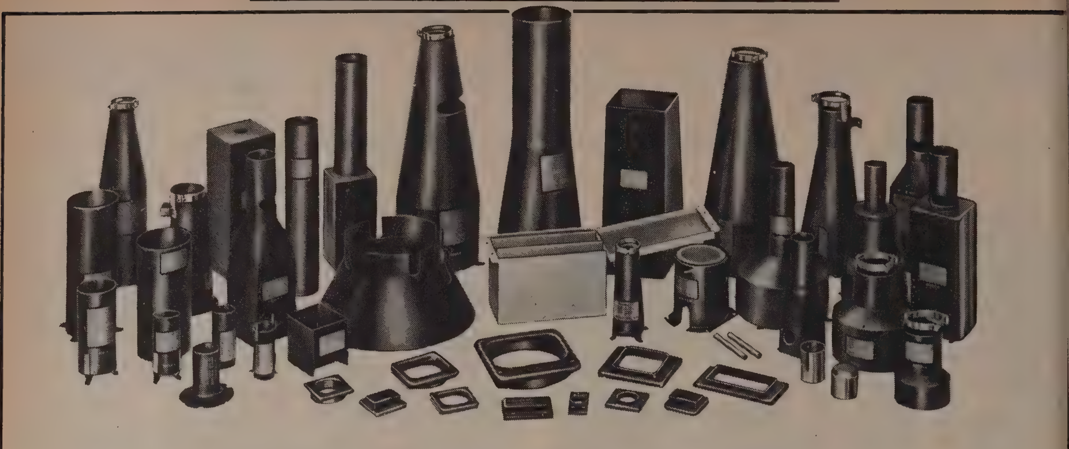
In addition to its line of standard configurations, Micrite also offers its customers the capability for providing certain custom services and modifications to standard parts. Among those services and modifications available are the following:

Holes . . . all forms of pierced holes, including potting, extruded, evacuation, keyhole, diamond, square, oval, rectangular and plain hole.

Sealing Discs
Engraved Stamping
Tabs
Flanges
Brackets
Soft Soldering
Spotwelding (resistant welding)

Silver Soldering
Brazing
Terminals
Inserts
Ground Pins
Nuts, etc.

For further information and/or engineering assistance relating to your specific modification requirements, please contact your nearest Micrite Representative or the Main Plant.



Standard Shields for FAIRCHILD/DUMONT, RCA, AMPEREX AND PHILIPS TUBES Available From Stock

MAGNETIC SHIELDS FOR MULTIPLIER PHOTOTUBES

The James Millen Manufacturing Company of Malden, Mass., with over 35 years of experience, presents magnetic shields designed to meet today's requirements covering storage tubes, multiplier tubes, and cathode ray tubes as well as many special applications requiring magnetic shielding. The shields that are listed below we try to keep in stock. More than 50% of our shield production is either modified or completely special. These shields are manufactured of high permeability material having a permeability of 80,000 or higher with a field of 40 gauss in the shield. We therefore can list a guaranteed field reduction on all of our shields.

TUBE TYPES				Millen Shield	Face Diameter Inside Inches	Neck Inside Diameter Inches	Length Inches	Tube Base Clamp	Side Opening Inches	Minimum D.C. Field Reduction in Gun Area

Miniature and Standard Size

The No. 39000 series of standard size and No. M000 series of miniature Millen "Designed for Application" flexible coupling units include, in addition to improved versions of the conventional types, also such exclusive original designs as the No. 39006 "slide-action" coupling (in ceramic and phenolic insulation or non-insulated for high torque).

The No. 39016 incorporates features which have long been desired in a flexible coupling *NO* Back Lash — Higher Flexibility — High Breakdown Voltage — Smaller Diameter — etc. The couplings illustrated and tabulated here are standard production type units. Dimensioned drawings of each are contained in the Millen "Industrial Electronics Master Data Book".

The couplings described here are indicative of the types manufactured by the James Millen Mfg. Co., Inc. Many customers require special revisions of the standard designs or entirely special couplings. Hubs to fit 3/32", 1/8", 3/16", 1/4", and 3/8" shafts are available for most couplings where the design permits the use of special hubs. The James Millen Mfg. Co., Inc. often supplies special couplings to customer specifications and is pleased to quote on the design and manufacture of special couplings or revisions of standard couplings.

MILLEN NO. 10031 COUNTER DIAL

The **No. 10031 Dial** is a rugged turns counting dial. It has a 0-99 turn digital readout plus a vernier scale calibrated 0-100. The design includes a built-in dial lock. The output coupling is a hub for 1/4" diameter shaft. The crank handle drives any multi-turn device directly. This new small size dial is designed to drive vacuum variable capacitors, rotary tunable inductors, multi-turn potentiometers, permeability tuned inductors and other multi-turn devices. Height: 4⅛". Width: 2⅞". Depth: 1 31/32" behind panel. Bezel and gear case are black molded glass-filled Noryl. Ratio: 1:1. Scales: Black with white numerals.

51000 HIGH VOLTAGE R-F SWITCH

51001: Single Wafer. 1 pole, 2 to 6 positions. 13 KV. D.C. flashover. 20 Amperes.

51001D: Single Wafer. 2 poles, 2 or 3 positions. 9 KV. D.C. flashover. 20 Amperes.

51002: Double Wafer. 2 poles, 2 to 6 positions. 13 KV. D.C. flashover. 20 Amperes.

51002D: Double Wafer. 4 poles, 2 or 3 positions. 9 KV. D.C. flashover. 20 Amperes.

CERAMIC PLATE OR GRID CAPS—Soldering lugs and contact one-piece. Lug ears annealed and solder dipped to facilitate "mechanical plus soldered" connection of cable.
No. 36001—5/16"______ No. 36002—3/8"______ No. 36004—1/4"______

SAFETY TERMINAL—Combination high voltage terminal and thru-bushing. Tapered contact pin fits firmly into conical socket providing large area, low resistance connection. Pin is swivel mounted in cap to prevent twisting of lead wire.
No. 37001, Black or Red______ No. 37501, Low loss______

STEATITE TERMINAL STRIPS—Terminal and lug are one piece. Lugs are turret type and are free floating so as not to strain L522 ceramic on wide temperature variations. Easy to mount with series of round holes. 1400 volt and 3500 volt series.

POSTS, PLATES, AND PLUGS—The No. 37200 series, including both insulated and non-insulated binding posts with associated plates and plugs, provide various combinations to meet most requirements. The posts have captive heads and keyed mounting. The No. 37291 on No. 37223 are standard in black or red with other colors on special order. No. 37201, No. 37202, and No. 37204 are available in black, red, or low loss. The No. 37202 is also available in steatite.

TUBE CLAMP
No. 33087
Spring steel, cad. plated

MILLEN TUBE SOCKETS DESIGNED FOR APPLICATION

Long Flashover path to chassis permits use with transmitting tubes, 866 rectifiers, etc. Long leakage path between contacts. Sockets may be mounted either with or without metal flange. Mounts in standard size chassis hole. All types have barrier between contacts and chassis. All but octal and crystal sockets also have barriers between individual contacts in addition.

Voltage regulator dual contact bayonet socket, 33991 black phenolic insulation and 33992 with low loss mica filled phenolic insulation.

No. Description	No. Description

MILLEN

DRIVES, SHAFT LOCKS AND BEARINGS

Stock Millen "Designed for Application" drives, shaft locks and bearings are illustrated and described on this page. Dimensioned drawings of each are contained in The Millen "Industrial Electronics Master Data Book". The parts described here are indicative of the types of drives, shaft locks and bearings manufactured by The James Millen Mfg. Co., Inc. Many customers require special revisions of the standard design or entirely special parts. The James Millen Mfg. Co., Inc. is pleased to quote on the design and manufacture of special parts.

Drives

RIGHT ANGLE DRIVES

No. A012 — Miniature right angle drive for ⅛″ shafts. Single hole mounting. One to one ratio. 15/32″ x ¾″ x ⅞″.

No. 10012 — Standard size right angle drive for ¼″ shafts. Provisions for many methods of mounting. 1:1

No. 10012-T — Thru-sleeve right angle drive. Stainless steel sleeve to take ¼″ diameter shaft. One to one.

WORM DRIVE UNITS

Cast aluminum frame may be panel or base mounted. Spring loaded split gears to minimize backlash. ¾″ x 2⅜″ x 3″.

No. 10000-A — 16:1 anti-backlash worm drive.

No. 10000-B — 48:1 anti-backlash worm drive.

No. 10000-C — 12:1 anti-backlash worm drive.

No. 10000-D — 36:1 anti-backlash worm drive.

GEAR DRIVE

No. 10000-12 — Spring loaded split gears to minimize backlash. 2 to 1 ratio spur gears. 1⅝″ x 1⅛″ x 1 3/16″.

FRICTION DRIVE

No. 10065 — Friction drive for .025″ to .032″ thick disc dials. Complete with 13/16″ diameter black phenolic knob.

Shaft Locks

No. A061 — Miniature shaft lock for ⅛″ diameter shaft. ¼—32 bushing. Nickel plated brass. Body 11/32″ hex.

No. A062 — Miniature shaft lock with knurled locking nut for thumb operation. For ⅛″ diameter shaft.

No. 10060 — Original standard size shaft lock for ¼″ diameter shaft. ⅜″-32 bushing with 7/16″ hex nut.

No. 10060-A — Shaft lock for ⅜″ diameter shaft. 9/16″-32 bushing with ⅝″ hex nut. Nickel plated brass.

No. 10061 — Standard size shaft lock for instant conversion of "plain" ¼″ diameter shaft to "locking type".

No. 10062 — Thumb screw shaft lock for ¼″ diameter shaft. ⅜″-32 bushing. Nickel plated brass.

No. 10062T — Standard shaft lock with molded phenolic thumb operated locking nut. ⅜″-32 bushing with 1″ nut.

No. 10063 — Lever operated shaft lock for ¼″ diameter shaft. ⅜″-32 bushing. Nickel plated brass.

No. 10064 — Shaft lock with dome locking nut. For ¼″ diameter shaft. ⅜″-32 bushing. Nickel plated brass.

No. 10064-C — Dome locking nut for use on slotted ⅜″-32 bushings. Nickel plated brass. Also black oxide finish.

BEARINGS

No. A066 — Miniature shaft bearing for ⅛″ diameter shaft. Nickel plated brass. Fits 17/64″ diameter hole.

No. 10066 — Standard size shaft bearing for ¼″ diameter shaft. Nickel plated brass. Fits ½″ diameter hole.

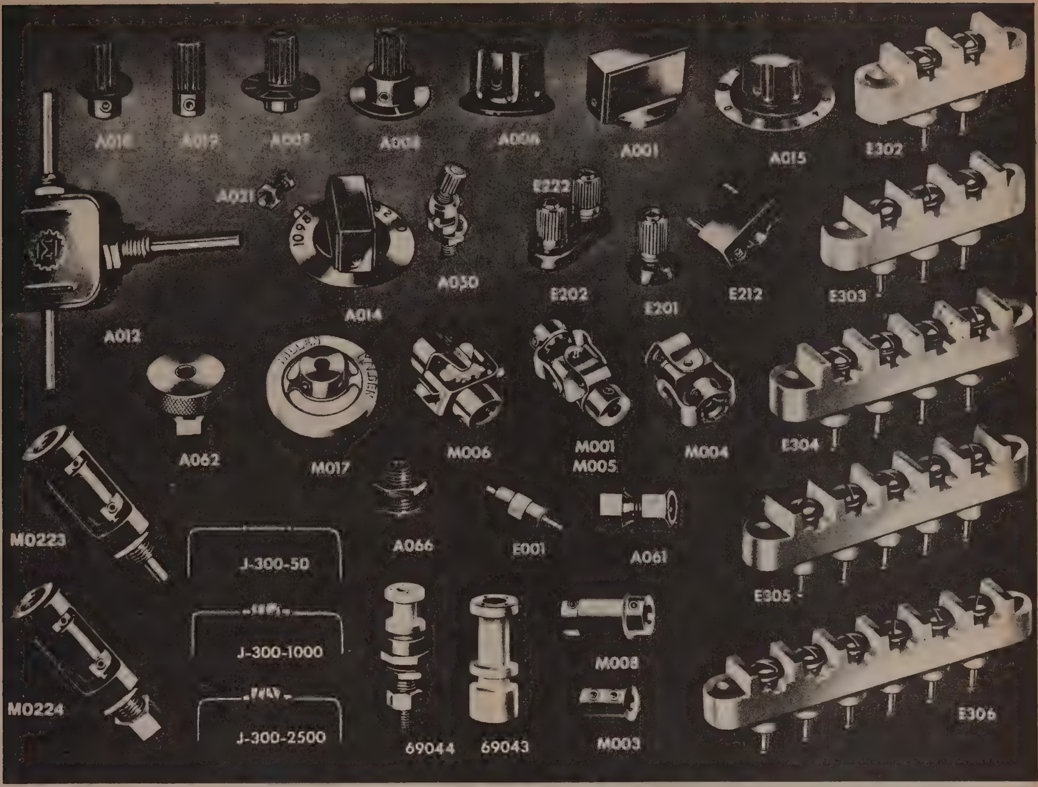
"Designed for Application"®



MILLEN *MINIATURIZED COMPONENTS*

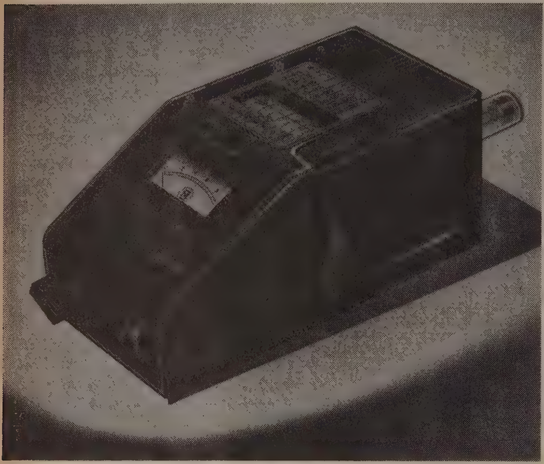
DESIGNED for APPLICATION miniaturized components developed for use in our own equipment such as the 90901 Oscilloscope, are available for separate sale. Many of these parts are similar, in most details except size, to their equivalents in our standard component parts group. In certain devices where complete miniaturization is not paramount, a combination of standard and miniature components may possibly be used to advantage. For convenience, we have also listed on this page the extremely small sized coil forms from our standard catalog.

Code	Description
A001	Bar knob for ⅛″ shaft. ½″ high by ¾″ long.
A006	Fluted black plastic knob with brass insert for ⅛″ shaft. ½″ high by ¾″ diameter.
A007	¼″ black plastic dial knob with brass insert for ⅛″ shaft. ⅝″ diameter dial. 9/16″ high.
A008	¼″ black plastic knob. Same as no. A007 except for style.
A012	Right angle drive for ⅛″ shafts. Single hole mounting.
A014	1″ bar dial for ⅛″ shaft. ½″ high. 180° or 280° dials for clockwise or counter-clockwise rotation.
A015	1″ fluted knob dial for ⅛″ shaft. ½″ high. Same dial plates as no. A014.
A017	1⅛″ diameter fluted black plastic knob for ⅛″ shaft.
A018	Knob, same as no. A007 except with 7/16″ diameter flange.
A019	Knob, same as no. A007, but without dial.
A021	Miniature metal index for miniature dials.
A050	Miniature dial lock.
A061	Shaft lock for ⅛″ diameter shaft. ¼″-32 bushing. Nickel plated brass.
A062	Shaft lock with knurled locking nut.
A066	Shaft bearing for ⅛″ diameter shafts. Nickel plated brass. Fits 17/64″ diameter hole.

Code	Description
E001	Steatite ceramic standoff or tie-point. Integral mounting eyelet. 0.205″ overall diameter.
E201	Black or red plastic binding post plates for No. E222.
E202	Black or red plastic plates for two binding posts spaced ½″.
E212	Black or red plastic plug for two binding posts spaced ½″.
E222	Metal binding post with jack top.
E302A to E306A	Steatite ceramic terminal strips. 5/16″ wide. Terminals spaced ⅜″ on centers. Screw type or solder type thru-terminals.
J300-3.3 to J300-2500	Complete line of miniature inductances 3.3 to 2500 microhenries. ⅜″ long. Diameter 0.115″ to 0.313″.
M001	Insulated universal joint style flexible coupling for ⅛″ dia. shafts.
M003	Solid coupling for ⅛″ dia. shafts. Nickel plated brass.
M004	Universal joint style flexible coupling for ⅛″ diameter shafts. Inverted hubs for short length. Not insulated.
M005	Universal joint style flexible coupling for ⅛″ diameter shafts. External hub. Not insulated.
M006	Universal joint style flexible coupling for ⅛″ diameter shafts. Spring finger. Steatite ceramic insulation.
M008	Plastic insulated coupling with nickel plated brass inserts for ⅛″ diameter shafts.
M017	Plastic insulated flexible coupling for ⅛″ diameter shafts. 17/32″ long by 15/16″ diameter. Bronze yoke.
M023	Insulated shaft extension for ¼″-32 bushing and ⅛″ shaft. For mounting sub-miniature potentiometer.
M024	Locking insulated shaft extension similar to no. M023.
69043	Steatite ceramic coil form. Adjustable core. Winding space ¼″ diameter by 13/32″ long. Mounting 4-40 hole.
69044	Steatite ceramic coil form. Adjustable core. Winding space 0.187″ dia. by 3/16″ long. No. 10-32 mounting.

"Designed for Performance"®

SOLID-STATE DIPPER



The Millen No. 90652 Solid-State Dipper is a dip oscillator with performance comparable to that of the best vacuum-tube grid dip meters available, but with the universal advantage of battery power which eliminates the power cord and provides a portability which is not restricted by the requirement for a-c power.

The No. 90652 Solid-State Dipper is supplied in a convenient polypropylene carrying case with a complete set of coils and a 9-volt alkaline battery to provide instant operation.

The operating features of the No. 90652 Solid-State Dipper include (1) a sensitive oscillator-dipper for checking resonant frequencies of non-energized resonant circuits, and (2) an absorption-type wavemeter with the oscillator circuit arranged to act as a Q-Multiplier Amplifier, providing both a sharp tuning response and great sensitivity. Frequency range: 1.7 to 300 MH/z.

Size of Dipper — 7¼"L x 3½"W x $3\frac{3}{16}$"H
Weight of Dipper — 2½ Pounds with battery
Size of Carrying Case With Dipper and Coils — 11⅜"L x 5⅛"W x 4"H
Shipping Weight — 7 Pounds

Tube GRID DIP METER

The Millen 90651-A Tube Grip Dip Meter is a calibrated stable RF oscillator unit with a transistorized electronic voltmeter to indicate the amplitude of the output. The frequency determining coil is plugged into the unit so that it may be used as a probe.

It features a transistor d.c. amplifier, and taut band meter.

The No. 90651-A is supplied complete in a convenient polypropylene carrying case which keeps the coil/probes with the Grid Dip Meter and protects both.

Five additional coils are available for extending the range to 165 KC.

The No. 90651-A has a transistor d.c. amplifier to increase sensitivity. It provides full scale meter reading at all frequencies from 1.7 to 300 mHz. It has a modern, taut band meter to eliminate any possibility of the meter ever becoming "sticky." These additions are made while still maintaining all of the features which have made the Millen No. 90651 Grip Dip Meter so thoroughly reliable it has become the standard of the industry. It uses the same stable oscillator without spurious dips, it has a transformer-type power supply, it has seven coils protected by form fitting molded covers, etc.

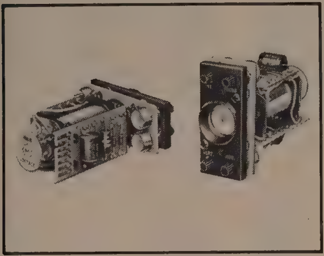
SCOPE MODULES TO BUILD INTO EQUIPMENT



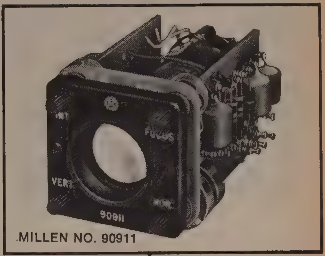
¾ Inch Round Tube/Flat Face

The Millen No. 90975 is an ultra-small, economical 'Scope with a flat face shielded 1DP1 C.R.T. that requires little power. Mounts on your panel and has a plug on rear for all input connections. Height: 2¾ inches overall. Depth: 3½ inches behind panel. Width: 1¼ inches overall. Weight: 5½ ounces, including tube. Uses Millen No. 90202 Module Plug-in High Voltage Power Supply. Sensitivity: Vert. 158, Hor. 184 v. per cm. defl.

MILLEN NO. 90901

One Inch Round Tube

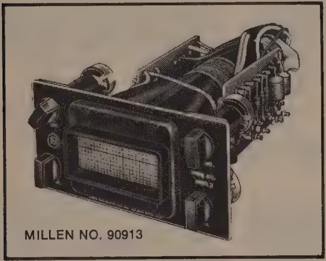
The Millen No. 90901 is the most economical of the module oscilloscopes. It uses a type 1CP31 one inch diameter cathode ray tube with fixed focus. Requires little power. Mounts on your panel. Height: 2¾ inches overall. Depth: 4⅝ inches behind panel. Width: 2⅞ inches overall. Weight: 10 ounces. Uses Millen No. 90202 Module Plug-in High Voltage Power Supply. Sensitivity: Vertical: 48, Horizontal: 71 v. p-p per cm. defl.



MILLEN NO. 90911

1¼ Inch Round Tube/Flat Face

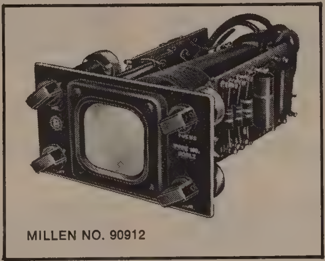
The Millen No. 90911 is a small module oscilloscope using the American-made type 1EP1 1¼ inch diameter cathode ray tube. The No. 90911 has balanced deflection, focus control and provisions for blanking or intensity modulation. Requires little power. Mounts on your panel. Height: 2⅝ inches overall. Depth: 4⅜ inches behind panel. Width: 3⅛ inches overall. Weight: 12 ounces. Uses No. 90202 Plug-in High Voltage Power Supply.



MILLEN NO. 90913

3 x 1½ Inch Rectangular Tube

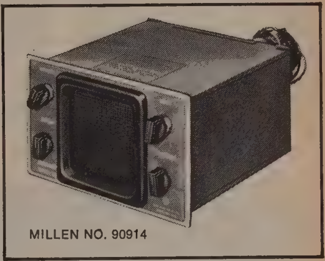
The Millen No. 90913 is a small module oscilloscope providing the larger rectangular display of a three inch tube, but requiring only the panel space used by a two inch tube. The No. 90913 has balanced deflection and has provisions for intensity modulation or blanking. Requires little power. Mounts on your panel. Height: 3 inches. Depth: 9½ inches behind panel. Width: 6 inches. Weight: 1½ pounds. Uses No. 90202 Power Supply.



MILLEN NO. 90912

Two Inch Round Tube

The Millen No. 90912 is a panel mounting module oscilloscope intended to be built into the customer's equipment. It is complete with bezel and panel, control of intensity, focus, vertical centering and horizontal centering. It requires only 3 x 5 inches of panel space but provides a 1¾ x 1⅝ inch display. Requires little power. Mounts on your panel. Height: 3 inches. Depth: 7¼ in. behind panel. Width: 5 in. Weight: 1¾ pounds.

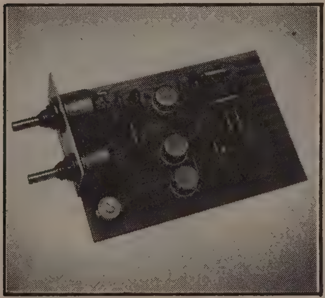


MILLEN NO. 90914

3½ Inch Square Tube

The Millen No. 90914 is a panel mounting module oscilloscope intended for monitoring applications. This oscilloscope indicator is complete with front panel, bezel and front panel controls consisting of Intensity, Focus, Vertical Centering and Horizontal Centering. The No. 90914 uses a 4KP-square face cathode ray tube. Requires little power. Mounts on your panel. Height: 3 13/16 in. Depth: 11¾ in. Width: 6⅝ in.

90928 Deflection Amplifier



MILLEN NO. 90928

Solid State   Direct Coupled

Frequency Response:
  DC to 500 kHz for 15 v. peak to peak output (—3 db). (Balanced).
  DC to 100 kHz for 250 v. peak to peak output (balanced).

Gain: Voltage: 650   Power: 55 db

Sensitivity: 23 millivolts input peak to peak produces 15 volts peak to peak swing.

Input Impedance: 100 kωcarbon potentiometer.

Output Impedance: 47 kωcollector load resistors.

Positioning: DC positioning control provided.
  At least ±150 volts plate-to-plate positioning voltage available.

Input: Single-ended.

Output: Push-pull balanced or single-ended (unbalanced).

Power Requirements:
  +300 volts unreg. 7 ma.
  + 15 volts reg. 12.5 ma.
  — 15 volts reg. 5 ma.

Dimensions:
  With control potentiometers mounted on bracket 2″w x 3 11/16″ lg. x 15/16″ deep.
  With potentiometers removed (for remote mounting) 2″ x 3″ x 5/8″.
  12 contacts, 0.156 centers, to fit circuit board receptacle (Such as Cinch 50-12A-20).

Weight: 1.7 oz.

MILLEN NO. 90202

Module Power Supplies

The Millen No. 90202 Plug-in High Voltage Module for use with the Millen Module Oscilloscopes supplies both high voltage and heater power. Input: 105-125 volts, 60 Hz. Output: 750 volts d.c. at 3 ma. to 1140 volts d.c. at 1 ma. and 6.3 volts a.c. at 0.6 ampere, Physical Data: 1⅞″ x 2⅛″ x 4⅝″. The Millan No. 90202-C is similar to No. 90202 except recommended for continuous duty and for 50 Hz. applications.

150 EXCHANGE ST., MALDEN, MASS. 02148, U.S.A.
TEL. (617) 324-4108

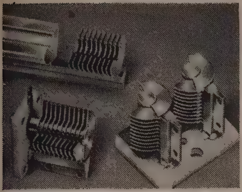
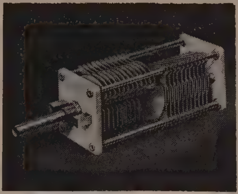
MILLEN CAPACITORS—STANDARD AND "SPECIAL" ORDER TYPES

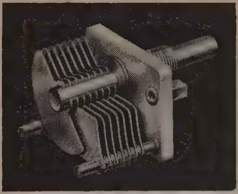


No. 25000 miniature, precision, high Q variable air dielectric capacitors with high reliability are machined from solid bars of extruded brass. Knob or screwdriver adjust from the front. Single hole mount, mount with two screws, or with tabs. 0.010" air gap. 350V. 21 plate **25035** is 4.0 to 35.8pf. 0.750" x 0.562" x 23/32"L.



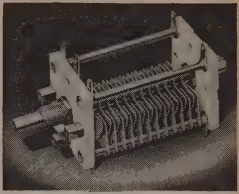
No. 28000 Straight line capacity or **No. 29000** straight line frequency. Double ceramic end plates 1 9/16" x 1 11/16". Double bearing. Single or double section. Balanced or inline rotor. Air gap 0.022"-850V. peak, 0.040"-1350V. peak, 0.066"-2250V. peak.

28227MKW 16-227pf. 1350V. 4 1/16"L.
29025KM 3.9-23.3pf. 850V. 1 9/16"L.



No. 22000 Ceramic end plate 1 1/16" x 1 7/16". Single bearing or double bearing. Air gap 0.020"-800V. peak or 0.060"-2000V. peak.

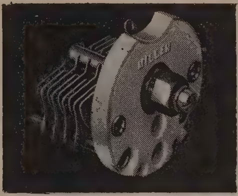
22006 2.8-7.5 pf. 800V. 1⅛"L.
22200MK 11-207pf. 800V. 2 9/16"L.
22910 4.1-12.5pf. 2000V. 1¼"L.
22950MK 8.5-57.0pf. 2000V. 3"L.



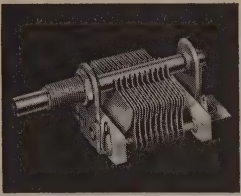
No. 23000 Ceramic end plate 1 7/16" x 1½". Single bearing or double bearing. Single or dual section. Balanced or inline rotor. Air gap: 0.020"-800V. peak or 0.060"-2000V. peak.

23907MKY 3.5-7pf. 2000V. 1 9/16"L.
23140MK 10-146.5pf. 800V. 2⅛"L.

No. 21000 series is a smaller version of the popular Millen 23000 series variable air capacitors. Single and dual sections are precision-built for smooth rotation. All plates (rotor and stator) are soldered to supporting members to insure permanent bonding and elimination of microphonics. Non-chatter brass bearings; brass plates are plated.

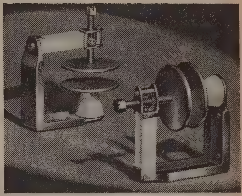


No. 17000 series is a single section tuning capacitor with a ceramic front plate. Soldered brass plates are cadmium plated, and uniformly spaced. Straight line capacity. Air gap 0.022" 850V. peak. Wide air gap capacitors may be supplied. Specify type number followed by the designation of W or Y. Gap: W—1350V. peak, Y—2250V. peak.



No. 19000 Ceramic insulators. Cross-section 1 9/16" x 1 11/16". Double bearing. Air gap 0.022"-850V. peak, 0.040"-1350 V. peak or 0.066"-2250V. peak. Single section. Tapped mounting brackets.

19335 14.7-339pf. 850V. 2⅜"L.
19950 11.6-60pf. 2250V. 2¼"L.

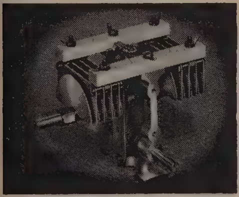


No. 15000 NEUTRALIZING CAPACITORS. Parallel discs or concentric cylinders.

15011 Disc. 3.5pf. at 0.4" gap to 18pf. at 0.04" gap.

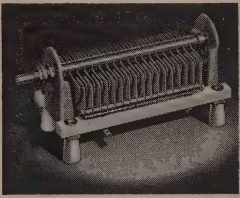
15005 Cylindrical Capacitor—3.5pf. to 16.2pf—4000V. peak.

15006 Cylindrical Capacitor—3.2pf. to 9.7pf—6000V. peak.



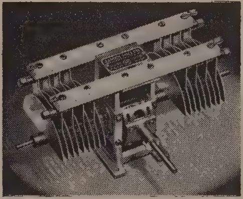
No. 11000 TRANSMITTING CAPACITORS. 16/1 or 48/1 ratio center gear drive. Ceramic insulation. Air gap 0.077"-3000V. peak or 0.176"—6000 V. peak. Aluminum plates 0.040" thick. Dual section.

11035 5.3-34pf. 3000V. 5 7/16"L.
11090 10-93pf 3000V. 7⅜"L.

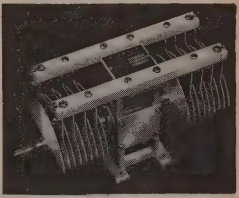


No. 12000 TRANSMITTING CAPACITORS. Rigid, heavy channeled aluminum end plates. Ceramic insulation. Single or dual section. Air gap 0.077"—3000V. peak or 0.176"—6000 V. peak. Aluminum plates 0.040" tick.

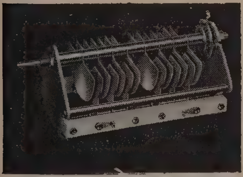
12935 9.7-28pf. 6000V. 4"L.
12515 16-150pf. 3000V. 5¼"L.



No. 04000 BALANCED TRANSMITTING CAPACITORS. 1/1 right angle center gear drive. Adjustable drive angle for sloping panel. Sturdy cast aluminum frame. Ceramic insulation. Air gap 0.077"—3000V. peak, 0.171" —6000V. peak or 0.265"—9000V. peak. Polished plates.



No. 14000 series transmitting capacitors have center-fed rotors for better high frequency current distribution, and ceramic insulation. "Designed for Application" terminals are in convenient places. End drive or right angle drive. Heavy gauge aluminum plates. Heavy cast aluminum mounting frame is employed. Rotor plate diameter is 3½".



No. 16000 TRANSMITTING CAPACITORS. Ceramic insulation. Air gap 0.077"—3000V. peak, 0.171"—6000V. peak or 0.265"—9000V. peak. Polished aluminum plates 0.050" thick. Single or dual section.

16550 13-52pf. 6000V. 3⅜"L.
16559 11-65pf. 9000V. 6¼"L.
16530 45-297pf. 6000V. 12½"L.
16512 40-128pf. 9000V. 11½"L.

Special Capacitors "Designed For Application"

At James Millen Mfg. Co., Inc. "special" capacitor designs and developments are the commonplace. Orders for unusual "special" capacitors are a specialty with us where we have the vast amount of standard parts and pieces of capacitor hardware to accomplish an infinite variety of specialized capacitors from the basic unit up to a completely new design. Whether it is a "special" capacitor to fit into a one inch cube or a capacitor a foot long, or custom units with low voltages required in solid state circuits to 9000 volt applications, James Millen Manufacturing Co., Inc. can design and produce it. Regardless of the size, voltage, or capacity, and whether it is an inline drive, right angle drive, gear box driven, or motor driven our facilities can manufacture a special capacitor to meet your specifications. Balanced low-torque constructions are also available to meet all the needs of the Armed Services and highly specialized research programs.

Since James Millen Manufacturing Co., Inc. manufactures and designs a wide range of shaft hardware (knobs, drives, couplings, locks, and gears) we can incorporate these into "special" capacitor designs to meet practically any equipment need, as well as its commercial or MIL specifications. The capacitor experience of James Millen Manufacturing Co., Inc. is based upon years of custom manufacturing for companies such as RCA, Foxboro Company and others. This experience plus the available tooling will give you an unusual advantage in obtaining "special" capacitors with speedy delivery, exacting quality and custom design at a sensible price.

SGL ELECTRONICS

MAGNETIC COMPONENTS

MAGNETIC LAMINATIONS

Available without tooling charge in a wide variety of EI, EE, F, DU, IU, L shapes in 6 and 14 mil. thickness, non-oriented and oriented, 80% and 50% nickel alloys. Also available in 4, 6, and selected 14 mil. grain oriented silicon steel alloys.

Special shapes are tooled in SGL's own Die Shop with either steel dies for economical short runs, or in carbide for maximum die life. Typical specialties are stamped rings, spacers, shields, in thickness down to 2 mil. with thickness tolerances as close as 50 micro-inches.

TAPE WOUND AND RING CORES

Promptly produced in gapless toroidal form — in sizes from less than ⅜″ O.D. and ⅛″ tape width, weighing from a gram to thousands of grams.

A wide selection of available alloys cover applications from tiny pulse and sensing transformers to massive cores for mag-amp controlled power supplies and inverters.

Aluminum cased cores, "EE" coated, have been used successfully in magnetic amplifiers at temperatures as high as 200°C. and have survived the shock of missile launching and in flight centrifugal and centripetal forces as high as 200 G.

SPECIFICATIONS

1. Custom annealing facilities in dry hydrogen and other atmospheres.
2. Custom stamping of flat metal parts on high speed presses.
3. High permeability foil material for magnetic shielding.
4. Permendur — For applications requiring higher saturation levels than either "O" or "S" alloys with other loop characteristics similar to "O" alloy.
5. Complete magnetic component testing, matching, grading facilities per IEEE Standard No. 106 and ASTM A346-64 (reapproved 1970).

"C" CORES

A wide range of 4 mil. "C" cores from the smallest requirements up to approximately 4½″ in overall length are available. SGL "C" cores are produced by new manufacturing techniques with special emphasis on maintaining precise dimensional and electrical uniformity, to assure easier assembly and lower power losses.

TRANSPARENT PLASTIC MATERIALS

- **NON-GLARE CRT SCREENS**
- **LED FILTERS**
- **OPTICAL WEDGES**
- **INSTRUMENT WINDOWS**
- **FRONT PANEL DISPLAYS**

SGL Homalite manufactures high performance, optically clear and colored thermosetting plastic materials to customer specifications.

Four basic grades are available with or without the non-glare surface in assorted standard sheet sizes, or can be in-house fabricated to meet your exacting requirements.

These grades provide a combination of unique features not found in ordinary transparent plastic:

ABRASION RESISTANCE:

H-911 has the best abrasion resistance. When measured by the modified Tabor Method, H-911 exceeds Acrylic 30 to 40 times. Resistance to scratching by high-speed particles is especially good.

CHEMICAL RESISTANCE:

H-911 and H-100 are immune to the effects of virtually all solvents, including acetone and benzene, and to most chemicals other than highly oxidizing acids. H-911 and H-100 resist checking and crazing when exposed to nitric or HF fumes.

HEAT RESISTANCE:

H-101 meets UL requirements as a self-extinguishing material, and can operate in environments when the temperature is at 250°F. continuous.

RESISTANCE TO PITTING:

H-911, H-100 and H-101 have more resistance to pitting by small, hot particles than glass and most other plastics, and is many times more resistant to welding sparks and hot molten spatter.

ANTI-STATIC:

H-141, is permanently anti-static throughout the material. Slightly softer than acrylic.

Call or write us today. Our unique materials can add a new dimension to your requirements.

.006	—	15
.010	—	4
.010	—	15

NOTES:

Standard foil shipped same day as ordered.

Adhesive backed foil shipped within 1 week of order.

Both Co-Netic AA and Netic foils can be slit to any desired width (including adhesive backed stock). Allow 1-2 weeks for delivery.

All foil is Perfection annealed for maximum attenuation characteristics.

Bensenville, Illinois 60106
(312) 766-7800 TWX (910) 256-4815

Co-Netic shields are not significantly affected by shock or vibration. They have minimal retentivity and do not require periodic re-annealing. When grounded, they effectively shield from electrostatic as well as magnetic fields over a wide range of intensity.

Shields can be custom engineered to your specifications and desired quantities.

Co-Netic shields improve the overall amplification characteristics of photomultiplier tubes by significantly reducing magnetic interference, especially in the low electron velocity region between the photocathode and first dynode.

NOTES:

Unless otherwise noted:

Dimensions — All ID

Material — .040″ Thick Co-Netic AA

Finish — Black baked enamel; texture outside, flat inside.

- **a** — Upper end closed.
- **b** — Dimensions D & E are measured from the outside of the outer shell. Dimension G is the maximum OD. Material — Three layers, separable; outer .049 Netic S3-6, two inner .031 Co-Netic AA Finish — Netic S3-6, black oxide; Co-Netic AA, none.
- **c** — Has three tabs, spaced 120° apart, to grip the metal collar of the PM tube.
- **d** — Material — .031″ Co-Netic AA.

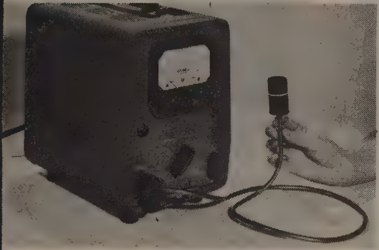
complete shielding accessories & mica

MAGNETIC SHIELD DIVISION

Perfection Mica Company
740 Thomas Drive
Bensenville, Illinois 60106
(312) 766-7800 TWX (910) 256-4815

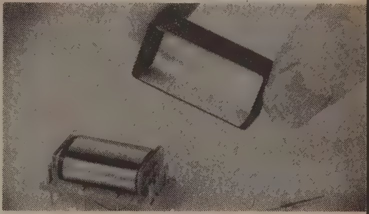


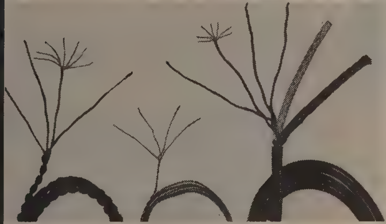
LAB KITS & PROBES

Perfection Mica's recently introduced e.m.i. shielding lab kit contains Netic and Co-Netic shielding material, double-side adhesive tape for shield construction and an LK-101 A.C. magnetic pick-up probe (output 20 millivolts/gauss @ 60Hz) . . . all for only $99.50. Higher sensitivity probes of 60 millivolts/gauss are available on individual order.

COMPONENT SHIELDS

Perfection Mica stocks many standard shield enclosures for relays, reed switches, transformers, CRT's, small motor assemblies, etc. High attenuation shields can also be quickly fabricated for special component or sub-assembly configurations. Call Perfection Mica for a fast estimate on any of your shielding needs.



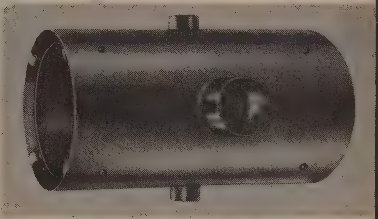


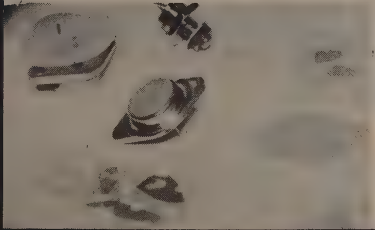
INTER-8 WEAVE CABLE

The special twisted configuration of individual wire leads within Inter-8 Weave Cable provides lower pick-up or radiation between interconnections. Typical performance improvement is −20 db for radiation and −12 db for pick-up. Plain or Co-Netic shielded cables are available in wire size 24 AWG in lengths up to 500 feet.

ZERO GAUSS CHAMBERS

Zero gauss chambers provide the ultimate in magnetic shielding. Perfection Mica's general-purpose zero gauss chamber (ZG-102), offers a significant reduction in both static and time varying fields normally found in laboratory and research environments. A Helmholtz coil system can be incorporated so that known fields can be generated for calibration purposes. Three concentrically spaced Co-Netic chambers with closed ends and two removable covers with openings for cable egress are provided.





MICA INSULATORS

All types of mica available. Supplied in clear, natural, and built-up sheet stock in thicknesses ranging from .001″ to .062″. Save tooling expense on many varieties of fabricated parts including semi-conductor insulators in .001″ to .003″ thickness with .002″ hole tolerances. Excellent heat dissipation and high dielectric strength improves breakdown protection and efficiency of semi-conductors.

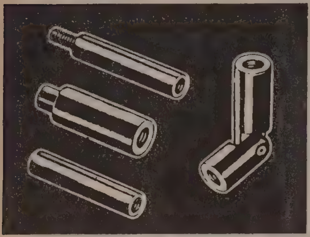
Manufacturer of Standard Hardware for the Electric and Electronic Industries

Largest Stock of "OFF THE SHELF" Items Available Anywhere



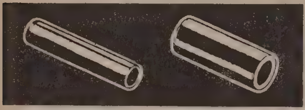
STANDOFFS

POST TYPE: Brass, Aluminum, Stainless Steel, Nylon, Phenolic, Tenite. 1/8 through 5/8 round, hex, square. Lengths: 1/8 through 10". Various thread sizes.

SWAGE TYPE: Brass, Aluminum, Stainless Steel. 1/8 through 3/8 round or hex. Lengths: 1/8 through 2". Various shank diameters and threads

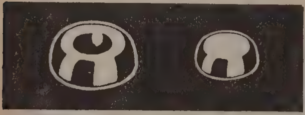
MALE–FEMALE: Brass, Aluminum, Stainless Steel, Nylon. 3/16 through 3/8 round or hex. Lengths: 1/4 through 6". Various thread sizes.

HINGED: Brass, Aluminum, Stainless Steel. 3/16 through 3/8 round. Lengths: 3/4 through 2". Internal threads, external threads, swage type. Available with legs of equal length from hinge point or with unequal leg lengths.



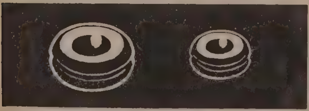
SPACERS

Brass, Aluminum, Stainless Steel, Nylon, Phenolic, Tenite. 1/8 through 1/2 OD; various ID. Lengths: up to 2" depending on diameters.



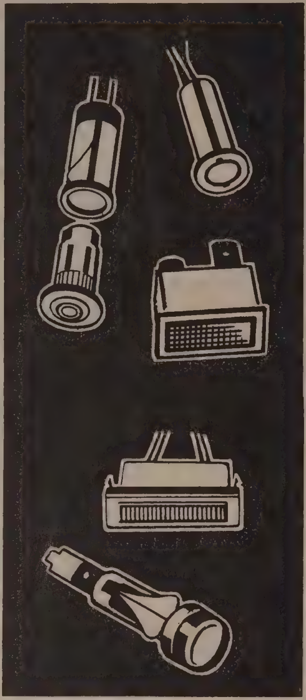
BUMPERS

Available types: machine screw, wood screw, knurled drive, recess and adhesive backed.



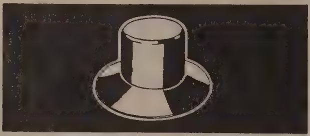
GROMMETS

Available in AN-MS and standard commercial line. 11/32 through 1-5/8 OD, 1/8 through 7/8 ID.



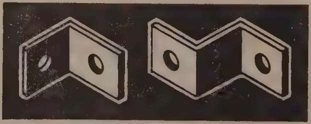
PANEL LIGHTS

Neon, fluorescent, incandescent from 6 to 380 volts. 10 colors in various shapes, sizes and terminations. Series available with interchangeable lamps.



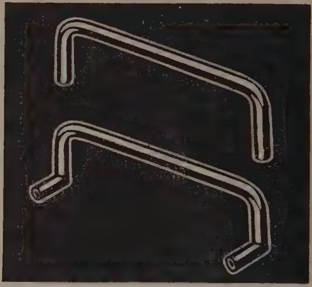
KNOBS

Machined aluminum—round, round skirted, pointer and push to turn. Variety of finishes.



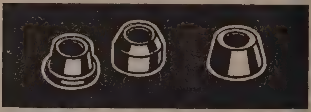
BRACKETS

"L" and "Z" brackets available with various combinations of holes—tapped or untapped.



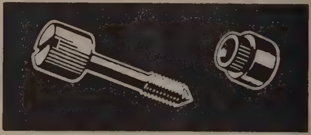
HANDLES

29 different styles available from standard round bow handles to 2 and 3 position folding handles. Rectangular, oval, extruded, tape insert, slanted, zinc die cast, circuit board, offset etc. External or internal threads. 1/8 through 3/8 round, 7/16 x 9/32 through 5/8 x 3/8 oval. Many combinations of heights and centers. Numerous finishes available.



FERRULES

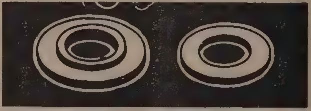
5 different styles available for 1/8 to 1/2 diameter handles in brass, aluminum and stainless steel.



CAPTIVE PANEL HARDWARE

SCREWS: Brass and Stainless Steel. 7 types available with head diameters 1/8 through 3/4. Lengths: 1/4 through 2". Threads: 4-40 through 5/16-18.

RETAINERS: Brass and Stainless Steel. 7 types available, diameters 1/4 through 7/8. Threads: 4-40 through 5/16-18.



INSULATING WASHERS

Fibre, Nylon, Phenolic, Teflon, Tenite etc.

Flat washers: .125 to 1.250 OD, .055-.563 ID, .016 to .135 thickness.

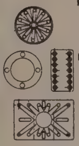
Shoulder washers: .140 to 1.500 OD, .046 to .765 ID, .019 to .187 overall thickness. Various shoulder thicknesses.

Full Line Catalog Available on Request

PACKAGING PROGRESS BY **Bivar**

circuit & packaging problem solvers.

PERMANENT COMPONENT SPACERS

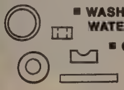


- PROTECT, INSULATE, SUPPORT COMPONENTS
- DURABLE NYLON PER MIL-M-20693
- HUNDREDS OF STANDARD STYLES
- LOW COST, IN-DEPTH STOCK

Reduce labor costs and repairs; ideal for transistors, capacitors, DIP packages.

WASH-AWAY COMPONENT SPACERS

DISS-O-PADS® provide accurate, uniform component spacing above PCB surface. Substantially reduces rejects and rework.



- WASH AWAY IN WARM OR HOT RUNNING WATER WITHOUT RESIDUE
- OVER 400 STANDARD STYLES
- IN-DEPTH STOCK; IMMEDIATE SHIPMENT

SNAP-IN CARD GUIDES

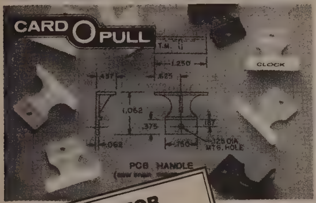
- 24 STANDARD LENGTHS FROM STOCK
- REINFORCED NYLON MOLDED
- SNAP-IN CONVENIENCE; MAXIMUM RETENTION

Snap-in convenience into card cages, sheet metal; unlimited spacing options to meet exacting needs.

PCB CARD EJECTORS

Safe, easy lever action for extraction and insertion of 1/16" and 3/32" PCB's.

- 6 STANDARD STYLES, 2 LOCKING VERSIONS
- MOLDED NYLON PER MIL-M-20693
- 12 COLORS, MARKING AVAILABLE
- STOCKED IN DEPTH



PCB CARD HANDLES

- LARGE, EASY PULL STYLE REQUIRES MINIMUM BOARD SPACE
- COLORS, MARKING AVAILABLE
- IN-DEPTH STOCK

PCB's can be easily removed or inserted and identified. Low cost, easy installation.

Hundreds of applications have provided a complete selection of standard BIVAR Component Spacers, Card Guides and PCB Card Ejectors to assist design, manufacturing and packaging engineers to improve efficiency and product appeal.

Reduced rework and rejections are assured with use of these Permanent or Temporary Spacers; and printed circuit boards are easily packaged and handled with BIVAR's Econ-O-Gide™ Snap-In Card Guides and CARD-O-PULL™ Ejectors and Handles. Although several standard models will answer most applications, special requirements are invited.

- **IMPROVE PRODUCT AND PACKAGING EFFICIENCY, APPEAL**
- **OVER 600 STANDARD ITEMS TO CHOOSE FROM**
- **REDUCED REWORK, REJECTIONS: FASTER ASSEMBLY**
- **LOW-COST AND IN-DEPTH STOCK FOR IMMEDIATE SHIPMENT: DISTRIBUTOR AVAILABILITY**

engineering/buyer's design and product catalogs free on request.

A complete, 24 page designer's catalog listing sizes, styles and pricing is available on request. Send for latest product/design bulletins and technical information on all BIVAR Packaging Products. Complete data will be sent immediately.

Waldom/Bivar
DISSOPADS™

- IMPROVE RELIABILITY
- REDUCE PRODUCTION COSTS
- NYLON PER MIL-M-20693

HARDWARE (NON-CURRENT CARRYING)

PERMANENT

PERM O PAD®

FOR . . . PROTECTING, LOCATING, FIXTURING, SPACING, MOUNTING & REINFORCING . . . TRANSISTORS, INTEGRATED CIRCUITS & OTHER PRINTED CIRCUIT COMPONENTS.

PERMANENT MOUNTING SPACERS give protective support, shock mounting, added insulation, greater heat dissipation, cleanliness and improve neatness. PERM-O-PADs are molded from Nylon per MIL-M-20693 and are available from stock in a multitude of configurations. There are many unique designs to choose from in these economical mounts.

WASH-AWAY

DISS O PAD®

- EVEN, ACCURATE POSITIONING
- REDUCE REJECTS & REWORK
- REDUCE LABOR COSTS
- STANDARD SHAPES TO FIT ALMOST ANY COMPONENT

SIMPLE AND EASY TO USE . . . WASH AWAY IN WARM OR HOT RUNNING WATER . . . NO RESIDUE.

WASH AWAY SPACERS provide accurate, uniform component spacing above PCB surfaces, protect components throughout the soldering cycle, then **WASH AWAY** completely in **WARM** or **HOT RUNNING WATER,** without a trace of residue. Over 400 sizes are available from stock. Low cost, versatile DISS-O-PADs substantially reduce rejects, inspection and rework costs.

There is more catalog data available to you at your fingertips than ever before...when you

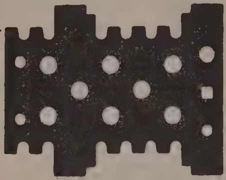
FOR EVERYTHING IN NATURAL & SYNTHETIC MICA

40 YEARS OF KNOW HOW.

Precision-punched parts and specialties made from natural and synthetic micas, plastics, and other insulating materials suggested for use as insulating components in the following partial list of products.

IndoMica Type MS



A new insulating product, which closely approximates the electrical, mechanical, chemical and thermal properties of Natural Mica.

IndoMica, Type MS, consists of natural high heat resistant mica platelets BONDED WITH BORON BASE SILICONE RESIN for high temperature applications. It is available in 10″ x 36″ sheets in thicknesses of 0.015″ to 0.060″ and in 20″ x 36″ sheets in thicknesses of 0.015″ to 0.032″ or precision punched to your specifications.

It offers: inorganic, odorless, smokeless insulation; high mechanical strength and durability; regular thickness and sheet sizes, easy to punch to specific requirements; high temperature resistance and stability; chemical inertness and resistance; excellent dielectric properties.

Recommended for use as a self-supporting carrier of heating coils in appliances and industrial apparatus, as mechanical and thermal washers and gaskets, as a substrate, or insulating board for mounting components and similar applications.

Outstanding properties include: Specific Gravity: 1.9. AIEE Thermal Classification: Class C. Maximum Continuous Use Temperature: 1200°F. Maximum Intermittent Use Temperature: 1400°F. Dielectric Strength per ASTM-D115: For .015″ Sheet 1012V/mil. Dielectric Strength per ASTM-D115. For .030″ Sheet 830V/mil. Surface Resistivity per ASTM-D257: 10^{15} megohm. Dielectric Constant per ASTM-D150: 2.95. Dissipation Factor per ASTM-D150: 0.33. Volume Resistivity per ASTM-D257: 10^{14} megohm-cm. Arc Resistance per ASTM-D495: 198 sec. Water Absorption, Weight Gain After 24 Hours Immersion: 0.91%. Coefficient of Linear Expansion: 9×10^{6} per °C. Tensile Strength: 30,000 psi. Compressive Strength: 36,000 psi. Flexural Modulus: 15×10^{6} psi.

IndoMica 21

Just as IndoMica Type MS, this new series 21 consists of natural high heat resistant mica platelets bonded with boron base silicone resin.

IndoMica series 21 is available in sheet sizes of approximately 22″ x 40″ in standard thicknesses of .004, .006, .008, .010, .012, .014 inches in the following three types:

IndoMica 21 - Soft
This material is similar to IndoMica Type MS but with a softer surface. It is not recommended for continuous applications above 500°F.

IndoMica 21 - Regular
This material has same properties as IndoMica Type MS and its only difference are thinner thicknesses of the sheets.

IndoMica 21 - Hard
Material similar to IndoMica Type MS but with a substantially harder surface, higher mechanical strength and lower water absorption.

In addition to the standard thicknesses indicated above, IndoMica series 21 may be manufactured to other thicknesses on special orders.

IndoMica GR

This new version of IndoMica consists of mica paper reinforced by fibre glass. The extreme flexibility and mechanical strength of IndoMica series GR makes it an excellent material for application as a wrap around coil subject to high temperatures. This Class C material is presently available in sheet sizes of approximately 22″ x 38″ in two standard types:

IndoMica GR - 1
is fibre glass reinforced on one side only and has a total thickness of approximately 0.005″.

IndoMica GR - 2
is fibre glass reinforced on both sides and has a total thickness of approximately 0.006″.

Natural Mica

Unsurpassed for its insulating properties for electrical and electronic applications, mica components manufactured by our Industrial Mica Division have been a standard for forty years.

Vacuum tube and capacitor manufacturers are just a few of the many customers who have taken advantage of coated natural mica spacers to reduce manufacturing shrinkage due to delamination. In addition, coating mica offers superior degassing properties and better dielectric parameters.

Industrial Mica offers an improved corrugated natural mica which enables the user to form thick mica sheets into curved patterns. This unique material overcomes the rigid properties that are inherent in natural mica and minimizes breakage during fabrication.

FOR EVERYTHING IN

NATURAL & SYNTHETIC MICA TRANSISTOR MOUNTINGS

40 YEARS OF KNOW HOW.

Precision-punched parts and specialties made from natural and synthetic micas, plastics, and other insulating materials suggested for use as insulating components in the following partial list of products.

Possessing exceptional thermal and electrical properties, which afford highly effective protection against electrical losses, free from pressure-induced distortion, achieve rapid heat dissipation and are extremely lightweight. Outstanding chemical inertness and an absence of degassing characteristics make them particularly well suited for varied vaccum and spacer applications.

Major specifications include:

Specific heat — 0.207
Volume resistivity — 10^{15} chm/cm^3
Dielectric strength — 3000 volts/mil
Dielectric constant — 6
Maximum operating temperature — 1400°F

Mica Pads and Spacers are available in both standard and custom produced items. When ordered from stock, units can be supplied at prices as low as $5.00 per thousand.

Quality control is the keynote of our production facilities. We employ the use of the latest inspection equipment which includes 14″ and 30″ optical comparators, templates, electric taper pin gauges, electronic thickness gauges, etc. Our punch presses were built to punch precision parts. Dies, whether the blanking type, compound or pressure for flawless edges, are the best in the world.

We fabricate tons of precoated Mica (magnesium oxide and aluminum oxide coating). We hand cut, machine and punch, not only Mica, but Inorganic Micamat and Isomica as well as other insulation materials such as mylar and teflon.

We offer you decades of experience with a history of quality which allows us to look ahead for additional advancement for the mineral — Mica.

HUMISEAL COATINGS

GENERAL CHART

Listed in this General Chart of Properties are ten of the most frequently used HumiSeal Protective Coatings and their principal properties. These have been tabulated in order to facilitate comparison of their characteristics and selection of the most suitable type for a specific application. In addition to these HumiSeal types we manufacture a variety of coatings for special purposes, including high temperature applications. Should none of the coatings listed in this chart fulfill your requirements, we suggest that you contact us for recommendations.

	PROPERTIES OF LIQUID HumiSeal										THERMAL PROPERTIES		
HumiSeal Type[1]	Specific Weight (lbs. per gallon)[2]	Solids Content (% by weight)[3]	Viscosity, with catalyst when applicable (centipoises)[4]	Flash Point (°F)[5]	Drying Time for Handling[6]	Recommended Curing Conditions	Time Required to Reach Optimum Properties	Pot Life, at Room Temperature	Shelf Life, at Room Temperature	Coverage per gallon (in sq. ft.) After One Dip	Continuous Use Temperature Range (°F)	Thermal Shock Test[7]	Solderability[8]

HumiSeal TYPES LISTED IN BOLD PRINT COMPLY WITH THE REQUIREMENTS OF MIL-I-46058C

All technical data in this bulletin are based on test results using the stated standards and are believed to be correct. However, since the end use of HumiSeal materials (and the manner of storing and handling them) is beyond our control, we make no warranty — expressed or implied — as to the fitness of use, results to be obtained from or effects of use with respect to these materials. Their use shall be solely by the judgment of and at the risk of the end-user notwithstanding any statement contained in this bulletin.

1. The first digit in the type number specifies whether the product is a one-, or a two-component system.
2. Fed-Std 141a, Method 4184.
3. Fed-Std 141a, Method 4044.
4. Fed.Std 141a, Method 4287.
5. Fed-Std 141a, Method 4291.
6. Fed-Std 141a, Method 4061.
7. Mil-I-46058C.
8. Visual evaluation for ease of soldering with an 85 watt iron through a 2 mil film.
9. Fluorescent dye may be added if required.
10. Fed-Std 141a, Method 2121.
11. Fed-Std 406, Method 7031, Procedure A.
12. Fed-Std 141a, Method 6303.
13. ASTM-D150-65T, at 1 MHz and 25°C.
14. Mil-I-46058C Insulation resistance during 10th cycle, at 65°C and 98% RH.

FOR ELECTRONICS

OF PROPERTIES

HumiSeal Protective Coatings are available in one-quart or one-gallon cans, five-gallon pails, or fifty-five gallon drums. HumiSeal types 1B15 and 1A27 are also available in 16-ounce aerosol containers. All HumiSeal types listed in this chart may be applied by dip, brush or spray. Literature on recommended techniques for the proper application of coatings and preparation of the substrate is available upon request.

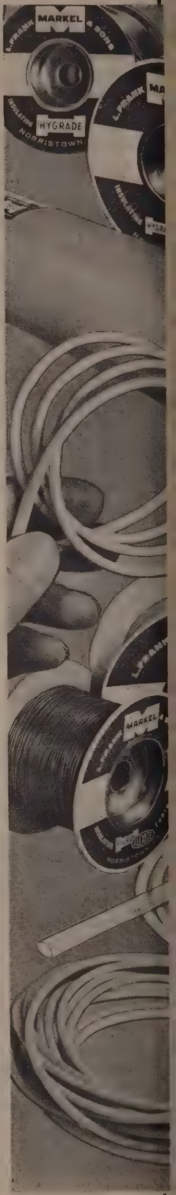
Insulating Tubings and Sleevings— High Temperature Wire and Cable



ELECTRICAL INSULATING SLEEVINGS

HYGRADE®

HYGRADE SR-398 Silicone Rubber Coated Fiberglass Sleeving is a Class H material made of closely-woven glass braid, coated with highly abrasion-resistant silicone rubber.

HYGRADE SV-862 Silicone Varnish Impregnated Fiberglass Sleeving is a flexible Class H insulation with unusual resistance to temperature extremes and weathering.

HYGRADE VF Flexible Fiberglass Sleeving is a tough, Class B insulation of plastic-covered fiberglass with excellent electrical resistance, flexibility, and heat stability. (UL FR-1)

HYGRADE Polytube 463 Class F Flexible Fiberglass Sleeving is an acrylic-coated material especially compatible with the wire enamels used in motors and transformers.

HYGRADE Thermoflex 1200 Class C Flexible Fiberglass Sleeving is made of 100% tightly braided fiberglass. For use at continuous temperatures as high as 1200°C. (UL FR-1)

HYGRADE Thermoflex 500 Class C Flexible Fiberglass Sleeving is made of tightly braided and pigmented fiberglass. For continuous operating temperatures to 500°C. (UL FR-1)

ELECTRICAL GRADE PLASTIC TUBINGS

FLEXITE®

FLEXITE TEFLON TFE Extruded Tubing offers unequaled quality, performance and scope in electrical insulation over the widest and most stable temperature range of any flexible insulation (below −70°C to +250°C). Its unique performance characteristics are superb electrical properties, unmatched chemical resistance, zero moisture absorption, non-corrosive to all metals, completely inert to fungi, and excellent anti-stick properties—having the lowest coefficient of friction of any solid material. With nearly infinite life under normal operating conditions, Teflon TFE is the ultimate space age insulating material.

FLEXITE TEFLON FEP Extruded Tubing is a fluorocarbon material that combines long-term reliability (matched only by TFE) with chemical inertness, flexibility, superb electrical characteristics and a useful continuous operating temperature range of −70°C to +200°C.

FLEXITE SR-200 Silicone Rubber Extruded Tubing is made of an extremely elastic compound, and is excellent for high voltage applications at Class H temperatures.

FLEXITE HT-105C Extruded Vinyl Tubing is UL recognized for continuous use at 105°C. It is a strong, very flexible tubing for many applications. (UL FR-1)

FLEXITE E Extruded Vinyl Tubing is an extremely flexible tubing designed primarily for low temperature applications (to −68°C), as in aeronautical instrumentation.

FLEXITE Shrinkdown HT105 is a flexible material made in expanded sizes to shrink 50% with 110°C heating; has outstanding electrical and mechanical properties. (UL FR-1)

FLEXITE Shrinkdown LM-145 is a very flexible modified polyolefin tubing that will shrink 50% with 120°C heating and conform closely to the object it covers. It is suitable for use at temperatures to 135°C; has excellent mechanical strength and abrasion resistance.

FLEXITE Shrinkdown PO-135 is a thermally-stable Class B (130°C) crosslinked material extruded from specially-formulated polymers. Supplied in expanded sizes, PO-135 may easily be assembled over components, connectors, cables, or other irregular shapes. When exposed to heat (150°C), it shrinks 50% in diameter, forming a tough, smooth insulating covering with excellent chemical, electrical and oil resistant properties.

FLEXITE Shrinkdown HM-140 is a heat shrinkable semi-rigid polyolefin tubing with exceptional mechanical strength and electrical properties. It has outstanding chemical resistance and may be operated continuously at temperatures from −55°C to +175°C. (UL FR-1)

FLEXITE Shrinkdown HA-150 is a heat shrinkable polyvinylidene fluoride tubing with an operating temperature range of −55°C to +175°C. It is a very tough material with high resistance to abrasion and cut through suitable for strain relief applications. (UL FR-1)

Ask for data sheets on these HYGRADE and FLEXITE products

Insulating Tubings and Sleevings— High Temperature Wire and Cable

MARKEL
SINCE 1922

FLEXITE Shrinkdown TE-250 is a heat shrinkable Class H tubing with the unique properties of Teflon, plus the ability to shrink at 330°C to make a form-fitting cover over shapes.

FLEXITE SPIRAL-CUT CABLE WRAP is an expandable plastic wrap for harnessing, insulating, and the abrasion protection of wires, tubing lines, cables, or bundles in diameters up to four inches. Quick and easy to apply, the cable wrap provides openings through which leads can be broken out at any point, yet creates a firm, homogeneous harness assembly which can be channeled, bent or flexed without danger of cut through. Manufactured in five different materials to meet a wide variety of requirements over a temperature range from −100°C to +250°C.

FLEXTECH® FLUID AND MECHANICAL GRADE PLASTIC TUBINGS

FLEXTECH AR-400 Abrasion-Resistant Tubing is extruded from a Markel patented composition of reinforced Teflon and exhibits abrasion resistance many times greater than conventional Teflon tubings. It also offers good antistick properties, chemical inertness, high and low temperature stability, and meets the electrical requirements of MIL-I-22129C. Ideal for an extremely wide range of mechanical and viscous fluid transfer uses.

FLEXTECH AR-420 Abrasion-Resistant Tubing is extruded from a Markel-formulated reinforced Teflon. With chemical properties similar to AR-400, cut-through and abrasion resistance second only to AR-400, AR-420 also offers excellent flexibility and meets the requirements of MIL-I-22129C. Ideal for fluidic controls and transfer of fluids in difficult environments.

FLEXTECH TEFLON FEP is a fluorocarbon tubing suitable for continuous 200°C use in applications requiring the chemical inertness, durability, and other desirable properties of TFE but without the extreme high temperature requirements. It has nearly zero moisture absorbency, good antistick properties and semi-transparency ideal for fluid transfer.

FLEXTECH FN NYLON Tubings (FN-1000, standard wall and FN-2000, heavy wall) are extruded from polyamides specially compounded to provide flexibility, heat stability and ultraviolet resistance. They have low moisture absorption (1.5%), excellent mechanical strength, and are superior in corrosion resistance, flexibility and fatigue life. Both FN types are self-extinguishing and are available in non-toxic formulations for food and beverage and other uses at operating temperatures from −70°C to +70°C.

FLEXTECH HP NYLON Tubings (HP-1000, 1600 psi and HP-2500, 2800 psi Burst Strength) are extruded from a polyamide designed specifically for the conveyance of air, gases and liquids under high pressures. They are odorless, tasteless, non-corrosive, fungus-resistant and self-extinguishing. HP tubings have exceptional mechanical strength, are non-toxic, easy to clean and highly recommended for food processing or other heavy duty applications. Temperature ratings for HP-1000: −44°C to +93°C; for HP-2500: −85°C to +105°C.

FLEXTECH LP-80 POLYETHYLENE is a specially compounded tubing designed for the conveyance of air, gases and liquids under low pressure conditions. A strong flexible material with a useful working temperature range of −70°C to +80°C, it is odorless, tasteless, non-toxic, non-corrosive and fungus-resistant. Easily installed using standard fittings.

FLEXTECH U-585 POLYURETHANE is one of the most versatile of materials, combining long life with high working-pressure ratings, superb resistance to fuels and solvents, excellent flexibility, high resistance to abrasion, and low moisture absorption. U-585 preserves its rubber-like pliability and resistance to kinking over a temperature range of −70°C to +105°C, making it suitable for cryogenic use where clamped or pinched to control fluid flow.

FLEXTECH RETRACTABLE NYLON AIR HOSE is a seamless-extruded, abrasion-resistant, long life nylon hose that is helically coiled for spring-like action. It extends easily with minimum resistance and automatically retracts to its original coil configuration upon release. This self-storing feature keeps hose off the floor and out of the way, eliminating the need for expensive reel devices. It never becomes twisted or tangled, has long life, is lightweight and flexible, making it easy to use with any type of air-powered tool. Retractable air hose will not absorb oil and can be used to feed lubricant in air stream.

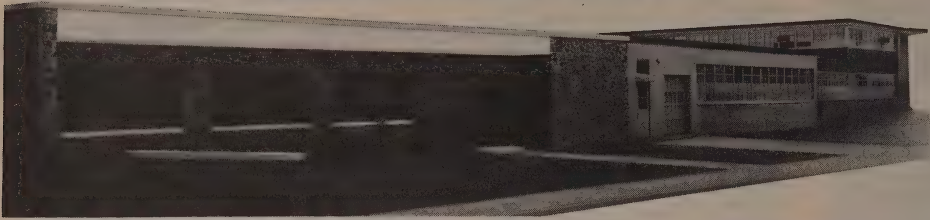
reliable products delivered on time

VARFLEX

the complete line of electrical insulating sleeving and tubing



Whatever your problem, heat, cold, flexibility miniaturization, high insulating or dielectric strength—Varflex can supply the required reliability and delivery. Our rapidly expanding plant is fully equipped to supply sleeving for any combination of characteristics you may need. In addition to maintaining large stock for off-the-shelf delivery, Varflex has the productive capacity to provide prompt delivery (often 48 hours) on special orders. As insulation specialists, we are ready to work with you on unusual specifications or applications.

Here is a brief description of Varflex products

VARGLAS SILICONE RUBBER SLEEVING. The ultimate in flexibility, yet dielectric protection to 8000 volts. Class H-A-1 certified to meet Government Specification MIL-I-3190/6 (formerly MIL-I-18057A) Class H-B-1 (4000 volts) available, also. Continuous exposure from —70° to 400°F. does not affect coating or Fiberglas braid. Class H-C-1 (2500 volts), Class H-C-2 (1500 volts) and Class H-C-3 also available.

VARGLAS SILICONE RESIN SLEEVING. Class H-A-1 is recommended for applications requiring extremes of heat endurance and high dielectric strength (7000 volts). Class H-B-1 is identical except for dielectric guarantee (4000 volts). Good abrasion resistance. Class H-A-1 meets the requirements of MIL-I-3190/5. Four other standard grades available where 7000 volt test not important.

SILFLEX SLEEVING. A light coating of Silicone resin on Fiberglas braid. Extremely flexible within a temperature range from minus 85°F. to 500°F.

VARGLAS SILICONE LEAD WIRE. Made from solid or stranded wire covered with one or more walls of Fiberglas braid and impregnated with Silicone. Built to your specifications.

VARGLAS SILICONE TYING CORDS. Continuous filament Fiberglas cords impregnated with Silicone resin, 1/64″ to 1/8″ diameter. Specify Type 46 for dry cure, Type 48 for tacky cure.

VARGLAS S1600 SLEEVING. Newest development in Fiberglas yarn. Will retain "life" at temperatures up to 1600°F. (400 degrees higher than E glass).

VARGLAS POLYURETHANE CLASS F SLEEVING. Made with Polyurethane resins on Fiberglas braid. Offers better than Class B heat resistance (up to 155°C continuously). Available in F-A-1, F-B-1 and F-C-1 grades.

VARGLAS ACRYLIC CLASS F SLEEVING. Highly resistant to acids, organic solvents, oils and water and exhibits fair resistance to alkalies. It is compatible with polyester, acrylic, epoxy, phenolic and formvar wire enamels. Designed to perform for long periods in the 155°C range without loss of any electrical or physical properties. Available in five grades. Class F-A-1 (7000 volts) meets the requirements of MIL-I-3190/3.

VARFIL SLEEVING. Fiberglas braids impregnated with polyester resin. Four grades available in coils as well as 36″ lengths in most sizes. In a class by itself because of its toughness, flexibility, high temperature resistance and ability to withstand bending and twisting without dielectric loss. Compatible with varnish. Over 1000 hours at 125°C., with intermittent operation at 150°C.

VARFLO SLEEVING. Class B insulation. Good flexibility, solvent, oil and moisture resistance. The A grade passes 90° Navy bend test after 2000 hours at 300°F. with 3500 volt end point. Varflo has good shelf life and will not lose dielectric strength when subjected to severe twisting. Classes B-A-1, B-B-1 and B-C-1 are available. Flame and fungus resistant if specified. B-A-1 approved under MIL-I-3190/2 (formerly MIL-I-21557B).

VARGLAS VARNISHED SLEEVINGS. Flexible continuous coatings of flame resistant oleoresinous varnish built up over fine Fiberglas braids in several carefully controlled operations. Operate at temperatures up to 130°C continuously. Available in five grades.

VARGLAS LECTON SLEEVING. Specifically designed for hermetic motors. Non-contamination of Freon and other refrigerants in Class B motors. B-A-1, B-B-1, and B-C-1 grades.

VARGLAS NON-FRAY SLEEVINGS. Type H: The normalizing treatment given the Fiberglas braid removes the organic impurities and tends to hold the individual filaments together. The lack of any bonding agent means it may be subjected to temperatures as high as 1200°F. Recommended for applications where dielectric requirements are not of prime importance. Resists fungus and is non-corrosive. Type HP: Similar to Type H, but dyed various colors for coding purposes. Ideal as secondary insulation where primary covering might disintegrate due to high temperature or continual flexing. Colors may fade at 300°F. Type HO: A very light treatment of resin added after the braid has been normalized — just enough to hold the sleeving round for accurate cutting. Will distend to cover soldered joints or terminals. Avaliable in eight colors. Colors fade at 300°F., but sleeving unaffected up to 1200°F. Best of the three from a non-fray standpoint.

VARGLAS LITEWALL SLEEVINGS. Wall thickness of Type A is .008″ and of Type B, .006″. These extremely flexible, finer braids are supplied untreated, heat treated and/or dyed. Produced in fractional sizes. Because of the construction, one size can be used to cover several different wire sizes. Specify Type HA or HB if heat treated braids preferred.

SYNTHOLVAR EXTRUDED TUBING. Made from vinyl polymers. High dielectric and tensile strength. Will not support combustion nor absorb moisture. Smooth surface, thin wall and flexibility all make for ease in assembling operations. Type SHH recognized by U/L for 105°C applications. Type LT will function at temperatures down to —50°C. Specify fungus resistant tubing where needed. Special formulations for high and low temperature environment. Made to meet applicable Government Specifications MIL-I-631 and MIL-I-7444.

RAYON SLEEVING. These sleevings are varnish impregnated. NEMA grades A-A-1, A-B-1, A-C-1, A-C-2 and A-C-3 readily available.

NYLON UNTREATED SLEEVING. This product has outstanding abrasion resistance and is the ultimate in flexibility. It is intended for use over insulated wire and cable, not as primary insulation.

RF Filters, Converters, Switches, Amplifiers, Multipliers, Signal Sources, Multicouplers

FIXED PAD ATTENUATORS & TERMINATIONS (DC—3 GHz)

FOR TYPES BNC, TNC C, N & OSM CONNECTORS

Integrated line of fixed pad attenuators, terminations and impedance-matching transformers provides means for rapid and accurate division of voltages over the frequency range of DC to 3 GHz, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

General characteristics:

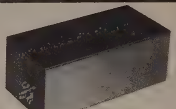
Frequency Range:	DC—3 GHz
VSWR:	1.25:1
Attenuation Accuracy:	±0.5 dB
Impedances (nominal):	50, 75, 90 ohms
Attenuation values:	1, 2, 3, 4, 6, 10, 12, 15, 20 dB (standard)

MULTICOUPLERS

Model HFM Series is designed to meet the needs of most systems.

General features:
- High isolation between outputs
- High dynamic range
- Low noise
- Modular construction
- Solid-state
- Octave bandwidth (if desired)

Model PM Series of passive multicouplers provides the ultimate performance in signal distribution.



BROADBAND MULTIPLIERS (5-18,000 MHz)

These units utilize solid state devices.

Using the frequency multiplier as the basic tool, lines of Signal Sources, Frequency Synthesizers and Multiplier Chains are now available.

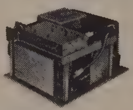
General characteristics:

Frequency Range:	5-18,000 MHz
Bandwidths:	up to 27%
Power Output:	up to 5 watts
Efficiency:	as high as 50%

SWITCHES (10-1000 MHz)

A series of computer compatible solid state switches using PIN diodes in a broadband stripline matching structure. Can be directly addressed without interfacing. Units available with equal path lengths to all outputs, providing good phase coherence with phase and amplitude tracking on all ports. Switch matrix configurations are also available.

General Characteristics:
- Frequency Band: 10-1000 MHz
- Switch Configuration: 1x2 to 1x30
- Isolation: 70 dB min. (higher available)
- Insertion Loss: 1.0 dB max.
- VSWR: 1.2:1
- Operation Time: 1.0 μsec.
- Primary Power: ±4.5V, 50ma per crosspoint
- Sizes: 2" to 16"L x 4"W x ½"H



CONVERTERS

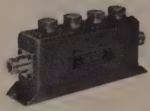
State of the art converters available for military or commercial application throughout the frequency range. All units are constructed to meet mil applications.

TELEMETRY CONVERTERS

These units permit the ready adapting of existing UHF telemetry receiving equipment for use in the 1435 to 1540 and 2200 to 2300 MHz telemetry band with high conversion gain.

General characteristics:

Long term stability:	better than ±.1 PPM over temperature range
Image rejection:	>than 50 dB
Noise figure:	better than 5 dB for 100 mc bandwidth (2.2 to 2.3 GHz)

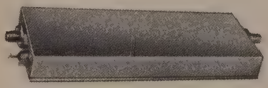


FILTERS (5-12,000 MHz)

Advanced network design techniques have developed filters operating in the frequency range up to 12,000 MHz. With electrical performance approximating theoretical expectations. In addition to Bandpass, Band Reject and Multiplex Filters, advanced network designs are available for antenna couplers, Diplexers, Interdigital Filters and many other types.

General characteristics:

Frequency Range:	5-12,000 MHz
Bandwidths:	up to several octaves
Insertion Loss:	as low as 0.25 dB
Power:	up to 3.5 kW (cw)
Band Reject Notches:	as narrow as ¼ % fo
Band Reject Attenuation:	as great as 75 dB



SOLID STATE RF AMPLIFIERS

(Power, low-noise, broadband, phase matched, linear and high dynamic range)

Constructed to meet mil and missile applications.

General characteristics:

Frequency Range:	up to 4 GHz
Bandwidths:	up to multiple octaves
Phase matching:	to within 1° over an octave
Noise figure:	as low as 1.5 dB
Gains:	up to 120 dB
Power output:	>than 20 watts

TUNABLE BAND REJECT FILTERS (5-2000 MHz)

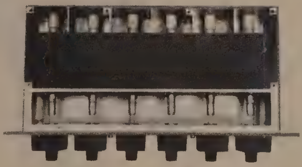
Tunable multicontrol band reject filters provide high rejection of more than one and up to eight unwanted signals, or, extreme rejection of one. Low insertion loss and sharp skirt selectivity in the band reject region. Eight knobs and counter readout allow continuous tuning.

General Characteristics:
- Center Frequency: 5-2000 MHz
- Out-of-Band Insertion Loss: 0.5 dB
- Notch Bandwidth: narrow as ¼ % fo
- Notch Depth: 20 dB/section
- VSWR (outside of notch region): 1.5:1
- Size: 24" x 2" x 8"
- Connectors: BNC

BAND REJECT FILTER (225 to 400 MHz)

Single knob control band reject filters reject unwanted signals, with extreme selectivity through L-band. Tune ranges of nearly an octave can be obtained. Units are tunable over the range 225 to 400 MHz. The bandwidth is >1 MHz at the 60 dB points. Total notch depth is 60 dB. Use of helical resonators provides for high rejection and low insertion loss in the passband of <1 dB. The phase linearity in the passband is achieved by utilizing quarterwave coaxial lines.

PERFORMANCE SPECIFICATIONS
Insertion Loss (out of notch region): 1 dB
Notch Range: 225 to 400 MHz
Typical Notch Specs: Frequency 225.2 MHz;
1 dB bandwidth 11.1 MHz;
Depth 68 dB
Impedance (I & O): 50 ohms
VSWR (I & O) (out of notch region): <1.3:1
Group Delay (out of notch region): <20 ns

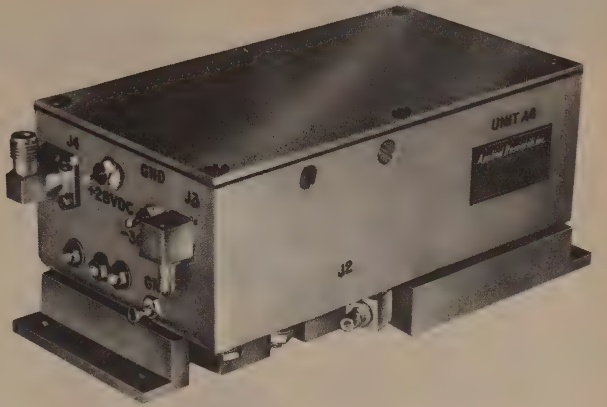


BAND REJECT FILTER (240 to 365 MHz)

Band reject filters operating from the HF range to K-band exhibit a wide bandpass frequency range without reentrances. Resonant elements are independently tuned or ganged to a single knob control. Operation is over frequency ranges greater than one octave, providing high rejection at one frequency or rejection by greater than 15 to 20 dB to as many as six separate and independent frequencies within the band.

Two or more notches can be aligned to adjacent frequencies to vary the depth and/or bandwidth of the band rejection curve. With all rejection notches tuned to a single frequency, the resultant response is such that an undesired signal approximately one percent away from a desired signal is attenuated by more than 70 to 80 dB while the desired signal is passed with only a 1 dB insertion loss.

PERFORMANCE SPECIFICATIONS
Insertion Loss (out of notch region):
<1 dB 100 to 1000 MHz
Bandpass: DC to 1000 MHz
Notch Frequency: 240 to 365 MHz
Typical Rejection below Passband: 240 MHz/23 dB; 325 MHz/19 dB; 365 MHz/17 dB
Impedance (I & O): 5 ohms
VSWR (I & O): < 1.35:1



Frequency Generation thru Multiplication & Phase-Lock techniques

VHF to Ku-Band (10 MHz to 1.5 GHz)

Applied Research offers many proven designs using both techniques. And we're capable of meeting your exact requirements, precisely.

Our Phase-lock loops, comprised of I.C. components, together with RF devices, yield outputs of up to 10 watts at microwave frequencies. And our multipliers are available as passive devices or in combination with amplifiers having multiplication factors of from 2 to 2000. In combination with varactor multiplier devices output in Ku-band can be obtained.

What's more, we can supply crystal oscillators or internal drivers to provide a self-contained source.

SOME PERFORMANCE SPECIFICATIONS

Phase-Lock Signal Source
Output: 494 MHz @ 10 watts
Stability: .005% from internal crystal oscillator

Phase-Lock Synthesizer
Input: 6 MHz & 200 MHz @ 10 dBm each
Output: 218, 224, 230, 236, 242, 248, 254, 260 MHz @ 10 dBm each
Spurious: 60 dBc min.

Ku-Band Multiplier
Input: 45.5 to 46.1 MHz @ 1 dBw; (other inputs available)
Output: 15.3 to 15.5 GHz @ 100 milliwatts
Spurious: 60 dBc min.

C-Band Multiplier
Input: 50.3 to 51.5 MHz @ 1 milliwatt; (other inputs available)
Output: 5030 to 5150 MHz @ 200 milliwatts
Spurious: 60 dBc min.

Attenuator Characteristics

Identical to the specific variable attenuator model selected.

General Description

ARRA offers a rugged line of motor driven a tenuators. Ideally suited for remote tuning applications. The ultimate in reliability and maintenance free operation.

The motors are integral gear head types. Units consist of an integrated motor gear head and single turn variable attenuator. All models feature fast stopping time and minimum backlash. Available with an optional follower potentiometer output; local override switch mounted directly to the motor head.

Broadband Diode Switches

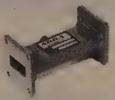
Operate over the complete waveguide frequency band.

Frequency Bands: 2.60-18.0 GHz.
Isolation: To 85 dB.
Switching Speed: 10 nsec.

Continuously Variable Attenuators

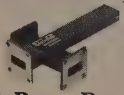
Frequency Bands: 3.95-18.0 GHz.
Attenuation Range: 25 dB min.
Max. VSWR: 1.15.
Insertion Loss: 0.5 dB max.

Fixed Attenuators



Frequency Bands: 2.6-18.0 GHz.
VSWR: 1.15.
Attenuation: 3, 6, 10, 20 dB (other values on request).
Attenuation Accuracy: ±0.2 dB at calibrated frequency.

Cross Guide Couplers



Frequency Bands: 2.60-18.0 GHz.
Coupling: 20, 30, 40 dB.
Directivity: 15 dB min.
Frequency Sensitivity: ±1.3 dB.

High Power Dummy Loads

Frequency Bands: 2.6-18.0 GHz.
Max. VSWR: 1.10 (typical 1.05).
Material: Aluminum.
Finish: High temperature black paint.

ARRA will fabricate your special waveguide assemblies in any material, finish, and in most waveguide sizes.

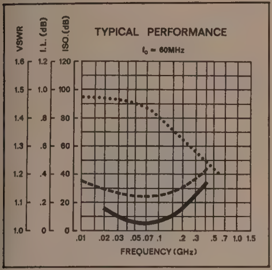
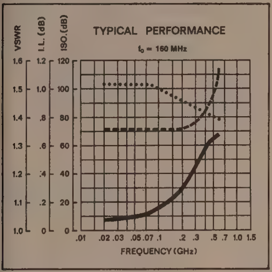
DAICO INDUSTRIES, INC.

MULTIPOLE DIODE SWITCHES

STANDARD



HIGH ISOLATION



•••• ISOLATION ▬ VSWR ‒ ‒ ‒ INSERTION LOSS

Daico Industries standard line of multiposition diode switches provides the lowest switching transients and insertion loss consistent with speed and RF power. All the units listed below are compatible with TTL logic. The self-contained driver utilizes complex function IC's to improve reliability and reduce size. These units are designed to operate in the most hostile of military, land, sea and airborne environments.

Special specification diode switches available from Daico include high-speed units for less than 25 nanosecond operation, RF units to 3 GHz, and high-power units to 1KW CW with up to 8KW peak load capabilities.

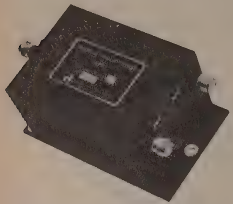
RF SWITCH MATRICES • MODULATORS • PHASE SHIFTERS • ATTENUATORS

HIGH POWER DIODE SWITCHES

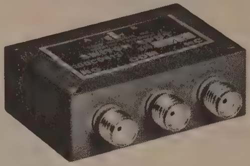


Daico Industries high-power diode switches have been successfully employed in numerous CW and pulse systems. CW power levels to 400 W are available in frequency ranges from 20-1100 MHz. Pulse power levels to 8 KW are available in frequency ranges of 50-1500 MHz.

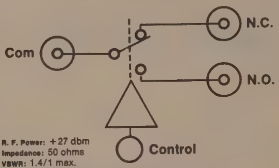
Representative designs (Can be adapted to other frequency ranges and power levels.)

P/N	Freq. MHZ	Power Watts CW	Power Peak	Isolation db min.	Insertion Loss db max.
100C0557	30-250	250	1 KW	75	0.2
100C0657	50-200	200	1 KW	45	0.3
100C0638	100-1400	10	300	50	0.5
100C0495	950-1225	10	3.5 KW	28	1.0

HIGH SPEED, LOW TRANSIENT DIODE SWITCHES

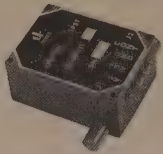


The SP2T High Speed Low Transient Diode Switch, Daico Industries Part Number 100D0812, is noted in the adjacent schematic. This unit has similar performance to the high speed modulator, 100D0811. The through channel is available for data immediately following the 30 nanosecond RF switching period. Other specifications:

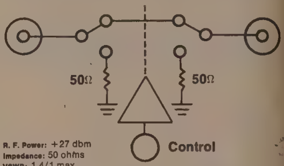


R. F. Power: +27 dbm
Impedance: 50 ohms
VSWR: 1.4/1 max.
Isolation: 40 db min. at 350 MHz, 60 db min. at 150 MHz
Insertion Loss: 3 db max.
Size: 1½ x 2 x 1 inches

HIGH SPEED, LOW TRANSIENT MODULATORS

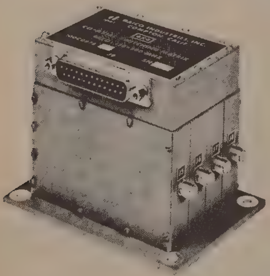


The Daico Industries Part Number 100D0811 is presented schematically with 50 ohm terminations for both ports when in the OFF condition. This unit is available in the frequency range from 60-400 MHz with 30% bandwidths. The TTL control and driver delay will consume approximately 20 nanoseconds with the RF switching and settling in less than 30 nanoseconds. The pass band transients do not exceed 10 MV peak. This SPST switch modulator is designed to preclude ringing thus allowing the full utilization of the data channel.



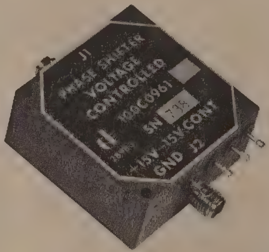
R. F. Power: +27 dbm
Impedance: 50 ohms
VSWR: 1.4/1 max.
Isolation: 40 db min. at 350 MHz, 60 db min. at 150 MHz
Insertion Loss: 3 db max.
Size: 1½ x 2 x 1 inches

RF SWITCH MATRICES



Daico Industries M x N RF matrices are available with both relay and solid state cross point connections through 12 x 12 positions. The unique design concept assures maximum isolation and minimum VSWR through 500 MHz. Higher frequency matrices are offered with fewer poles. The unit pictured above, P/N 100D0874, describes a 4 x 4 solid state unit covering the 150-500 MHz frequency band. Remote control panels are available with electronic interlocks and indicators as companion equipment.

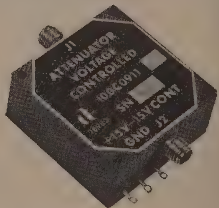
SOLID STATE VOLTAGE CONTROLLED PHASE SHIFTERS (ANALOG)



Daico Industries voltage controlled phase shifters are available in frequency ranges from 50-500 MHz. These units have a maximum RF power capability of +10 dbm with a 50 ohm impedance. Other specifications are listed below.

Frequency: Specify Center Frequency
Bandwidth: 20%
Insertion Loss: 3 db max.
Range: 360° continuous
Linearity: 10% max.
Scale Factor: 72°/volt
Power: ±15 volts
Slew Rate: 180°/millisec.
Size: 3 x 5 x 2
Connectors: SMA
Part Number: 100D0590

VOLTAGE CONTROLLED ATTENUATORS (ANALOG)



Daico Industries voltage controlled attenuators are analog devices offered in two octave band widths from 10-500 MHz. These solid state units have a maximum RF power of +10 dbm with a 50 ohm nominal impedance. The following specifications and part numbers apply. Information on other custom designs will be forwarded on request.

Power: ±15 Volts at 25 ma. nom./section
Control: 0 to +5 Volts
Slew Rate: 2 x Range/millisec.
Linearity: ±5% of range
Connector: SMA

PHASE SHIFTERS • PROGRAMMABLE/STEP ATTENUATORS

PHASE SHIFTERS

The IF series multi-bit phase shifters are also available with solid state or relay combining elements. The narrow band device uses various lengths of coaxial line to vary phase. The frequency of the solid state version covers 20-1000 MHz while those employing the relay combining elements are available in 20-500 MHz. Available with TTL compatibility. An LSB of 0.10 degrees can be readily provided.

HIGH SPEED PROGRAMMABLE PHASE SHIFTERS

High speed phase shifters in the ange of frequencies of 200 MHz - 1200 MHz feature 35 nanosecond ransition times with useful data within 50 nanoseconds of switching command. The phase shifter is compatible with computer controlled sampled data systems at rates up to 10MHz.

Typical of this type phase shifter is he 100D0693 which features 1.2 db nsertion loss, 1.25/1 VSWR, and accuracies of ±2 degrees over a 360 degree phase shift range. The phase shifter is controlled by TTL logic in 6 steps of 180°, 90°, 45°, 22.5°, 11.25°, and 5.6° at 435 MHz.

HIGH SPEED IF ATTENUATORS

Daico Industries high speed solid state programmable attenuators are available in frequency bands from 50-500 MHz with less than 35 nanoseconds switching speeds.

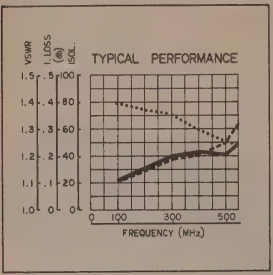
They are offered with MSB sections as high as 32 db and LSB sections as low as 0.2 db. Integral drivers are provided to operate from TTL or ECL levels.

Switching transients are less than 10 MV peak from 50 - 500 MHz. In-band transients are less than −50 dbm peak at 50 MHz and less than −80 db at 500 MHz.

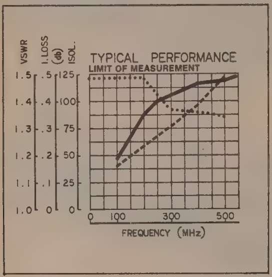
Attenuators in the band of 400 through 1200 MHz are available with similar specifications. Bandwidths of 25% around center frequencies in this range are provided at insertion losses on the order of 0.6 db/section, and VSWR of 1.5/1.

RF RELAYS, DC-500 MHz, 50 watts cw

STANDARD



HIGH ISOLATION



•••• ISOLATION ▬ VSWR --- INSERTION LOSS

Daico Industries RF relays employ hermetically sealed switching elements which provide extreme resistance to the severe environments encountered in military aircraft and communications systems, including 20 g's vibration to 3 KHz, 80 g's shock and altitude in excess of 100,000 ft. A continual test and evaluation program assures switch performance in excess of 20 million operations. These units are operable at extremely low current levels and may be ordered with 6-, 12- or 24-volt coils. Units also available to 1.5 GHz with 50 ohm termination, reference SP2T P/N 100C0878.

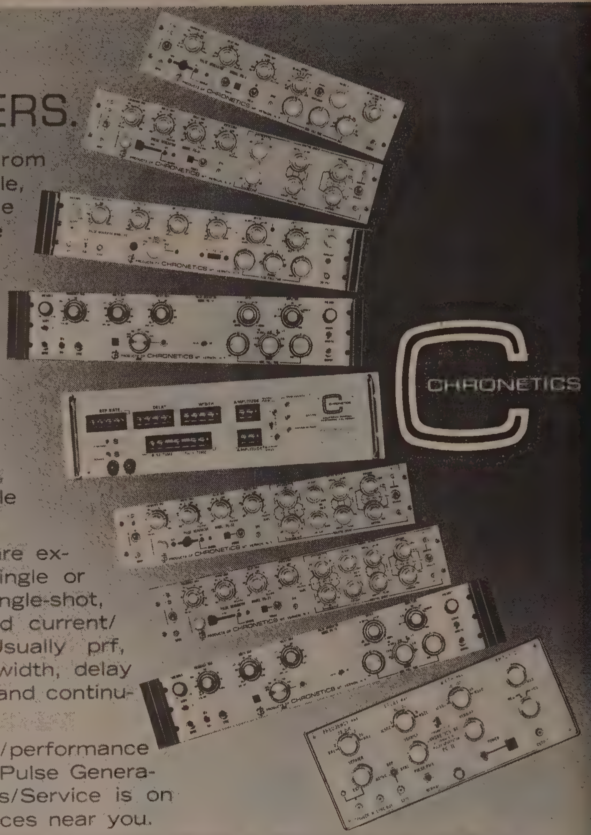
THE ***PLUS*** PULSERS.



Advanced Pulse Generators from CHRONETICS: The most versatile, sophisticated, high performance pulsers in the field. State of the art circuit design, meticulous construction for reliable quality. Performance and flexibility second to none. Thirteen standard models for virtually every need.

Repetition rates from 0.1 Hz to 100 MHz, output amplitudes from 0 to ±100 volts or ±2A, rise/falltimes of less than 2 ns, wide dynamic ranges, high duty cycles, bipolar outputs, etc. are all available on standard instruments.

Chronetics' Pulse Generators are exceptionally flexible. All provide single or double pulses of either polarity, single-shot, pulse bursts. Bipolar outputs and current/voltage modes are available. Usually prf, amplitude, risetime and falltime, width, delay and DC-offset are independently and continuously variable.

"Total Pulse Control" and price/performance engineering make CHRONETICS' Pulse Generators the best buys in the field. Sales/Service is on a world-wide basis with field offices near you.

CHRONETICS Advanced Pulse Generators

MODEL	CLOCK PRF	AMPLITUDE^2	Z OUT	RISE/FALL TIME	PULSE DURATION	PULSE DELAY	DUTY CYCLE (MAX)	DC OFFSET
PG-10	0.1 Hz-50 MHz	5 mV-10V + or −	50 ohms or 1K, min.	< 5 ns	15 ns-1 sec	15 ns-1 sec	To 100%	± 2V ±40 mA
PG-11A	<10 Hz->50 MHz	0-15V + or −	8 ohms	<5 ns	15 ns-10 ms	20 ns-10 ms	85%	
PG-12	0.1 Hz-50 MHz	100 mV-10V + or −	50 ohms	<5 ns-1 sec^4	10 ns-1 sec	15 ns-1 sec	To 100%	±10V
PG-13B	1 Hz-25 MHz	100 mV-100V + or −	50 ohms or 1K, min.	<10 ns-50 ms^4	10 ns-500 ms^5	15 ns-500 ms	10% @ 2A 50% @ 1A 100% @ < 0.5A	±5V ±100 mA
PG-14	1 Hz-50 MHz	100 mV-20V + or −	50 ohms or 10K, min.	2 ns-50 ms^4	<5 ns-500 ms	10 ns-500 ms	To 100%	±5V ±100 mA
PG-16	1 Hz-100 MHz	100 mV-20V + or −	50 ohms or 10K, min.	2 ns-50 ms^4	<5 ns-500 ms^5	10 ns-500 ms	To 100%	±5V ±100 mA
PG-32A	0.1 Hz-10 MHz 20 MHz Max.^{1}	20 mV-20V^3 + and − 2 Channels	50 ohms or 500 ohms	5 ns-1 sec^4	< 30 ns-1 sec^5	50 ns-1 sec	To 100%	To 10V To 400 mA
1012P^6	10 Hz-9.99 MHz 20 MHz Max.^{1}	0-9.9V^2 + or −	50 ohms	5 ns-9.9 ms^4	40 ns-9.9 ms	25 ns-9.99 ms	85%	±9.9V

1 Effective PRF in double pulse mode
2 Max. Range into 50-ohm loads
3 Separate or combined (bipolar) channels; same polarity on Special Order
4 Variable linearly -Separate control of Rise and Fall Times
5 Independent control Pulse 1 /Pulse 2 (double pulse mode)
6 Fully programmable

MICROWAVES' PRODUCT DATA DIRECTORY

Over 650 pages thick, loaded with time-saving information.

- 420 pages of data sheets, inserts from 96 microwave OEM manufacturers. Names of their presidents, marketing/ sales managers, all sales offices. Also their complete rep list with addresses and phone numbers.
- Over 2,500 manufacturers listed with addresses and phone numbers.
- More than 250 pages of informative listings.
- 8 major product areas
  - Antennas
  - Materials and Processing Equipment
  - Passive Components
  - Semiconductors
  - Solid-State Components
  - Systems and Subsystems
  - Test Instruments
  - Tubes and Tube Amplifiers
- 195 product categories.
- Direct-response cards for immediate action.

MicroWaves' Product Data Directory is the most current, up-to-date, comprehensive compilation of microwave product information available anywhere, at any price. **Use the directory often — let it work for you!** **Price: $10.00**

World's largest supplier of double balanced mixers
Mini Circuits Laboratory 837-843 Utica Avenue, Brooklyn, NY 11203 (212) 342-2500

Be prepared...
Kit includes Original Swiss Army knife at no extra cost
for emergency needs...and design improvements

25 KHz - 1000 MHz

Double-Balanced Mixer Kit $79.95

SAVE $36.90 AND ALSO GET AN ORIGINAL SWISS ARMY KNIFE

Be prepared to . . .

- *. . . meet emergency customer needs*
- *. . . outfit breadboards and prototypes overnight*
- *. . . customize designs without delay*
- *. . . retrofit and update designs*
- *. . . modify and substitute for better performance or price*
- *. . . and to cut, skin, slice, sever, snip, saw, screw, scribe, shape, scrape, strip, pick, pry, punch, trim with the Swiss Army knife included in kit.*

There's an analogy between the popular Swiss Army knife and Mini-Circuits Laboratory's new double-balanced mixer kit (DBK-5). Both have been designed to serve their owner when the need arises . . . and both products should be on hand when the need arises.

MODEL	Frequency Range (MHz)	Conversion Loss (dB) Total Range	Isolation (dB)

DESIGNERS' SELECTION GUIDE

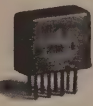
DOUBLE-BALANCED MIXERS

STANDARD LEVEL (+7dBmLO)

SRA SERIES
Low cost, miniature size. Frequency coverage from 500 Hz to 1250 MHz. Features 6 dB conversion loss, 40 dB isolation. Operates at −54°C to +100°C. The SRA-1 double balanced mixer is industry standard and number one volume leader. Small quantity prices at $9.95.

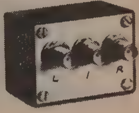
TAK SERIES
Low profile, miniature size, only 0.2 inches high. Frequency coverage 10 KHz to 1250 MHz. Features 6 dB conversion loss, 40 dB isolation. Operates −54°C to +100°C. Small quantity prices start at $19.95.

TSM SERIES
Frequency coverage from 100 KHz to 500 MHz. Low profile, micro-miniature size. Only 0.25 inches high, requires only 0.2 by 0.5 inches of PC board area. Smallest units available in industry. Features 6 dB conversion loss, 40 dB isolation, −54°C to +100°C operation. Small quantity prices start at $16.95.



SAM SERIES
Frequency coverage from 100 KHz to 1500 MHz. Micro-miniature size, requires only 0.2 by 0.5 inches of PC board area. Features 6 dB conversion loss, 40 dB isolation. Operates at −54°C to +100°C. Small quantity prices start at $15.95.

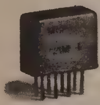
ZAD SERIES
Cast aluminum case. 2.25 inches long. BNC connectors standard, TNC on request. Frequency coverage from 500 Hz to 1250 MHz. Conversion loss 6 dB, isolation 40 dB. Operates at −54°C to +100°C. Small quantity prices start at $24.95.



ZLW SERIES
Cast aluminum case, miniature size 1.5 inches long. SMA (3mm) connectors standard. Frequency coverage from 500 Hz to 1500 MHz. Conversion loss 6 dB, isolation 40 dB. Operates at −54°C to +100°C. Small quantity prices start at $34.95.

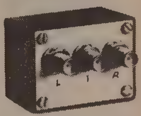
HIGH LEVEL (+17dBmLO)

SRA-H SERIES
Miniature size, provides frequency coverage from 50 KHz to 1000 MHz. Features 6 dB conversion loss, 40 dB isolation, temperature range −54°C to +100°C. Offers increased dynamic range, 1 dB compression point at +10 dBm RF input. Small quantity prices start from $15.95.



SAM-H SERIES
Micro-miniature size, requires same PC board area as a TO-5 transistor case. Premium high performance units. Frequency coverage from 100 KHz to 1000 MHz. Temperature range −54°C to +100°C, constructed for tough military requirements. Small quantity prices start from $19.95.

ZAD-H SERIES
Cast aluminum case, BNC, or TNC connectors. Double shielded for tough EMI requirements. Frequency coverage from 50 KHz to 1000 MHz. Features 6 dB conversion loss, 40 dB isolation. Offers increased dynamic range, 1 dB compression point at +10 dBm RF input. Small quantity prices start from $30.95.

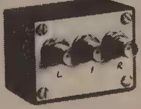


ZLW-H SERIES
Cast aluminum case, miniature size, 1.5 inches long. SMA (3mm) connectors standard. Frequency coverage from 50 KHz to 1000 MHz. Features 6 dB conversion loss, 40 dB isolation. Offers increased dynamic range, 1 dB compression point at +10 dBm RF input. Small quantity prices start at $40.95.

VERY HIGH LEVEL (+23dBmLO)

RAY SERIES
Miniature size, provides frequency coverage from 70 KHz to 1000 MHz. Features 6.5 dB conversion loss, 40 dB isolation, temperature range −54°C to +100°C. Offers extra increased dynamic range, 1 dB compression point at +15 dBm RF input. Small quantity prices start from $31.95 each.

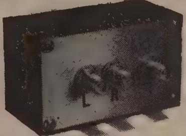
ZAY SERIES
Cast aluminum case, BNC connectors standard, TNC on request. Double shielded for tough EMI requirements. Frequency coverage from 70 KHz to 1000 MHz. Features 6.5 dB conversion loss, 40 dB isolation. Offers extra increased dynamic range, 1 dB compression point at +15 dBm RF input. Small quantity prices start from $41.95.



ZMY SERIES
Cast aluminum case, miniature size 1.5 inches long. SMA (3mm) connectors standard. Frequency coverage from 70 KHz to 1000 MHz. Conversion loss 6 dB, isolation 40 dB. Operates at −54°C to +100°C. Small quantity prices start at $51.95.

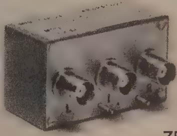
MICROWAVE MIXERS

MA SERIES — DOUBLE BALANCED
Cast aluminum case, SMA (3mm) connectors. Model MA-1 provides exceptionally broad frequency coverage 1 MHz to 2500 MHz. LO power +10 dBm, isolation greater than 40 dB, conversion loss 9.5 dB. Ruggedly constructed for tough military requirements. Single unit price only $99.95.



ZMA SERIES — BALANCED
Cast aluminum case, 2.25 inches long. SMA (3mm) connectors standard. Frequency coverage from 1.0 to 3.0 GHz. Conversion loss 7 dB, isolation 30 dB. Operates at −54°C to +100°C. Small quantity prices start at $49.95.

DOUBLE-BALANCED FET MIXERS



ZRC SERIES
Cast aluminum case, 2.25 inches long. BNC connectors standard, TNC on request. Frequency range 1.0-200 MHz. Ultra-low distortion. Two-tone, third order intercept point +30 dBm. Conversion gain 0 dB. DC power +15 V, 45 mA. From $79.95 in small quantities.

Mini-Circuits Laboratory

DESIGNERS' SELECTION GUIDE

POWER SPLITTERS/COMBINERS

TWO-WAY 0°

PSC-2 SERIES

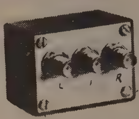
Miniature size, provides frequency coverage from 2 KHz to 400 MHz. Low insertion loss .5 dB. high isolation 40 dB, amplitude unbalance typically .05 dB, phase unbalance typically less than 1 degree. Temperature range is from −54°C to +100°C. Economically priced from $9.95 in small quantities.

MSC-2 SERIES

Micro-miniature size, requires same PC board area as a TO-5 transistor case. Model MSC-2-1 covers 0.1 to 450 MHz. Premium performance of low insertion loss .5 dB, high isolation 35 dB, amplitude unbalance less than .05 dB, phase unbalance less than 1 degree. Ruggedly constructed for military applications. Priced at $16.95 each in small quantities.

ZSC-2 SERIES

Cast aluminum case, BNC, or TNC connectors. Frequency coverage from 2 KHz to 400 MHz. Low insertion loss .5 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −54°C to +100°C. Small quantity prices start from $24.95 each.



ZMSC-2 SERIES

Cast aluminum case, miniature size 1.5 inches long. SMA (3mm) connectors standard. Frequency coverage from 2 KHz to 400 MHz. Low insertion loss .5 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −54°C to +100°C. Small quantity prices start from $34.95 each.

TWO-WAY 90°

PSCQ-2 SERIES

Miniature size. Frequency coverage from 25 MHz to 400 MHz. Low insertion loss .3 dB. Isolation 25 dB. Phase deviation from quadrature 1° typically. Temperature range −55°C to +100°C. From $19.95 in small quantities.

TWO-WAY OUT OF PHASE 180°

PSCJ-2 SERIES

Miniature size. Frequency coverage from 1 MHz to 200 MHz. Low insertion loss .5 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −54°C to +100°C. Small quantity prices start from $19.95 each.

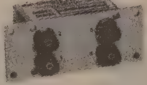
ZSCJ-2 SERIES

Cast aluminum case, BNC, or TNC connectors. Frequency coverage from 1 MHz to 200 MHz. Low insertion loss .5 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −54°C to +100°C. Small quantity prices start from $34.95 each.

THREE-WAY 0°

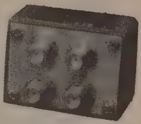
PSC-3 SERIES

Miniature size. Frequency coverage 10 KHz to 200 MHz. Low insertion loss .4 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −55°C to +100°C. Small quantity prices start at $19.95.



ZSC-3 SERIES

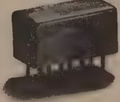
Cast aluminum case, 2.25 inches long. BNC connectors standard. TNC on request. Frequency coverage 10 KHz to 200 MHz. Low insertion loss .4 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −55°C to +100°C. Small quantity prices start at $34.95.



ZMSC-3 SERIES

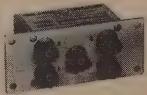
Cast aluminum case, miniature size 1.5 inches long. SMA (3mm) connectors standard. Frequency coverage 10 KHz to 200 MHz Low insertion loss 4 dB, high isolation 40 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −55°C to +100°C. Small quantity prices start at $44.95.

FOUR-WAY 0°



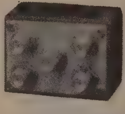
PSC-4 SERIES

Miniature size. Frequency coverage 100 KHz to 250 MHz. Low insertion loss .5 dB, high isolation 30 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −55°C to +100°C. Small quantity prices begin at $23.95.



ZSC-4 SERIES

Cast aluminum case, 2.25 inches long. BNC connectors standard. TNC on request. Frequency coverage 2 KHz to 250 MHz. Low insertion loss .5 dB, high isolation 30 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −55°C to +100°C. Small quantity prices begin at $38.95.



ZMSC-4 SERIES

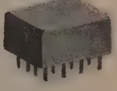
Cast aluminum case, miniature size 1.5 inches long. SMA (3mm) connectors standard. Frequency coverage 2 KHz to 250 MHz. Low insertion loss .5 dB, high isolation 30 dB, amplitude unbalance .05 dB, phase unbalance 1 degree. Temperature range −55°C to +100°C. Small quantity prices begin at $48.95.

SIX-WAY 0°

PSC-6 SERIES

Miniature size, .8 inches square. Frequency coverage from 1.0 to 175 MHz. Low insertion loss .7 dB. High isolation 30 dB. Amplitude unbalance .1 dB. Phase unbalance 3° typical. Temperature range −55°C to +100°C. From $59.95 in small quantities.

EIGHT-WAY 0°



PSC-8 SERIES

Miniature size, .8 inches square. Frequency coverage from 0.5 to 175 MHz. Low insertion loss .7 dB. High isolation 30 dB. Amplitude unbalance .1 dB. Phase unbalance 1° typical. Temperature range −55°C to +100°C. From $59.95 in small quantities.

Mini Circuits Laboratory 837-843 Utica Avenue, Brooklyn, NY 11203 (212) 342-2500

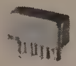
Mini-Circuits Laboratory

DESIGNERS' SELECTION GUIDE

RF TRANSFORMERS

T SERIES

Micro-miniature, plastic case, wideband covering frequency range of .015 MHz to 800 MHz. Impedance levels from 12.5 ohms to 800 ohms. Low insertion loss less than 0.5 dB. Small quantity prices begin at only $2.95! Kit available.



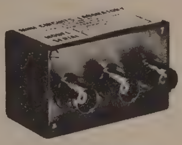
TMO SERIES

Micro-miniature, hermetically sealed metal case. Wideband, covering frequency range of .015 to 800 MHz. Impedance levels from 12.5 to 800 ohms. Low insertion loss less than 0.5 dB. Small quantity prices as low as $4.95. Kit available.

ELECTRONIC ATTENUATORS/SWITCHES

PAS SERIES

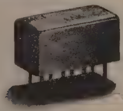
Miniature size. Broad frequency range 1-450 MHz. High on/off ratios, 50 dB. Low insertion loss, 1.5 dB. Ultra-low distortion, intercept point +45 dBm. Small quantity prices start from $27.95.



ZAS SERIES

Cast aluminum case, 2.25 inches long. BNC connectors standard. TNC on request. Broad frequency range 1-450 MHz. High on/off ratios, 50 dB. Low insertion loss, 1.5 dB. Ultra-low distortion, intercept point +45 dBm. Small quantity prices start at $42.95.

DIRECTIONAL COUPLERS



PDC SERIES

Miniature size. Broad frequency range 10 KHz to 1000 MHz. Wide selection of coupling. Low main line loss from 0.1 dB. High directivity to 35 dB. From $9.95 in small quantities.

ZDC SERIES

Cast aluminum case, 2.25 inches long. BNC connectors standard, TNC on request. Broad frequency range 10 KHz to 1000 MHz. Wide selection of coupling. Low main line loss from 0.1 dB. High directivity to 35 dB. From $26.95 in small quantities.

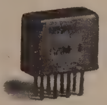
ZMDC SERIES

Cast aluminum case, miniature size 1.5 inches long. SMA (3mm) connectors standard. Broad frequency range 10 KHz to 1000 MHz. Wide selection of coupling. Low main line loss from 0.1 dB. High directivity to 35 dB. From $36.95 in small quantities.

FREQUENCY DOUBLERS

RK SERIES

Miniature size. Wide band .05 to 1000 MHz. Exceptionally good spurious rejection. Low conversion loss, 12 dB. Temperature range from −55°C to +100°C. From $14.95 in small quantities.

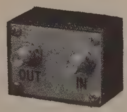


AK SERIES

Micro-miniature size, PC board area only 0.1 sq. inches. Wide band 1-1000 MHz. Exceptionally good spurious rejection. Low conversion loss 13.5 dB. Temperature range from −55°C to +100°C. From $19.95 in small quantities.

GK SERIES

Cast aluminum case, 2.25 inches long. BNC connectors standard, TNC on request. Wide band .05-1000 MHz. Exceptionally good spurious rejection. Low conversion loss 12 dB. Temperature range −55°C to +100°C. From $26.95 in small quantities.



MK SERIES

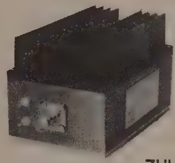
Miniature size, cast aluminum case, 1.5 inches long. SMA (3mm) connectors standard. Wide band .05-1000 MHz. Exceptionally good spurious rejection. Low conversion loss 12 dB. Temperature range −55°C to +100°C. From $34.95 in small quantities.

LIMITERS

PLS SERIES

Miniature size. Frequency coverage from .1 to 150 MHz. Input level +6 dBm to +20 dBM. Output level −1 dBm. Phase variation over range 2° typical. Temperature range −55°C to +100°C. From $14.95 in small quantities.

BROADBAND AMPLIFIERS



ZHL SERIES

High power linear amplifier. +38 dBm two-tone, third order intercept. Wide band, frequency range 2 to 500 MHz. Max. power output greater than 1 watt. Heat sink mounted on unit. Unit price $199.00.

World's largest supplier of double balanced mixers

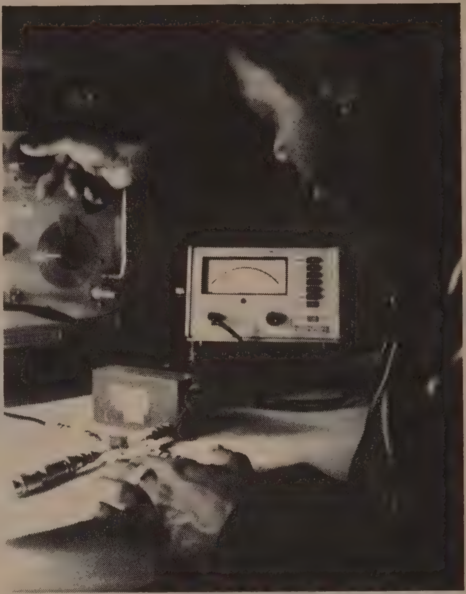
Mini Circuits Laboratory 837-843 Utica Avenue, Brooklyn, NY 11203 (212) 342-2500

Reliability Considerations

It is very important that the mixer should provide reliable service under adverse environmental conditions. The user should also expect satisfactory performance after years of operation. Since these two criteria are somewhat subjective the manufacturer should utilize procedures, techniques, and criterion which will enhance the reliability and quality of the finished product. After manufacturing tens of thousands of double balanced mixers Mini-Circuits Laboratory is confident that we are doing the "right thing".

At Mini-Circuits Laboratory reliability and quality control is one of the most important considerations in the manufacture of our products. Some of the procedures which are incorporated to ensure that every unit shipped has quality built in are as follows:

A. 100% testing of each diode.
B. 100% testing of each unit.
C. 100% inspection of every solder connection.
D. All transformers bonded to the header for protection against severe shock and vibration conditions.



No units are shipped without a thorough 100% test.

Matched diodes are carefully mounted to the header assembly for rugged protection against severe shock and vibration.

Every single solder connection is closely inspected to detect potential flaws.

E. All diodes bonded to the header for protection against severe shock and vibration conditions.

F. Diode power dissipation derated greater than 50%.

G. All Components rated for greater than +125°C operation.

H. All transformer leads double wrapped.

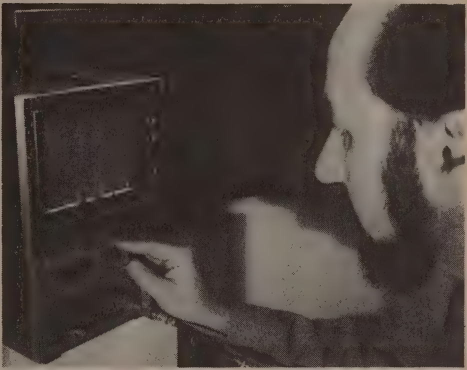
I. Heavy coated wire insulation for Hi-Pot/altitude requirements.

J. Completely encapsulated for protection against mechanical shock and vibration and temperature shock.

K. Permanent case marking of model number, cannot be removed by cleaning agents or ultrasonic baths.

L. Cupro-Nickel case for long lasting finish especially under salt atmosphere conditions.

As a consequence of these considerations Mini-Circuits Laboratory guarantees its products for one full year after shipment. In addition Mini-Circuits guarantees its units will meet the following environmental specifications.



Performance characteristics are checked to assure compliance with data-sheet specs.

Transformer leads are doubly wrapped to eliminate potential flaws.

Environmental Specifications

All MCL components are manufactured under exacting quality assurance and control standards. They will meet or exceed published specifications over the operating temperature range of —54° to +100°C, and after being subjected to any or all of the following physical or environmental tests of MIL STD 202D which are applicable.

Temperature Cycling: —65° to +125°C	102	C
Altitude: 656,000 feet	105	G
Humidity: 90% RH, 65°C	106	
Thermal Shock: —65°C to +125°C	107	B
Seal: less than 10^{-5} Atm. cc/sec.	112	A
Drop: Random, 45 min.	203	
Vibration: 2 to 2,000 cps, 20g, 12 hrs.	204	D
Solder Heat 260°C, 10 sec.	210	B
Solderability: 95% coverage	208	
Terminal Tensile Strength: 4½ lbs., 10 sec.	211	A
Terminal Fatigue: 2 lbs., 3 cycles	211	C
Mechanical Shock: 100g, 6ms	213	I
Solvent Resistance: Alcohol, Trichloroethane, Freon.	215

BI-PHASE MODULATION

DESCRIPTION

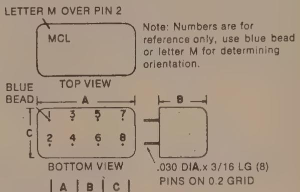
Having a volume of only .128 cu. inches, the SRA series covers a very broad frequency range from 500Hz to 1250MHz. Offered at the lowest prices available in the industry, these rugged units provide low conversion loss, 6 dB, high isolation 40 dB, and exceptional unit to unit matched performance.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their pins oriented on a 0.2 inch grid.

Ruggedness and durability are built into the SRA series. Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally every component is bonded to the header and case with silicone rubber to provide super reliable protection against shock, vibration, and acceleration.

The model SRA-1 has become an industry standard throughout the world and is believed to be the number one volume leader. Used by all branches of the Department of Defense, NASA, FAA, and every major communications company, the SRA-1 has proven to be an industry work horse. Used in over 300 different military contracts, and over a period of years, enable sufficient history to establish the SRA-1 as one of the most reliable mixers obtainable, even when considering high priced models.

High reliability is associated with every SRA series mixer. Every production run is 100% tested and every unit must pass our rigid inspection and high quality standards. Naturally, our 1 year guarantee applies to these units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

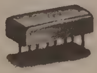
INTRODUCTION TO TAK SERIES
LOW-PROFILE DOUBLE-BALANCED MIXERS

Standard Level
(+7 dBm LO)

TAK Series

TAK-5	.01- 250 MHz	$19.95 (1-4)
TAK-6	.5- 600 MHz	$19.95 (1-4)
TAK-7	2-1000 MHz	$27.95 (1-4)
TAK-9	5-1250 MHz	$29.95 (1-4)

FAST DELIVERY
From stock; one week max.



FEATURES

- MINIATURE SIZE, .067 CU. INCHES
- LOW PROFILE, .21 INCH HEIGHT
- BROAD FREQUENCY RANGE 10KHz - 1250MHz
- HIGH ISOLATION 40 dB
- LOW CONVERSION LOSS 6 dB
- HERMETICALLY SEALED METAL CASE
- PC BOARD MOUNTING
- LOW COST FROM $24.95 IN SMALL QUANTITIES

APPLICATIONS

- FREQUENCY MIXING
- PULSE AND AMPLITUDE MODULATION
- PHASE DETECTION
- CURRENT CONTROLLED ATTENUATION
- FAST SWITCHING
- BI-PHASE MODULATION

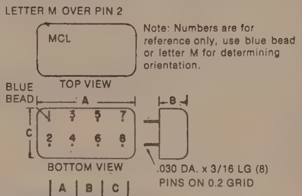
DESCRIPTION

Only 0.2 inches high, the low profile TAK series of double balanced mixers cover a very broad frequency range from 10KHz to 1250MHz. Exhibiting a flat conversion loss, these low profile units are designed to operate with a 50 ohm impedance at all ports. Conversion loss is typically 5.5 dB and isolation is typically greater than 40 dB.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, this low profile unit is only .064 cubic inches. Facilitating your design and production efforts, the TAK series has its 8 pins located on a 0.2 inch grid.

Ruggedness and durability are built-in features. Internal components include well matched hot-carrier diodes and extra wideband transmission line transformers. Hermetically sealed, supported with a silicone rubber for vibration and shock requirements, the TAK series operates from −55° C to +100° C under high humidity conditions.

High reliability is characteristic of the TAK series. Each unit carries with it a one year guarantee by Mini-Circuits.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

INTRODUCTION TO TSM SERIES
MINIATURE DOUBLE-BALANCED MIXERS

LOW-PROFILE

Standard Level
(+7 dBm LO)

TSM Series

TSM-1 1-500 MHz $16.95 (5-24)
TSM-3 0.1-400 MHz $18.95 (5-24)

FAST DELIVERY
From stock, one week max.

FEATURES

- MICRO-MINIATURE SIZE, .025 CU. INCHES
- LOW PROFILE, 0.25 INCH HEIGHT
- PC BOARD AREA ONLY 0.1 SQ. INCHES
- BROAD FREQUENCY RANGE 0.1 - 500MHz
- HIGH ISOLATION 40 dB
- LOW CONVERSION LOSS 5.5 dB
- HERMETICALLY SEALED METAL CASE
- PC BOARD MOUNTING
- LOW COST FROM $16.95 IN SMALL QUANTITIES

APPLICATIONS

- FREQUENCY MIXING
- PULSE AND AMPLITUDE MODULATION
- PHASE DETECTION
- CURRENT CONTROLLED ATTENUATION
- FAST SWITCHING
- BI-PHASE MODULATION

DESCRIPTION

Representing a performance and price breakthrough in micro-miniature low profile double balanced mixers, the TSM series covers the frequency range 100KHz to 500MHz.

Although smaller than mixers presently available, the TSM series offers higher performance of extra wide bandwidth, low conversion loss, and high isolation. These tiny units offer isolation of greater than 55 dB and conversion loss of 5.5 dB! The TSM series performs with a 50 ohm impedance at all ports and has a operating and storage temperature range from −55° C to +100° C.

The TSM units require less PC area than a flat-pack or TO-5 can. For example, consider a 2×2 sq. in. PC board. You can mount 16 standard flat-packs (including room for lead bending), or 23 TO-5 cans (considering the space required for the tab), or 36 Mini-Circuits microminiature TSM's.

Packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.25 in.) the TSM series exhibits a typical noise figure of just 1/2 to 1dB greater than its conversion loss. Its pins are oriented on a 0.1 inch grid for printed circuit board mounting. Only well matched hot-carrier diodes and rugged transmission line transformers are used. Internally, silicone rubber is incorporated as an insulator against any wire shorts and to provide protection against shock, and vibration.

High reliability is characteristic of the TSM series. Each unit carries with it a one year warranty by MCL.

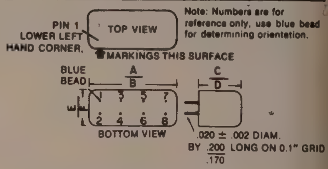
DESCRIPTION

Representing a performance and price breakthrough in micro-miniature double balanced mixers, the SAM series covers the frequency range 100KHz to 1500MHz. Although smaller than mixers presently available, the SAM series offers higher performance of extra wide bandwidth, low conversion loss, and high isolation. These tiny units offer isolation of greater than 55 dB and conversion loss of 5.5 dB. The SAM series performs with a 50 ohm impedance at all ports and has a operating and storage temperature range from −55° C to +100° C.

The SAM units require less PC area than a flat-pack or TO-5 can. For example, consider a 2×2 sq. in. PC board. You can mount 16 standard flat-packs (including room for lead bending), or 23 TO-5 cans (considering the space required for the tab), or 36 Mini-Circuits microminiature SAM's.

Packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.4 in.) the SAM series exhibits a typical noise figure of just 1/2 to 1dB greater than its conversion loss. Its pins are oriented on a 0.1 inch grid for printed circuit board mounting. Only well matched hot-carrier diodes and rugged transmission line transformers are used. Internally, silicone rubber is incorporated as an insulator against any wire shorts and to provide protection against shock, and vibration.

High reliability is characteristic of the SAM series. Each unit carries with it a one year warranty by MCL.



Note: Numbers are for reference only, use blue bead for determining orientation.

APPLICATIONS

FREQUENCY MIXING

PULSE AND AMPLITUDE MODULATION

PHASE DETECTION

CURRENT CONTROLLED ATTENUATION

FAST SWITCHING

BI-PHASE MODULATION

DESCRIPTION

The ZAD series mixers are economically priced while covering the very broad frequency range from 500Hz to 1250MHz. They offer low conversion loss, 6 dB, high isolation 40 dB, and exceptional unit to unit matched performance.

Available with BNC, TNC, or SMA (3 mm) connectors the ZAD series is housed in a die cast aluminum case. These rugged units are double shielded to meet your tough RFI rquirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability.

Ruggedness and durability are built into the ZAD series. Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

The exceptional low cost of the ZAD series is attributable to the breakthrough in production techniques achieved during the manufacture of the widely acclaimed Mini-Circuits SRA series of PC board mounting mixers. Utilizing this technology the ZAD series is offered at a remarkable price of 1/2 to 1/3 the cost of competitive units. The ZAD series provides performance, quality, and low cost.

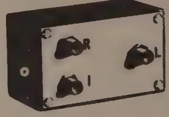
MA Series

MA-1 1-2500 MHz $99.95 (1-9)

FAST DELIVERY
From stock; one week max.



FEATURES

- ULTRA BROADBAND 1 - 2500MHz
- HIGH ISOLATION 40 dB
- LOW CONVERSION LOSS 9 dB
- UNIQUE RUGGED CONSTRUCTION FOR SEVERE MILITARY REQUIREMENTS
- SMA 3mm CONNECTORS
- LOW PRICED $99.95 (1-9 QUANTITY)

APPLICATIONS

- ECM
- TELEMETRY
- TEST INSTRUMENTATION
- WIDE RANGE SIGNAL SOURCES
- TEST RECEIVERS
- LABORATORY PROTOTYPE ASSEMBLY
- SWEEP GENERATORS

DESCRIPTION

Representing a price/performance breakthrough in microwave double balanced mixers, a new 1 to 2500MHz mixer with 9.0dB. conversion loss and isolation of 40dB can now be purchased for as low as $99.95; even in small (1-9) quantities!

Housed in a die cast aluminum case, these rugged units are shielded to meet your tough EMI requirements. The case is finished with a blue baked enamel per Federal Standard 595# 25109 over phosphoric etch per MIL-C-15328A.

The MA-1 operates with a 50 ohm impedance at its ports and a local oscillator power level of +10dBm. Its operating and storage temperature range is from −55° to +100°C. Over the frequency range 1 to 30MHz the operating temperature is −20° to +100°C. Absolute ratings include total input power of 50mW, total peak input current of 40mA.

High reliability is characteristic of the MA-1. Each unit carries with it a one year warranty by MCL. Only well matched hot-carrier diodes and rugged coaxial transmission line transformers are used. Extra special care has been taken to enable these units to be used in environments of severe shock and vibration.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the MA-1 is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology the high performance MA-1 is offered at a remarkable price of ⅓ to ¼ of competitive units.

FEATURES

- MINIATURE SIZE, .128 CU. INCHES
- LINEAR OPERATION UP TO +10 dBm INPUT
- BROAD FREQUENCY RANGE 50KHz -1000 MHz
- HIGH ISOLATION 40 dB
- LOW CONVERSION LOSS 6 dB
- HERMETICALLY SEALED METAL CASE
- PC BOARD MOUNTING
- LOW COST FROM $15.95 IN SMALL QUANTITIES

APPLICATIONS

- FREQUENCY MIXING
- PULSE AND AMPLITUDE MODULATION
- PHASE DETECTION
- CURRENT CONTROLLED ATTENUATION
- FAST SWITCHING
- BI-PHASE MODULATION

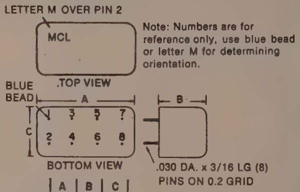
DESCRIPTION

Having only 0.1 cu. inches, the high level SRA-H series covers a broad frequency range from 50KHz to 1000MHz. Designed to solve severe intermodulation distortion problems, the SRA-H series offers linear operation up to +10 dBm signal input at only 1 dB of compression. Reducing all higher order signal harmonic IMD, the SRA-H series provides a conversion loss of typically 6 dB and isolation of greater than 40 dB.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, this tiny unit has its 8 pins located on a 0.2 inch grid.

Ruggedness and durability are built-in features. Internal components include well matched hot-carrier diodes and very broad band, low distortion transformers. Supported with silicone rubber, the SRA-H series withstands high shock, vibration, and acceleration environments.

Priced at 1/2 to 1/3 the cost of competitive units the SRA-H series incorporates the high reliability associated with every Mini-Circuits mixer. Our standard 1 year guarantee applies to these units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

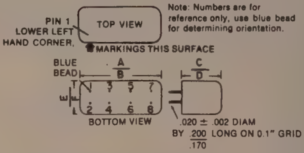
DESCRIPTION

Representing a performance and price breakthrough in micro-miniature double balanced mixers, the SAM-H series covers the frequency range 100KHz to 1000MHz. Although smaller than mixers presently available, the SAM-H series offers higher performance of extra wide bandwidth, low conversion loss, and high isolation. These tiny units offer isolation of greater than 55 dB and conversion loss of 6.0 dB. The SAM-H series performs with a 50 ohm impedance at all ports and has a operating and storage temperature range from −55° C to +100° C.

The SAM-H units require less PC area than a flat-pack or TO-5 can. For example, consider a 2×2 sq. in. PC board. You can mount 16 standard flat-packs (including room for lead bending), or 23 TO-5 cans (considering the space required for the tab), or 36 Mini-Circuits microminiature SAM's.

Packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.4 in.) the SAM-H series exhibits a typical noise figure of just 1/2 to 1dB greater than its conversion loss. Its pins are oriented on a 0.1 inch grid for printed circuit board mounting. Only well matched hot-carrier diodes and rugged transmission line transformers are used. Internally, silicone rubber is incorporated as an insulator against any wire shorts and to provide protection against shock, and vibration.

High reliability is characteristic of the SAM-H series. Each unit carries with it a one year warranty by MCL.



Note: Numbers are for reference only, use blue bead for determining orientation.

DESCRIPTION

The ZAD-H series mixers cover a broad frequency range from 50KHz to 1000 MHz Solving severe intermodulation distortion problems, the ZAD-H series offers linear operation up to +10 dBm signal input at only 1 dB of compression. Reducing all higher order signal harmonic IMD, the ZAD-H series provides a conversion loss of typically 6 dB and isolation of greater than 40 dB.

Available with BNC, or TNC coaxial connectors, the ZAD-H series is housed in a die cast aluminum case. These rugged units are double shielded to meet your tough RFI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability.

Ruggedness and durability are built into the ZAD-H series. Only well matched hot-carrier diodes and ruggedly constructed low distortion transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

Priced at 1/2 to 1/3 the cost of competitive units the ZAD-H series incorporates the high reliability associated with every Mini-Circuits unit. The ZAD-H series offers performance, quality, and low cost so that you can expect value with every purchase.

For connector version see ZAY *series*

FEATURES

- MINIATURE SIZE, .128 CUBIC INCHES
- LINEAR OPERATION UP TO +15 dBm INPUT
- BROAD FREQUENCY RANGE 70KHz - 1000MHz
- HIGH ISOLATION 40 dB
- LOW CONVERSION LOSS 6 dB
- HERMETICALLY SEALED METAL CASE
- PC BOARD MOUNTING
- LOW COST FROM $31.95 IN SMALL QUANTITIES

APPLICATIONS

- FREQUENCY MIXING
- PULSE AND AMPLITUDE MODULATION
- PHASE DETECTION
- CURRENT CONTROLLED ATTENUATION
- FAST SWITCHING
- BI-PHASE MODULATION

DESCRIPTION

Housed in a volume of only 0.1 cu. inches and requiring a PC board area of only .32 sq. inches makes the RAY series the smallest packaged mixers for very high level operation. The RAY series covers a broad frequency range from 70 KHz to 1000 MHz.

Designed to solve very severe intermodulation distortion problems, the RAY series offers linear operation up to +15 dBm signal input at only 1 dB of compression. Reducing all higher order IMD, the RAY series provides a conversion loss of typically 6 dB and isolation of greater than 40 dB.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, this tiny unit has its 8 pins located on a 0.2 inch grid.

Ruggedness and durability are built-in features. Internal components include well matched hot-carrier diodes and very broad band, low distortion transformers. Supported with silicone rubber, the RAY series withstands high shock, vibration, and acceleration environments.

Costing 1/3 to 1/4 the price of competitive units, the RAY series offers the high reliability associated with every Mini-Circuits mixer. Our standard 1 year guarantee applies to these units.

BI-PHASE MODULATION

DESCRIPTION

The ZAY/ZMY series of mixers cover a broad frequency range from 70 KHz to 1000MHz. Solving very severe intermodulation distortion problems, the ZAY/ZMY series offers linear operation up to + 15 dBb signal input at only 1 dB of compression. Reducing all higher order IMD, the ZAY/ZMY series provides a conversión loss of typically 6 dB and isolation of greater than 40 dB.

Available with BNC, TNC, or SMA (3mm) connectors, the ZAY/ZMY series is housed in a die cast aluminum case. These rugged units are double shielded to meet your tough RFI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability.

Ruggedness and durability are built into the ZAY/ZMY series. Only well matched hot-carrier diodes and ruggedly constructed low distortion transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

Priced at ⅓ to ¼ the cost of competitive units the ZAY/ZMY series incorporates the high reliability associated with every Mini-Circuits unit. The ZAY/ZMY series offers performance, quality, and low cost so that you can expect value with every purchase.

- DELIVERY ONE WEEK
- LOW PRICED $49.95 (1-9 QUANTITY)

APPLICATIONS

- FREQUENCY MIXING
- PULSE AND AMPLITUDE MODULATION
- PHASE DETECTION
- CURRENT CONTROLLED ATTENUATION
- FAST SWITCHING

DESCRIPTION

The ZMA series mixers are very economically priced while covering the broad frequency range from 1000 MHz to 3000 MHz They offer low conversion loss, 7 dB, and high LO-IF isolation 50 dB, over most of its frequency range.

Available with SMA (3 mm) connectors the ZMA series is housed in a die cast aluminum case. These rugged units are shielded to meet your tough RFI rquirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability.

Ruggedness and durability are built into the ZMA series. Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration.

The exceptional low cost of the ZMA series is attributable to the breakthrough in production techniques achieved during the manufacture of the widely acclaimed Mini-Circuits SRA series of PC board mounting mixers. Utilizing this technology the ZMA series is offered at a remarkable price of 1/2 to 1/3 the cost of competitive units. The ZMA series provides performance, quality, and low cost.

FEATURES

- BROAD FREQUENCY RANGE, 10 KHz-1000 MHz
- WIDE SELECTION OF COUPLING
- LOW MAIN LINE LOSS FROM 0.1 dB
- HIGH DIRECTIVITY TO 35 dB
- HERMETICALLY SEALED METAL CASE
- PC BOARD MOUNTING
- LOW COST FROM $9.95 IN SMALL QUANTITIES

APPLICATIONS

- MEASURE INCIDENT AND REFLECTED POWER TO DETERMINE VSWR
- SIGNAL SAMPLING
- S PARAMETER MEASUREMENT
- SIGNAL INJECTION
- SIGNAL GENERATOR/OSCILLATOR LEVELING
- POWER FLOW MONITORING

DESCRIPTION

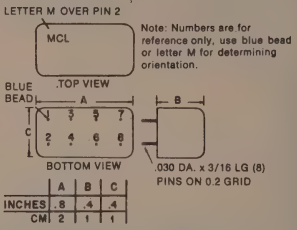
The PDC series directional couplers are economically priced while covering the frequency range from 10 kHz to 1000 MHz. They offer main-line loss as low as 0.1 dB and high directivity of up to 35 dB. A wide selection of coupling ratios are available and exceptional unit to unit matched performance is standard.

Having a volume of only 0.128 cu. inches, the PDC series is offered at the lowest prices available in the industry.

Packaged within an rfi shielded metal enclosure and hermetically-sealed header, these high performance units have their pins oriented on a 0.2 inch grid. Ruggedness and durability are built into the PDC series. Only well matched and ruggedly constructed transmission line transformers are used. Internally every component is bonded to the header and case with silicone rubber to provide super reliable protection against shock vibration and acceleration.

The PDC series uses the same construction technology as our SRA double-balanced mixer. This unit has become an industry standard throughout the world and is believed to be the number one volume leader. Used by all branches of the Department of Defense, NASA, FAA and every major communications company, the SRA has proven to be an industry work horse. Used in over 250 different military contracts, and over a period of years, enable sufficient history to establish SRA as one of the most reliable mixers obtainable, even when considering high priced models. The PDC series is expected to provide the same kind of results.

High reliability is associated with every PDC series directional coupler. Every production run is 100% tested and every unit must pass our rigid inspection and high quality standards. Naturally, our one year guarantee applies to these units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

Mini-Circuits Laboratory MCL

INTRODUCTION TO ZDC ZMDC SERIES DIRECTIONAL COUPLERS

FEATURES

- BROAD FREQUENCY RANGE, 10 kHz - 1000 MHz
- WIDE SELECTION OF COUPLING
- LOW MAIN LINE LOSS FROM 0.1 dB
- HIGH DIRECTIVITY TO 35 dB
- DIE-CAST ALUMINUM CASE
- LOW COST FROM $26.95 IN SMALL QUANTITIES

APPLICATIONS

- MEASURE INCIDENT AND REFLECTED POWER TO DETERMINE VSWR
- SIGNAL SAMPLING
- S PARAMETER MEASUREMENT
- SIGNAL INJECTION
- SIGNAL GENERATOR/OSCILLATOR LEVELING
- POWER FLOW MONITORING

DESCRIPTION

The ZDC/ZMDC series directional couplers are economically priced while covering the frequency range from 10 kHz to 1000 MHz. They offer main-line loss as low as 0.1 dB and high directivity of up to 35 dB. A wide selection of coupling ratios are available and exceptional unit to unit matched performance is standard.

Available with BNC, TNC, or SMA connectors, the ZDC/ZMDC series is housed in a die-cast aluminum case. The case is finished with a blue-baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit 100% tested and inspected under strict MCL quality-control standards to insure superior electrical performance and reliability.

Ruggedness and durability are built into the ZDC/ZMDC series. Only well matched and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration.

The exceptional low cost of the ZDC/ZMDC series is attributable to the breakthrough in production techniques achieved during the manufacture of the widely acclaimed Mini-Circuits SRA series of PC board mounting mixers. Utilizing this technology, the ZDC/ZMDC series is offered at a remarkable price of ⅓ to ⅕ the cost of competitive units. The ZDC/ZMDC series provides performance, quality and low cost.

FEATURES

MINIATURE SIZE, .128 CU. INCHES

EXTRA WIDE BAND, 2KHz - 400MHz

EXCEPTIONALLY GOOD BALANCE

LOW INSERTION LOSS

HIGH ISOLATION

RFI SHIELDED

HERMETICALLY SEALED METAL CASE

LOW COST FROM $9.95
IN SMALL QUANTITIES

APPLICATIONS

ADD OR SUBTRACT SIGNALS VECTORIALLY

OBTAIN MULTI IN-PHASE OUTPUT SIGNALS PROPORTIONAL TO THE LEVEL OF A COMMON INPUT SIGNAL

SPLIT AN INPUT SIGNAL INTO MULTI-OUTPUTS

COMBINE SIGNALS FROM DIFFERENT SOURCES TO OBTAIN A SINGLE PORT OUTPUT

PROVIDE CAPABILITY TO OBTAIN RF LOGIC ARRANGEMENTS

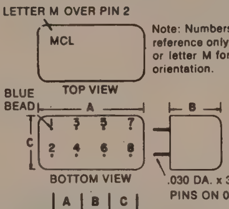
DESCRIPTION

The model PSC-2 2-way power splitter/combiner is a high performance broad band hybrid junction. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the two output (1 and 2) ports. Similarly, signals fed into ports 1 and 2 are vectorially summed at the output S port.

The PSC-2 features exceptionally good amplitude and phase balance between the signals at the 2 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

The PSC-2 is ruggedly constructed to provide reliable service under severe environmental conditions. Internally, every component is bonded to the header for added strength to protect against shock and vibration. This hermetically sealed unit performs well under high relative humidity conditions and over temperature extremes from −55°C to +100°C.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the PSC-2 is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology, the high performance PSC-2 is offered at a remarkable price of ½ to ⅓ of competitive units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

PROVIDE CAPABILITY TO OBTAIN RF LOGIC ARRANGEMENTS

DESCRIPTION

The model ZSC-2/ZMSC-2 2-way power splitter/combiner is a high performance broad band hybrid junction. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the two output (1 and 2) ports. Similarly, signals fed into ports 1 and 2 are vectorially summed at the output S port.

The ZSC-2/ZMSC-2 features exceptionally good amplitude and phase balance between the signals at the 2 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

Housed in a die cast aluminum case, these rugged units are double shielded to meet your tough EMI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the ZSC-2/ZMSC-2 is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology, the high performance ZSC-2/ZMSC-2 is offered at a remarkable price of ½ to ⅓ of competitive units.

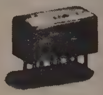
INTRODUCTION TO PSC J-2 SERIES
POWER SPLITTER-COMBINERS

Two-Way
(OUT OF PHASE 180°)

	PSC J-2	**Series**
PSCJ-2-I	I-200 MHz	$19.95 (5-49)

FAST DELIVERY
From stock, one week max.



For connector version see ZSCJ-2series

FEATURES

MINIATURE SIZE, .128 CU. INCHES

WIDE BAND, I-200 MHz

EXCEPTIONALLY GOOD BALANCE

LOW INSERTION LOSS

HIGH ISOLATION

RFI SHIELDED

HERMETICALLY SEALED METAL CASE

LOW COST FROM $19.95
IN SMALL QUANTITIES

APPLICATIONS

ADD OR SUBTRACT SIGNALS VECTORIALLY

OBTAIN MULTI 180° OUTPUT SIGNALS PROPORTIONAL TO THE LEVEL OF A COMMON INPUT SIGNAL

SPLIT AN INPUT SIGNAL INTO MULTI-OUTPUTS

COMBINE SIGNALS FROM DIFFERENT SOURCES TO OBTAIN A SINGLE PORT OUTPUT

PROVIDE CAPABILITY TO OBTAIN RF LOGIC ARRANGEMENTS

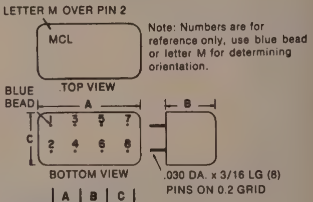
DESCRIPTION

The model PSCJ-2 2-way power splitter/combiner is a high performance broad band hybrid junction. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, 180° out of phase to the two output (1 and 2) ports. Similarly, signals fed into ports 1 and 2 are vectorially summed at the output S port.

The PSCJ-2 features exceptionally good amplitude and 180° phase between the signals at the 2 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

The PSCJ-2 is ruggedly constructed to provide reliable service under severe environmental conditions. Internally, every component is bonded to the header for added strength to protect against shock and vibration. This hermetically sealed unit performs well under high relative humidity conditions and over temperature extremes from −55°C to +100°C.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the PSCJ-2 is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology, the high performance PSCJ-2 is offered at a remarkable price of ⅓ to ⅙ of competitive units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

SPLIT AN INPUT SIGNAL INTO MULTI-OUTPUTS

COMBINE SIGNALS FROM DIFFERENT SOURCES TO OBTAIN A SINGLE PORT OUTPUT

PROVIDE CAPABILITY TO OBTAIN RF LOGIC ARRANGEMENTS

DESCRIPTION

The ZSC-3/ZMSC-3 series 3-way power splitter/combiner is a high performance broad band hybrid junction. internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the three output (1, 2, and 3) ports. Similarly signals fed into ports 1, 2, and 3 are vectorially summed at the output S port.

The ZSC-3/ZMSC-3 series features exceptionally good amplitude and phase balance between the signals at the 3 output ports. Typically over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within 0.5 dB.

Ruggedness and durability are built into the ZSC-3/ZMSC-3 series. Internally every component is bonded with silicone rubber to provide protection against shock, vibration, and acceleration. Available with BNC, TNC, or SMA (3mm) connectors, the ZSC-3/ZMSC-3 series is housed in a die cast aluminimum case. The case finish is a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the ZSC-3/ZMSC-3 series is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology, the high performance ZSC-3/ZMSC-3 series is offered at a remarkable price of ½ to ⅓ the cost of competitive units.

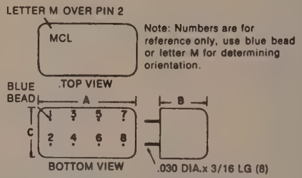
DESCRIPTION

The model PSC-4 4-way power divider/combiner is a high performance broad band hybrid junction. Internally, terminations and transformers are provided to ensure a well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in power, to the four output (1, 2, 3, and 4) ports. Similarly, signals fed into ports 1, 2, 3 and 4 are vectorially summed at the output S port.

The PSC-4 features exceptionally good amplitude and phase balance between the signals at the 4 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

The PSC-4 is ruggedly constructed to provide reliable service under severe environmental conditions. Internally, every component is bonded to the header for added strength to protect against shock and vibration. This hermetically sealed unit performs well under high relative humidity conditions and over temperature extremes from −55° C to +100° C.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the PSC-4 is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology, the high performance PSC-4 is offered at a remarkable price of ½ to ⅓ of competitive units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

INTRODUCTION TO ZSC·4 ZMSC·4 SERIES POWER SPLITTER-COMBINERS

Four-Way
(In Phase 0°)

FEATURES

BROAD FREQUENCY RANGE
2 KHz - 250 MHz

EXCEPTIONALLY GOOD BALANCE

LOW INSERTION LOSS

HIGH ISOLATION

DIE-CAST ALUMINUM CASE

LOW COST FROM $38.95
IN SMALL QUANTITIES

APPLICATIONS

ADD OR SUBTRACT SIGNALS VECTORIALLY

OBTAIN MULTI IN-PHASE OUTPUT SIGNALS PROPORTIONAL TO THE LEVEL OF A COMMON INPUT SIGNAL

SPLIT AN INPUT SIGNAL INTO MULTI-OUTPUTS

COMBINE SIGNALS FROM DIFFERENT SOURCES TO OBTAIN A SINGLE PORT OUTPUT

PROVIDE CAPABILITY TO OBTAIN RF LOGIC ARRANGEMENTS

DESCRIPTION

The model ZSC-4/ZMSC-4 4-way power splitter/combiner is a high performance broad band hybrid junction. Internally, terminations and transformers are provided to ensure well matched 50 ohm impedance at all ports. Signals fed into the input S port are equally divided, in phase, to the four output (1, 2, 3 and 4) ports. Similarly, signals fed into ports 1, 2, 3 and 4 are vectorially summed at the S port.

The ZSC-4/ZMSC-4 features exceptionally good amplitude and phase balance between the signals at the 4 output ports. Typically, over most of the frequency range, the phase balance is within 1 degree and the amplitude balance is within .05 dB.

Housed in a die cast aluminum case, these rugged units are double shielded to meet your tough EMI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability. The exceptionally low cost of the ZSC-4/ZMSC-4 is attributable to the breakthrough in production techniques achieved by MCL during the manufacture of its high performance low price double balanced mixers. Utilizing this technology, the high performance ZSC-4/ZMSC-4 is offered at a remarkable price of ½ to ⅓ of competitive units.

FEATURES

MINIATURE SIZE, .128 CU. INCHES

WIDE BAND, 0.5 MHz -1000MHz

EXCEPTIONALLY GOOD SPURIOUS REJECTION

LOW CONVERSION LOSS, 12 dB

RFI SHIELDED

HERMETICALLY SEALED METAL CASE

LOW COST FROM $14.95 IN SMALL QUANTITIES

APPLICATIONS

WIDEBAND FREQUENCY MULTIPLIER CHAINS

LOW SPURIOUS FREQUENCY MULTIPLIER CHAINS

FM, PM MODULATION CHAINS

DOUBLE FREQUENCY RANGE OF SIGNAL GENERATORS

DESCRIPTION

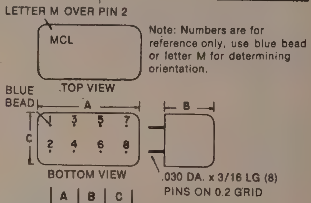
Having a volume of only .128 cu. inches, the RK series covers a very broad frequency range from 50KHz to 1000MHz. Offered at the lowest prices available in the industry, these rugged units provide low conversion loss, 12.5 dB, high spurious rejection 40 dB, and exceptional unit to unit matched performance.

The RK series offers a new degree of freedom in designing frequency multiplier chains. It's many octave band width, and excellent rejection of fundamental and third harmonics enable a significant reduction in filter requirements. In addition, it operates with 50 ohm impedances at its input and output ports and is not very sensitive to input power. It performs well from 0 dBm to +15 dBm input.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their pins oriented on a 0.2 inch grid.

Ruggedness and durability are built into the RK series. Only well matched hot-carrier diodes and ruggedly constructed transmission line transformers are used. Internally every component is bonded to the header and case with silicone rubber to provide super reliable protection against shock, vibration, and acceleration.

High reliability is associated with every RK unit. Every production run is 100% tested and every unit must pass our rigid inspection and high quality standards. Naturally, our 1 year guarantee applies to these units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

FEATURES

- MICRO-MINIATURE SIZE, .04 CU. INCHES
- PC BOARD AREA ONLY 0.1 SQ. INCHES
- WIDE BAND, 1-1000MHz
- EXCEPTIONALLY GOOD SPURIOUS REJECTION
- LOW CONVERSION LOSS 13.5 dB
- RFI SHIELDED
- HERMETICALLY SEALED METAL CASE
- PC BOARD MOUNTING
- LOW COST FROM $19.95 IN SMALL QUANTITIES

APPLICATIONS

- WIDEBAND FREQUENCY MULTIPLIER CHAINS
- LOW SPURIOUS FREQUENCY MULTIPLIER CHAINS
- FM, PM MODULATION CHAINS
- DOUBLE FREQUENCY RANGE OF SIGNAL GENERATORS

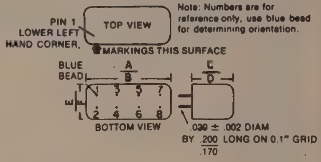
DESCRIPTION

Representing a performance and price breakthrough in micro-miniature frequency doublers the AK series covers the frequency range 1 to 1000MHz.
The AK series offers high performance of extra wide bandwidth, low conversion loss, and high spurious rejection. These tiny units offer fundamental rejection of greater than 25 dB and conversion loss of 12.5 dB! The AK series performs with a 50 ohm impedance at all ports and has a operating and storage temperature range from −55° C to +100° C.

The AK units require less PC area than a flat-pack or TO-5 can. For example, consider a 2×2 sq. in. PC board. You can mount 16 standard flat-packs (including room for lead bending), or 23 TO-5 cans (considering the space required for the tab), or 36 Mini-Circuits microminiature AK's

The AK units are packaged within an EMI shielded metal enclosure and hermetically sealed header (enclosure is 0.5 by 0.2 by 0.4 in.) Its pins are oriented on a 0.1 inch grid for printed circuit board mounting. Only well matched hot-carrier diodes and rugged transmission line transformers are used. Internally, silicone rubber is incorporated as an insulator against any wire shorts and to provide protection against shock, and vibration.

High reliability is characteristic of the AK series. Each unit carries with it a one year warranty by MCL.



Note: Numbers are for reference only, use blue bead for determining orientation.

FEATURES

MINIATURE SIZE, .128 CU. INCHES

BROAD FREQUENCY RANGE
1 - 450 MHz

HIGH ON/OFF RATIOS, 50 dB

LOW INSERTION LOSS, 1.5 dB

ULTRA-LOW DISTORTION, INTERCEPT POINT +45 dBm

HERMETICALLY SEALED METAL CASE

PC BOARD MOUNTING

LOW COST FROM $27.95
IN SMALL QUANTITIES

APPLICATIONS

ELECTRONIC SWITCHING

CURRENT CONTROLLED ATTENUATION

BI-PHASE MODULATION

POWER LEVELING

DESCRIPTION

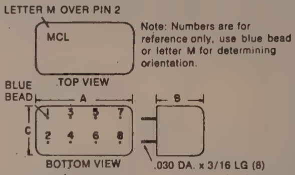
The PAS series of electronic attenuators enable attenuation control of AF signals with a maximum of only 20 mA of control current. Due to the specific properties of the PAS attenuators, for a single frequency input all harmonics even and odd order, are virtually eliminated at the output.
As a consequence, the PAS intercept point is greater than +45 dBm.

Having a volume of only .128 cu. inches, the PAS series covers a very broad frequency range from 1-450 MHz Offered at the lowest prices available in the industry, these rugged units provide low insertion loss, 1.5dB, high isolation 50 dB, and exceptional unit to unit matched performance.

Packaged within an RFI shielded metal enclosure and hermetically sealed header, these high performance units have their pins oriented on a 0.2 inch grid.

Ruggedness and durability are built into the PAS series. Only well matched diodes and ruggedly constructed transmission line transformers are used. Internally every component is bonded to the header and case with silicone rubber to provide super reliable protection against shock, vibration, and acceleration.

High reliability is associated with every PAS series attenuators. Every production run is 100% tested and every unit must pass our rigid inspection and high quality standards. Naturally, our 1 year guarantee applies to these units.



Note: Numbers are for reference only, use blue bead or letter M for determining orientation.

DESCRIPTION

The ZAS/ZMAS series of electronic attenuators enable attenuation control of RF signals with a maximum of only 20 mA of control current. Due to the specific properties of the ZAS/ZMAS attenuators, for a single frequency input all harmonics even and odd order, are virtually eliminated at the output. As a consequence, the ZAS/ZMAS intercept point is greater than +45 dBm.

The ZAS/ZMAS series mixers are economically priced while covering the very broad frequency range from 1 - 450 MHz. They offer low insertion loss, 1.5 dB, high isolation 50 dB, and exceptional unit to unit matched performance.

Available with BNC, TNC, or SMA (3 mm) connectors the ZAS/ZMAS series is housed in a die cast aluminum case. These rugged units are double shielded to meet your tough RFI requirements. The case is finished with a blue baked enamel per Federal Standard 595 #25109 over phosphoric etch per MIL-C-15328A.

Every unit is 100% tested and inspected under strict MCL quality control standards to ensure superior electrical performance and reliability.

Ruggedness and durability are built into the ZAS/ZMAS series. Only well matched diodes and ruggedly constructed transmission line transformers are used. Internally, every component is bonded with silicone rubber to provide protection against shock, vibration and acceleration.

SPECIAL UNITS

In addition to our standard lines, North Hills custom designs to specific requirements. Examples of these include:

- Active unity – or high-gain power splitters, adders and combiners.
- High power dividers.
- Power dividers for video applications with response down to 1 kHz.
- Non-standard impedances.

COMPONENTS & SUBSYSTEMS

TRANSISTOR AMPLIFIERS

SCI components group produces several series of low-noise, cost effective solid state amplifiers from 0.5 MHz to 4 GHz. Available in a variety of mechanical packages, SCI transistor amplifiers are designed to deliver state-of-the-art performance with high reliability under adverse operating conditions.

CUSTOM AMPLIFIERS

SCI components group invites requests to modify standard series amplifiers or to design new amplifiers to meet special requirements. Our broad experience in all areas of amplifier design and fabrication enable SCI to perform these services with short turn around time at a modest increase in cost over our standard products.

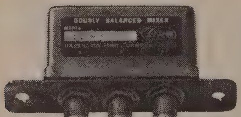
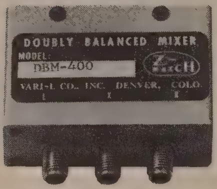
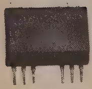
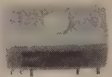
MODEL:
VARI-L CO., INC. DENVER, COLO.









THE DOUBLY BALANCED MIXERS

Low Noise Figure
Flat Conversion Efficiency
Low Intermodulation Products
Wide Bandwidth
High Isolation
Low Insertion Noise

Mixing two signals to produce a sum and a difference frequency requires a square-law device, and a diode has long been used for this purpose. Because it departs from true square-law behavior over much of its range, it produces products other than those desired, and it also feeds energy through from one port to another. The balanced mixer was developed to overcome these shortcomings, and its advantages are so numerous that it has become a standard component in most high-performance receivers. It is also valuable in the design of such high-reliability items as aircraft navigational equipment, microwave links, spectrum analyzers, etc. It would be out of the question to meet modern military equipment specifications, particularly as regards oscillator radiation from the antenna and intermodulation distortion, without the doubly balanced mixer. These advantages would also be desirable in equipment such as television receivers, CATV distribution circuits, and amateur communications receivers, but high cost has been a deterrent to using balanced mixers in such service. In recent months Vari-L Co., Inc. has been making strides toward a marked cost reduction in the device, and we invite inquiries from set designers who might like advance information.

NEW HIGH LEVEL DOUBLY BALANCED MIXERS

Recently balanced mixers have been developed containing networks which greatly improve their ability to handle, linearly, high RF signal levels. These designs have lower harmonic spurious outputs as well as improved odd order intermodulation production. Other characteristics parallel the low level types except that higher local oscillator drive levels are recommended.

APPLICATIONS:

MODULATOR

Because one port is coupled to DC, the doubly balanced mixer may be used as a pulse modulator with unlimited pulse duration. RF input is made to port L, modulation to port X, and the output from port R. Total current should not exceed 50 ma. The modulator has a 35 dB on/off ratio at f_{max} (greater at the lower frequencies) and a turn-on/turn-off time of less than one nanosecond. As an AM modulator, with the X port used for the modulation-signal input, the mixer has excellent carrier rejection at high frequencies. The carrier may be reinserted after the modulator, or will feed through the mixer in controlled amounts if a DC bias (suitably isolated from the modulation source) is introduced into the X port.

CURRENT-CONTROLLED ATTENUATOR

By the use of a DC bias as described above, the mixer can function as a current/voltage controlled attenuator. With zero current into the X port the attenuation of an RF signal of frequency up to the specified f_{max} will be at least 35 dB, reducing to approximately 3 dB when the bias current is increased to 10 ma. Response time is less than one nanosecond. The signal is introduced to the R port and the output taken from the L port.

PHASE DETECTOR

Because the X port is DC coupled, it is possible to extract a DC voltage as a function of the phase difference between two signals. Minimal 1/f noise is introduced, because of the inherent low-noise quality of the diodes, and their superior balance makes a DC adjustment of the phase detector unnecessary. The DC output is approximately 0 VDC when the L and R port signal phase relationship is $\phi = 90°$, and approximately ±.4 VDC for $\phi = 0$ or 180° phase conditions.

CONSTRUCTION

Z-match mixers are packaged in several case styles allowing the design engineer maximum layout flexibility. Most types are encapsulated to withstand severe environments and handling. High-rel screened diodes are employed throughout, as well as approved design tested materials. Write factory sales for appropriate bulletin.

Figures 8 and 9 are performance curves which are useful in selecting a mixer for a given application.

PORT IDENTIFICATION: L: LO PORT; R: RF PORT; X: IF PORT. All measurements made in a 50 ohm system with LO power of +7 dBm (5 mW). MAX. input power (total: 50 mW. Rated conv. loss and LO-RF figures maintained over a range from −55 to +100°C. Notes for models DBM-400 and DBM-400A: 1. Conversion loss figures apply to RF and/or LO frequencies in the ranges shown and an IF output frequency of 1.0 GHz (750 MHz for DBM-400A) or lower. The X port response extends to 1.5 GHz (1.0 GHz for DBM-400A) with approx. 1 dB increase in conversion loss. 2. (DBM-400 only) for UP conversion with IF frequencies above 1.5 GHz, interchange R and X ports. (R port is now IF output.) Apply the lower frequencies (below 1.5 GHz) to the X port.

* Type (1) High Level — Low Intermodulation Production

FIGURE 12
TYPICAL MID-BAND HARMONIC INTERMODULATION PRODUCT ATTENUATION

Figures to the left are for Type 1 mixers, and figures to the right (in parentheses) are for Type 2. Values shown in the table are obtained with clean, filtered input signals to the mixer. Suppression values given indicate the product amplitude in dB below the $f_L \pm F_R$ output level, using an f_R level for Type 1 mixers of 0 dBm and for Type 2 mixers of −10 dBm. The LO drive level is as shown in Figure 9, Page 2•1392. This table should be treated as design guide only; values given are normally within 10% of actual performance for models listed for service below 1 GHz and within 20% for models designed to operate above 1 GHz.

QH series devices are four port quadrature hybrids capable of supplying equal amplitude, isolated quadrature outputs (90°) of an input signal.

A signal applied to any port couples equally (3dB) to the two adjacent ports. The opposite port remains isolated.

Conversely, the QH series hybrid can be used to obtain the vector sum of the quadrature components of two signals.

Z-MATCH

WIDE BAND HYBRID POWER COMBINERS/DIVIDERS (CONT.)

180° HYBRIDS

In all 180° hybrid designs ports A and B are mutually isolated and ports C and D are mutually isolated.

As a power combiner, two signals fed into port C and D yield their vector sum at port B and their vector difference at port A.

A signal fed into port B divides into two equal amplitude, equal phase, isolated output signals at port C and D. A signal fed into port A divides into equal amplitude, 180° out of phase, isolated signals at port C and D.

Vari-L hybrid models include both impedance transforming and non-impedance transforming designs. In the impedance transforming designs ports A and B are 50 ohm impedance and port C and D are 100 ohm impedance. (See Figure A.) In non-impedance transforming designs all four ports are 50 ohm impedance.

WIDE BAND HYBRID POWER COMBINERS/DIVIDERS (CONT.)

IN-PHASE HYBRIDS

A two-way in-phase hybrid power combiner/divider is a 180° hybrid power combiner/divider with the difference port (A) internally terminated.

As a two-way power divider, a signal fed into the input port yields two in-phase output signals 3dB down from the input power.

As a two-way power combiner, signals applied to the output ports yield a vector sum at the input port.

Multi-way binary power combiners/dividers are realized by cascading combinations of the basic two-way device. The power division ratio of the multi-way combiner/divider is 1/n.

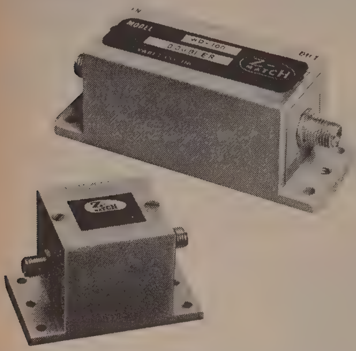
WIDE BAND FREQUENCY DOUBLERS



MODEL
WD-100
DOUBLER
VARI-L CO. INC.
Z-MATCH
OUT
Z-MATCH

Models WD-100, 101 and 102 were developed as components of laboratory equipment to double the frequency of high-level sweep generators, thus extending their range of usefulness. Since the output of the doubler is of relatively high level, the signal obtained is comparable to that of an expensive BWO unit, and a set-up can be made with existing equipment and appreciable savings are effected. The units, being quite small and compact, are often used as part of the local oscillator source for receivers, so they are recommended both as components of larger equipment and as laboratory test devices. The doublers are housed in extruded aluminum cases and are fitted with 3.6 mm. input and output connectors and have 50 ohm input and output impedances. The circuit employs a custom-designed Z-Match input transformer and carefully matched Schottky barrier diodes. The output circuit (Model WD-100 only) is isolated for DC by a special chip capacitor. The circuit elements and supporting structure are encapsulated in high-temperature polyurethane foam. Full electrical specifications are listed in the table below. Operating temperature range is −55 to +100°C. Contact factory sales for appropriate bulletin.

(1) Fundamental feedthrough component at the output when a sine wave producing ±20 mA is used to switch the unit.
(2) Typically low repetition rate switching will produce very little feedthrough. For example, switching noise power at the output is —100 dBm maximum per 100 MHz of bandwidth when driven with a 3 KHz square wave, $T_r = T_f = .5\ \mu sec$ producing ±20 mA control current.

RELIABLE FIXED COMPOSITION RESISTORS

Airco Electronics offers a complete line of ¼, ½, 1 and 2 watt fixed composition resistors that meet or exceed all requirements of Military Specification MIL-R-11 and EIA Standard RS-172. Resistors to Established Reliability Specification MIL-R-39008 available in styles RCR 07, RCR 20 and RCR 32. Hi-Rel resistors for Military Space applications available. Integration of the resistor core and insulating shell during molding provides tight reliable resistor lead anchorage. 100% pure tin lead coating maintains superior soldering characteristics even after extended storage. An industrial grade ½ w. resistor available in standard resistance values and tolerances. Our composition resistors are available for all applications.

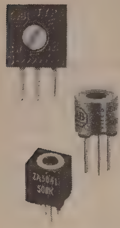
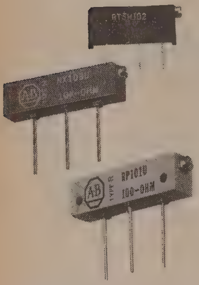
Allen-Bradley Trimming Potentiometers



TYPE E:
Cermet, single turn, 0.5W at 70°C, 10 ohms to 2 megs, ±10%, pin terminals, linear taper.

TYPE S:
Cermet, single turn, 0.5W at 85°C, 50 ohms to 1 meg, ±10%, pin terminals, linear taper.

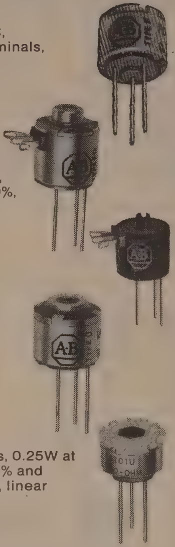
TYPE Z:
Cermet, single turn, 0.5W at 70°C, 50 ohms to 1 meg, ±10% and ±20%, pin terminals, linear taper.



TYPE RT:
Cermet, 20 turns, 0.75W at 70°C, 10 ohms to 2.0 megs, ±10%, pin terminals, linear taper, .250″ or .340″ high types.

TYPE N:
Hot-molded composition, 25 turns, 0.33W at 50°C, 100 ohms to 2.5 megs, ±10% and ±20%, pin terminals, linear taper.

TYPE R:
Hot-molded composition, 25 turns, 0.25W at 70°C, 100 ohms to 2.5 megs, ±10% and ±20%, pin or solder lug terminals, linear taper.



TYPE F:
Hot-molded composition, single turn, 0.25W at 70°C, 100 ohms to 5 megs, ±10% and ±20%, pin or solder lug terminals, 5 standard tapers.

TYPE FD:
Dual version of Type F; front section: solder lug only, rear: pin or lug. Well suited for Bridged-T or L-pad attenuator applications.

TYPE BT:
An all plastic version of the Type FD for excellent performance at high frequencies. Two types available for top or side adjustments. Also well suited for Bridged-T or L-pad attenuator applications.

TYPE O:
Hot-molded composition, single turn, 0.4W at 70°C, 100 ohms to 5 megs, ±10% and ±20%, pin or solder lug terminals, 5 standard tapers.

TYPE Y:
Hot-molded composition, single turn, 0.25W at 50°C, 100 ohms to 5 megs, ±10% and ±20%, pin terminals, 5 standard tapers.

Allen-Bradley Variable Resistors

INSTANT PROTOTYPES

MOD POT Instant Prototypes (MPIP) puts a wide range of MOD POT components at your fingertips. MPIP available from your A-B distributor. Then get your production quantities of MOD POT fast from A-B distributors, assembled to exacting factory standards.

SERIES 70 MOD POT®: Unique modular design offers virtually unlimited configurations: single, double, triple or quadruple. Options include: PC or solder lug terminals, variety of switches, vernier drive, concentric shafts, composition or cermet resistance elements. 50 ohms to 10 megs, ±10% and ±20% (composition); 100 ohms to 1 meg, ±10% (cermet). 1.0W at 70°C (composition); 2.0W at 70°C (cermet).

SERIES 72 MOD POT®: Similar to Series 70 except the case, bushing and shaft are non-metallic for electrical isolation. Available in single or dual combinations only. Power rating is 0.5W at 70°C.

SERIES 73 MOD POT®: Another version of Series 70 for applications that require single or dual section controls.

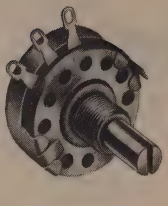
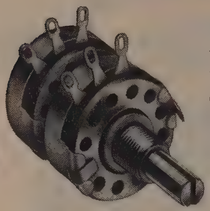
CQ	5214	Cermet	100 Ohms to 5 Megohms ±10%	0.5 Watt @ 125°C		−65°C to +175°C			Immersion Sealed
SP	5216		50 Ohms to 1 Megohm ±10% (5% available)	1.0 Watt @ 70°C	300V	−65°C to +150°C		0.438 *(11,11)* Deep by 0.375 *(9,52)* Diameter	

TYPE J (RV4):
Standard of the industry for for quality. Hot-molded composition, 50 ohm to 5 megs, ±10% and ±20% (special values to 1000 megs available), 2.25W at 70°C, single, dual, triple sections available, variety of switch types for single or dual sections.

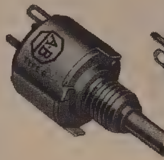


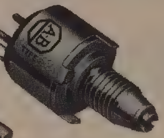


TYPE EJ:
Extra long life version of the Type J with rotational life exceeding one million rotations, single or dual configurations.

TYPE K:
A 3 0W (at 70°C) version of the popular Type J. −55°C to +150°C.

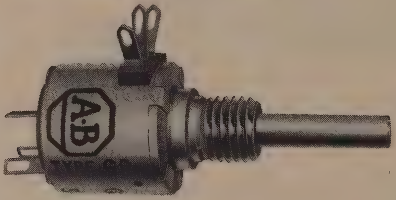
TYPE G (RV6):
Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70°C, single section available with or without SPST switch.



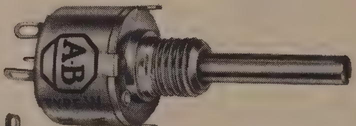


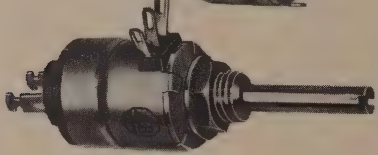
TYPE L:
Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.8W at 70°C, single section.

TYPE GD:
Dual section version of Type G. The smallest dual available.



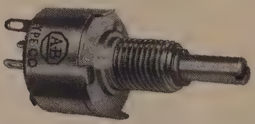
TYPE W:
Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70°C, single section.

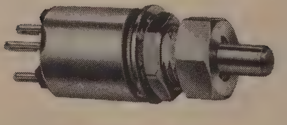




TYPE WR:
Radial-lead version of Type W. Available with switch with contacts that close at start of clockwise rotation (TYPE WRS) or with switch with contacts that close at start of counter-clockwise rotation (TYPE WRH).

TYPE CQ:
Cermet, 100 ohms to 5 megs, ±10%, 0.5W at 125°C, single section.





TYPE SP:
Cermet, 50 ohms to 1 meg, ±10%, 1.0W at 70°C, single section. Only ⅜″ diameter.

Standard options for all types include a variety of shafts, bushings, shaft endings, shaft lengths, and hardware.

Types FD, GD, J and the multi-section MOD POT with composition tracks are well suited for attenuator applications.

Allen-Bradley Hot-Molded Fixed Resistors

HB—RCR42

GB—RCR32

EB—RCR20

CB—RCR07

BB—RCR05

Allen-Bradley hot-molded composition resistors are high-quality units intended for general purpose use in the electronics industry.

Allen-Bradley Style RCR resistors not only meet all requirements of MIL-R-39008 but also exceed the S level (best level) of Established Reliability of 0.001% failure rate per 1000 hours. And only Allen-Bradley resistors are available in S level reliability in all five wattage sizes over the entire resistance range. The S reliability level is indicated by a yellow 5th color band on the resistor body.

Metal-clad hot-molded resistors (Types GM and HM) are fitted with metal clamps which surround the major portion of the resistor. The metal clamps provide rigid mounting and efficient heat transfer from the resistors to the metal chassis or panels on which they are mounted.

For more information request Publication EC21.

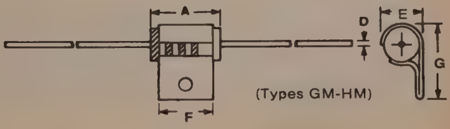
(Types BB-CB-EB-GB-HB)



(Types GM-HM)

Allen-Bradley Cermet Film Fixed Resistors

This one resistor can shrink your inventory costs

Capless design provides a reliable termination that does away with problems associated with end cap construction.

Leads are designed for both soldering and welding to give you freedom of choice about attachment, and long term storage capability.

Cores are high purity alumina with outstanding physical and thermal properties to reduce the incidence of fractures.

Coating is specially formulated to maintain outstanding insulation properties throughout environmental exposures.

Markings are clear, crisp and precise; dual resistance marking for easy identification, and durable to withstand production handling.

For more information request Publication EC33.

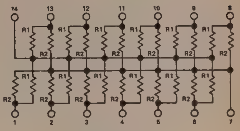
Prices and specifications subject to change without notice.

HOW TO ORDER

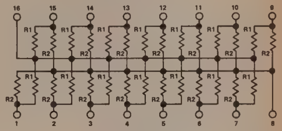
Example: Require Series 314A with resistance value=1000Ω. Order part #314A102.

STANDARD • PARALLEL • TERMINATION • NETWORKS

APPLICATIONS:
Series 314E and 316E networks are used in digital IC logic circuits and are especially suited for ECL and TTL applications. For ECL applications the network's circuit configuration serves a dual purpose. The R2 resistors are pull-down resistors and are normally tied to the most negative supply voltage. The R1 resistors, in parallel with the R2 resistors, provide the characteristic impedance for proper transmission line matching. In TTL logic the networks are used in pulse squaring applications.



SERIES 314E



SERIES 316E

PRICES

Quantity	314E	316E
1—24	$2.15	$2.30
25—99	$2.00	$2.14

Prices and specifications subject to change without notice.

HOW TO ORDER

Example: Require series 316E with characteristic impedance=50Ω. Order part #316E810131.

STANDARD • SENSE AMP • INTERFACE • NETWORKS

APPLICATIONS:

- Designed for use with 7520 series core memory sense amplifiers.
- Series 314M110 combines a threshold setting divider with balanced sense line termination and far end termination of two sense lines.
- Series 314M120 and 314M125 combine threshold setting dividers with four sense line termination. Following resistor values provide different threshold setting:

Resistor	314M120	314M125

316T110

STANDARD "O" PAD (BALANCED π) ATTENUATORS

APPLICATIONS:

These networks are used primarily in the communications industry where a fixed voltage attenuation is required with impedance matching. Voltage attenuation in steps of 0.5 dB from 0.5 dB to 31.5 dB can be obtained from the Series 314Z networks by the use of one "O" pad, or by placing two or more in series. For example, 20 dB is obtained by placing the 4 dB and 16 dB sections in series.

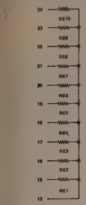
FN207

APPLICATIONS:

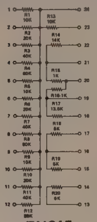
- All ladders—A/D and D/A conversion
- FN207—Input attenuation and range selection in digital instrumentation; particularly in digital voltmeters and multimeters.

CURRENT SUMMING NETWORKS

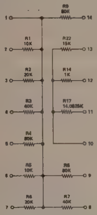


FN111 & FN112

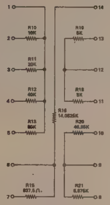
PRECISION RESISTOR ARRAYS



FN215



FN226



FN227

APPLICATIONS:

- A/D and D/A conversion.
- FN111*—10 bit binary operation.
- FN112*—3 place BCD operation (0 to 399).
- FN215—12 bit conversion—designed for use with Fairchild µA9650 IC.
- FN226**
- FN227**

*Both designed for use with Fairchild µA722 IC.

**Both designed for use with Intersil ICL 8018, 8019, 8020 IC's. FN226 gives 8 bit conversion. FN226 plus FN227 gives 12 bit conversion.

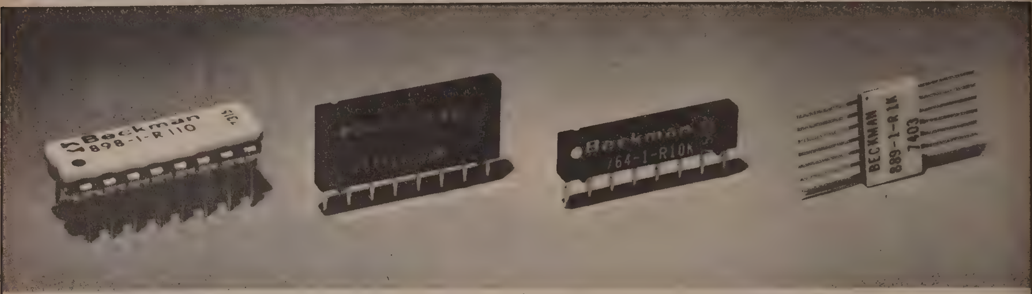
THICK FILM RESISTOR NETWORKS



Beckman RESNET™ Dual-In-Line and Single-In-Line Resistor Networks consist of various thick film resistor configurations packaged in standard 14- and 16-pin DIPs and 8-pin SIPs that offer:

- Significant reduction of "on the board" costs.
- Space savings over individual resistors.
- Total compatibility with automatic insertion equipment.

Specifications (DIP or SIP)

Beckman

THICK FILM RESISTOR NETWORKS

STANDARD ECL TERMINATORS

Beckman ECL Terminators are specifically designed for, and compatible with, the following Emitter Coupled Logic families:

- Motorola MECL 10,000 Series
- Signetics 10,000 Series ECL
- Fairchild 9500 Series ECL
- Texas Instruments Series SN10000 ECL
- National Semiconductor 10,000 Series ECL

Each terminator network utilizes thick film resistor materials with layouts specifically designed for low inductive characteristics and the high speed requirements of ECL systems. Where possible, the terminator networks include .01 μF decoupling capacitors. Each capacitor occupies the entire top surface of the ceramic substrate and consists of 2 metal plates and a single layer dielectric selected specifically for high capacitance at high frequency.

Custom Networks: Special resistance values, resistor combinations and resistor/capacitor arrangements are available for specific customer applications. If an "off the shelf" Helipot DIP resistor package doesn't meet your needs, a custom network will!

STANDARD DIP INTERFACE NETWORKS

MODELS 899-17 and 899-18 RESNET™ DIP networks are designed for use with 7520 Series core memory sense amplifiers. The 899-17 terminates two sense lines, and the 899-18 terminates four sense lines in Series 7520 dual sense amplifiers.

FIGURE 8 SENSE LINE TERMINATOR FOR μA711

MODEL 899-40 RESNET™ DIP network provides the optimum termination resistance and threshold level for interfacing the Intel 1103 series with the Intel 3208A. It provides six 600 ohm resistors (R_3) for terminating six interconnecting bit lines. In addition, this network provides a voltage divider (R_1 and R_2) to supply the 150 mV Threshold level required for the 3208A. The Beckman Series 899-40 uses standard 5V TTL power for the threshold setting network.

FLATPACK RESISTOR NETWORKS

Beckman Series 889-1 and 889-3 are 14-lead resistor flatpacks. Series 889-1 contains thirteen equal resistors with a common termination at lead 14, and Series 889-3 contains seven equal isolated resistors. The package style is compatible with standard flatpack IC dimensions, and is designed for applications requiring low package profile and ribbon lead terminations to the circuit board.

BOURNS INC

TRIMPOT PRODUCTS DIVISION

THICK-FILM NETWORKS

Bourns Resistor Networks are a product of many years of experience in the high volume production thick-film products. Bourns designs have been thoroughly tested to meet uncompromising standards as to product life and environmental performance. A proprietary thick-film resistor ink system imparts outstanding stability and temperature coefficient characteristics over the entire range of standard resistance values.

WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

DUAL-IN-LINE CERMET RESISTOR NETWORKS

CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS Series 760 Dual-In-Line cermet resistor networks are available in 8, 14, 16, and 18 lead styles. CTS now offers you a choice of four popular space-saver packages. All are designed to simplify automatic insertion along with IC's and other DIP products for reduced costs. Easy to hand mount, too. Available without cover coat, so you can trim for circuit balance in your own plant. Choose from standard circuits available off-the-shelf for immediate delivery or custom designed to your specifications.

Terminal Strength: 5 lb. tensile & compression, 30 sec.	±0.25%	±0.03%
Effect of Soldering: 63/37 solder, 246°C, 2 sec.	±0.25%	±0.05%

FEATURES:

- Low height profile
- .100″ lead spacing
- High overload capabilities
- 8, 14, 16 & 18 pin constructions
- Compatible with automatic insertion equipment
- 2 watt power capabilities
- Reduced insertion time
- Available with capacitors and/or active devices*

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: 8, 14, 16, and 18 pin dual-in-line modules on .100″ lead centers.

Standard Resistance Range: 22Ω through 1 MegΩ.

Special Resistance Range: Below 22Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):

50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ — 2.5%

Ratio Matching:

50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ — ±5%

Wattage Rating @ 70°C per module: 8 pin - .75 watt; 14 pin - 1.5 watts; 16 pin - 1.75 watts; 18 pin - 2.0 watts.

Standard Temperature Coefficient: ±300 ppm/°C.

Special Temperature Coefficient: to ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: ±1% or ½Ω (whichever is greater).

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 63/37 Tin/Lead. 246°C (475°F) for 9 sec. Max. reflow operation.

Lead Strength: 5# pull.

* Active devices added by CTS Microelectronics, Inc., Lafayette, Indiana.

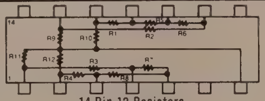
Pulse Squaring TTL Terminators

CTS 760-5 networks consist of two resistor pairs of the above value combinations. The resistors are connected together in series with a common line for power and a common line for ground. The junction of each pair is brought out to a separate terminal.

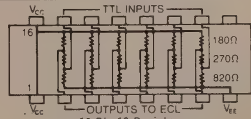


14 Pin-12 Resistors
Part Number 760-19

Interface Network

CTS 760-19 resistor network provides compatible interfacing with the μA711 dual differential voltage comparator for core memory sense amplifier applications.

Resistance Values:
R1 — R4 = 20Ω ±0.5Ω
R5 — R8 = 12KΩ ±2%
R9 — R12 = 120Ω ±2%



16 Pin-18 Resistors
Part Number 761-45

TTL to ECL Translator

CTS Series 761-45 network consists of 18 resistors internally divided into six identical three resistor sections for direct translation from TTL to ECL language.

ORDERING INFORMATION: Place orders using the following address: CTS OF BERNE, INC., 406E Parr Road, Berne, Indiana 46711 • Call and ask for John Henry at (219) 589-3111 • TWX 810-323-1580

WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

SINGLE-IN-LINE CERMET RESISTOR NETWORKS

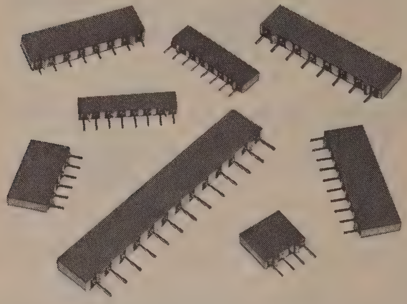
CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS . . . Leader in the field of **Low Profile** space-saving Cermet Resistor Modules. Readily recognizable because of the familiar CTS Blue.

As is well illustrated, these modules have been specifically designed to save space.

So if you want to reduce the size of your design or add more complex circuitry without increasing size, CTS rates top consideration.

Most appealing is the fact that "The Little Blue Brick" is an extensive "Off The Shelf" item with CTS.



750 Series

FEATURES:

- Compact edge mount modules
- Ultra high stability and reliability
- Automatic insertion capabilities
- Reduced insertion time
- Fewer items to inventory
- Space savings over individual resistors
- Available with capacitors and/or active devices*
- Available with .100″, .125″ and .150″ lead centers

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: Cermet thick film single-in-line resistor networks.

Standard Resistance Range: 33Ω through 1 MegΩ.

Special Resistance Range: Below 33Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ —2.5%

Ratio Matching:
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ —±5%

Standard Temperature Coefficient: ±250 ppm/°C.

Special Temperature Coefficient: ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: to ±0.5% or ½Ω (whichever is greater).

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 63/37 Tin/Lead. 277°C (530°F) for 8 sec. Max. Reflow operation.

Lead Strength: 5# pull.

Wattage Rating @ 70°C (see chart below).

Lead Centers	Ht. of Module (Max.)	Number of Pins										
		2	4	5	6	7	8	9	10	11	12	13

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

High Performance Power Film Resistors

Micronox* Resistance Films Provide Higher Power Ratings and Higher Operating Temperatures

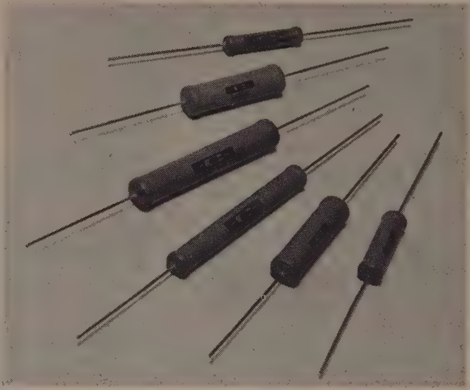
In the 12 years since Caddock Electronics first introduced Micronox* resistance films, the resistors produced with this advanced material have been providing electronic engineers with this long-sought combination of high performance advantages:

- **Higher power ratings.**
- **Higher operating temperatures.**
- **Improved temperature characteristics.**
- **Exceptional stability.**

The unique structure of Micronox* resistance films makes them relatively insensitive to high ambient temperatures and thermal shock. By firing these complex oxide films onto solid ceramic substrates, Caddock resistors achieve the higher stability that permits higher power densities and higher internal operating temperatures.

As a result, many types of Caddock resistors are rated for continuous operation at +275°C!

And Micronox* resistance films also provide a greatly extended resistance range that increases 'critical' resistance values up to 10 times higher than other types of power resistors.



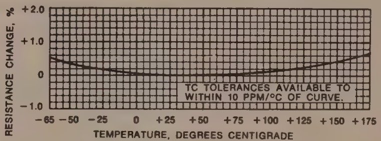
This higher performance has provided a means for immediately up-grading the specifications of many existing electronic circuits and systems, and has been instrumental in reducing the size, complexity and cost of newly developed electronic equipment.

Improved Temperature Characteristics, too

The curved temperature coefficient of Micronox* resistance films provides two important advantages:

First, because the shape of the curve is carefully controlled, the 'flat' section — that portion of the curve on each side of the point where the temperature coefficient is 'zero' — can be selected to provide minimum temperature effects over a wide range of temperature.

Second, because Micronox* resistance films are very stable, the "TC" of sets of resistors can be carefully matched for accurate temperature 'tracking.' On special order, this ratio 'tracking' can be held as close at 2 PPM/°C!

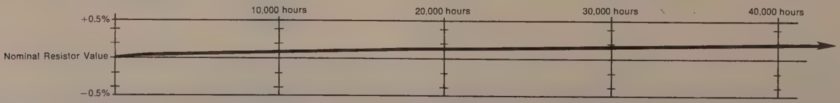


These temperature characteristics are a great advantage in all types of divider and reference circuits where precise resistance ratios are the primary source of equipment accuracy. Many precision instruments and scientific measurement systems now make use of matched sets of Caddock resistors to improve their overall performance specifications.

Outstanding Long-Term Stability

Annual load-life stability tests conducted on various types of Caddock resistors have demonstrated typical stability within 0.1% per 1000 hours and extended life stability of 0.01% per 1000 hours.

And in an extended load-life stability test that has now been running continuously for over 5 years — past the 50,000 hour mark — Caddock Type MP Power Film Resistors have achieved extended life stability better than 0.02% per 1000 hours!



This exceptional stability in combination with the other performance advantages of these advanced resistors is the reason why Caddock High Performance Film Resistors are the first choice in today's most demanding applications.

High Performance Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Non-Inductive Performance

When the lowest levels of inductance are required, Caddock High Performance Film Resistors can be specified with our Exclusive Non-Inductive Design. This special serpentine pattern provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor or in the basic Micronox* resistance film, settling times and minimum distortion in all types of high frequency circuits.

And because this unique, patented design can be included without any changes in either the shape or size of the resistor or in the basic Micronox* resistance film, there's no derating of any performance advantages when you specify Caddock's Exclusive Non-Inductive Design!

In high power applications, for example, the Type MS Power Film Resistor with non-inductive performance can increase both the maximum resistance range and the maximum voltage ratings up to 10 times! Similar improvements available in other types of Caddock resistors can reduce both the size and the number of resistors required to meet circuit requirements and still maintain the superior stability and reliability that are an integral part of every Caddock High Performance Film Resistor.

Index to Caddock High Performance Film Resistors in EEM:

Here is an index to the many types of High Performance Film Resistors now available from Caddock Electronics:

Type MS and MR — Precision Power Film Resistors .... see pages 2•1430 & 2•1431
Type ML and MM — Precision Film Resistors .... see page 2•1432
Type MK — Non-Inductive Film Resistor in a Rectangular Case .... see page 2•1433
Type MG and MH — Precision High-Voltage Resistors .... see pages 2•1434 & 2•1435
Including Model MH 7-11 Shielded Resistor
Type MV — Low-R Power Film Resistors .... see page 2•1436
Type MP — Chassis Mounted Power Film Resistors .... see page 2•1437
Type MC — Precision Chip Resistors .... see pages 2•1438 & 2•1439
Custom Resistive Networks .... see page 2•1440
Precision Resistor Networks in SIP and DIP Packages .... see page 2•1441
Multi-Megohm Resistors .... see page 2•1442

Caddock also provides complete test results on the Annual Reliability and Qualification Tests that are conducted to verify performance to applicable government specifications. These reports are described in more detail on page 2•1443 and are available on request.

For complete information and technical assistance in the selection of any type of Caddock High Performance Film Resistors, please write or call to our main office in Riverside, California. We can often provide resistors for evaluation in 10 days or less, and production quantities of any model and type of resistors are always delivered on schedule.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MS & MR Power Film Resistors

Here are the power film resistors that overcome the design limitations of wire-wound resistors! Caddock Power Film Resistors provide power ratings to 12.5 watts at 6000 volts in a single axial lead resistor. By extending both the resistance range and maximum voltage ratings, Type MS Power Film Resistors simplify circuit design and reduce equipment complexity and cost.

All These Features in One Resistor

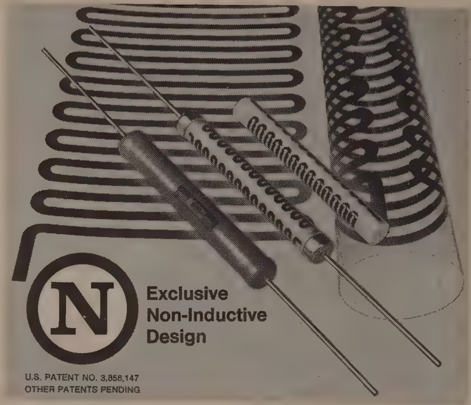
- Full power and voltage ratings, without derating —
  - — for non-inductive performance
  - — for high resistance values that extend the critical resistance value up to 10 times.
- Higher voltage ratings without the limitations of minimum wire size and spacing.
- Excellent long-term stability. Tests demonstrate typical stability of 0.05% per 1000 hours over extended life.

MICRONOX Resistance Films

Type MS performance begins with Micronox resistance films, the basic element in every Caddock resistor. Produced exclusively by Caddock Electronics, these proven complex oxide films have been used reliably for 12 years in Caddock's precision power resistor products.

Micronox resistance films are fired directly onto a ceramic core, in air, at 1400°F. These resistance films have demonstrated outstanding stability when exposed to a high ambient temperature, thermal shock and high power densities.

This totally new approach to precision power resistors opens new design possibilities because of the wider resistance range, precise temperature characteristics, and higher temperature and power handling capability.



U.S. PATENT NO. 3,858,147
OTHER PATENTS PENDING

There's no derating of performance when you specify Caddock's Exclusive Non-Inductive Design.

When non-inductive performance is specified, we produce these power film resistors with a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

Type MS Power Film Resistors are produced under carefully controlled manufacturing and test procedures.

Manufacturing Control

Type MS Resistors are produced under strict manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

Quality Control

Type MS Resistors receive quality surveillance which reaches from incoming raw materials to your packaged resistors in the shipping area. And our QC system has been approved for conformance to the requirements of NASA NPC200-3 and MIL-I-45208 in many recent surveys.

Reliability Verification

Type MS Resistors are included in the Caddock Reliability Testing Program. Conformance to specification parameters including Extended Life, Shock, Vibration and Humidity are verified on a periodic basis. Data from MS resistors can be compared by similarity to other Caddock resistor types, since Type ML, MM, MS, MP, MG, MH and MK represent an identical combination of materials — aluminum oxide substrate, Micronox resistance film and silicone insulating coating.

Type MS & MR Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MS High Performance Power Film Resistors have a proven performance history in industrial, computer, military and space applications. This unique line now includes higher power ratings — up to 15 watts — and resistance values to 30 Megohms.

These exceptional resistors also provide outstanding extended life stability. In annual reliability tests where 2000 hour load-life stability data has been established, Type MS Power Film Resistors have demonstrated typical stability well within 0.1% per 1000 hours and extended life stability of 0.05% per 1000 hours.

Temperature coefficients are also low, with the standard TC of 50 PPM/°C available in all models of the Type MS Power Film Resistor. They can also be supplied on special order in matched resistor sets that provide ratio tracking with varying temperature to within 2 PPM/°C.

All of the Type MS Power Film Resistors are constructed with Micronox* resistance films bonded to a high strength solid ceramic core. Nickel alloy end caps and gold plated dumet axial leads complete the assembly. Encapsulation is provided by a silicone conformal coating.

Non-inductive construction is available in most models. Specify by adding "N" suffix to Model Number.

CADDOCK
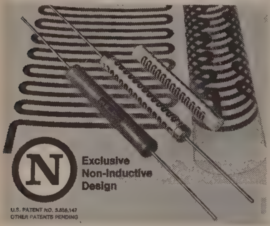
HIGH PERFORMANCE FILM RESISTORS

Type ML & MM Precision Film Resistors

Type ML and MM resistors have a proven performance history in industrial, computer, military and space applications. With power ratings up to 3 watts and resistance values to 15 megohms, these outstanding resistors are ideal for applications requiring tolerances as close as 0.1% and extended life stability of 0.1% per 1000 hours.

The Type MM Precision Film Resistors provide a maximum operating temperature range of +275°C and both the Type ML and the Type MM have temperature coefficients of only 50 PPM/°C over the range from −15°C to +105°C.



Construction includes Micronox* resistance films fired onto a high strength solid ceramic core. End cap construction and a molded case completes the resistor assembly and provides increased resistance to abrasion and solvents.

Caddock's Exclusive Non-Inductive Performance can also be specified for any of these resistors by adding the "N" suffix to the model number.

Low Cost Non-Inductive Precision Film Resistor in Rectangular Case

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

NEW! EXTENDED RESISTANCE RANGE!
Now available in values up to 100 Megohms!

Developed as a low cost precision resistor for high density packaging in large volume printed circuit applications, Type MK Precision Film Resistors are now available in values as high as 100 Megohms!

Constructed with Caddock Micronox* resistance films fired onto a solid ceramic substrate, the Type MK Precision Film Resistors combine all of these outstanding advantages:

• Power Rating	.75 watts at 125°C.
• Resistance Tolerance	±1% standard, to ±0.1% on special order.
• Operating Temperature	−55°C to +175°C.
• Temperature Coefficient	50 PPM/°C to 10 Megohms, 80 PPM/°C to 100 Megohms, referenced to 25°C with the △R taken at −15°C and +105°C.
• Extended Life Stability	Better than 0.05% per 1000 hours.

plus Caddock's Non-Inductive Performance for greater pulse fidelity and wider bandwidths in high frequency circuits!

The case of the Type MK resistors is a standard CK06 rectangular package that is only 0.3 inches square and 0.1 inches thick! The radial leads have a standard spacing of .2 inches and the resistor can be handled by automated assembly equipment.

Because the temperature coefficients of all values of Type MK Precision Film Resistors can be matched for 'tracking' within 40 PPM/°C, these resistors are finding wide application in compact instrumentation and scientific equipment where resistor precision and stability is vital to the ultimate accuracy of the measurement system.

The construction includes a transfer molded case that meets all requirements of extreme environmental specifications.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MG & MH Precision High-Voltage Resistors

Type MG and MH resistors have been proven in years of use in critical applications such as airborne computer, manned space flight, geophysical instruments, medical electronics, etc., where long term reliability in extreme environment is of utmost importance. This line now includes a wide range of sizes with extended resistance range to lower values and higher values.

Matched resistor sets are available to your ratio requirements, with ratio TC as close as 2 ppm/°C. These divider sets are widely used in such applications as the control voltage feedback for precision high voltage supplies.

Special High-Voltage and High-Voltage Pulse Applications

All power ratings and maximum working voltage ratings are for continuous duty. Ratings are based on pre-stress voltage levels applied as part of the manufacturing process and provide for stable resistor performance, even with momentary overloads applied. These resistors, with non-inductive construction, can be factory-conditioned to withstand up to 60% higher maximum working voltage, provided power ratings are not exceeded. (For this higher rating specify -15, example: MG750N-15. Overload and overvoltage ratings do not apply to -15 resistors).

Originally, MG and MH resistors were available only in megohm values, however, in lower resistance values they have found wide use in pulse and current limiting applications where high voltage levels are involved. Pulse levels of several times rated working voltage have been applied as factory pre-stress for special applications. Caddock has facilities to prove many pulse application parameters, and we invite you to submit your specific design problem. Non-inductive construction is especially valuable in pulse applications to minimize problems of localized resistor degradation due to reflected wave and other unusual phenomena associated with instantaneous current situations.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MV
Low-R Power Film Resistors

Type MV resistors extend the advantages of Caddock Micronox* resistance films to values as low as 0.5 ohms in a unique non-inductive design. The multiple-path resistance pattern distributes the currents evenly throughout the resistor and reduces the inductance to an absolute minimum.

The exceptional stability of Caddock Micronox* resistors — produced by firing these complex oxide films onto solid ceramic substrates — provides power ratings as high as 10 watts in a compact axial lead configuration that features excellent overload ratings.

Type MV resistors are ideal for use in high frequency circuits where close resistance tolerances and excellent long-term stability are required.

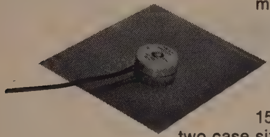
Type MP Chassis Mounted Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

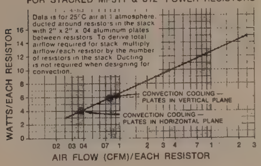
Type MP Chassis Mounted Power Film Resistors are made with Micronox* resistance films fired onto a ceramic substrate which is thermally bonded to an anodized aluminum base. By mounting this assembly directly to a metal surface for improved heat transfer, these unique resistors provide increased packaging densities in many types of electronic equipment.

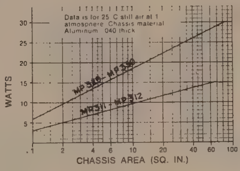


15 and 30 watt ratings are available in two case sizes that permit through-bolt attachment to the chassis or other heat conducting surface. The molded silicone case encapsulates the resistor assembly to meet the requirements of the most stringent environmental specifications.

The outstanding stability of the Type MP Power Film Resistors has been demonstrated in a 4½ year, 40,000 hour program of continuous load-life testing. Extended life stability during these full-power tests has been better than 0.01% per 1000 hours!

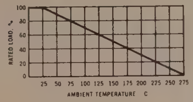
POWER RATING
FOR STACKED MP311 & 312 POWER RESISTORS

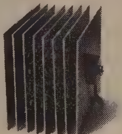




These charts of power ratings versus ambient temperature and chassis area show the high power levels that can be achieved with forced air cooling and with convection cooling in either vertical or horizontal orientation.

DERATING CURVE





Stacked Type MP resistor assemblies—constructed by bolting and resistors between aluminum heat dissipating plates—provide a simple means of further improving packaging densities.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

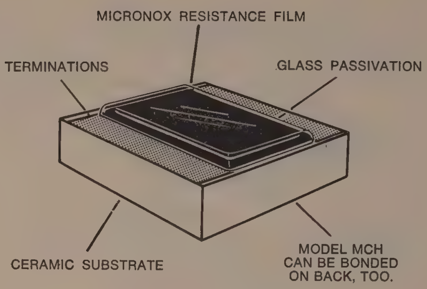
Type MC Precision Chip Resistors and High Resistance Precision Chip Resistors

Caddock introduces the Type MC Precision Chip Resistors — a new and complete line of precision chip resistors that meet the most stringent requirements of all types of hybrid circuits.

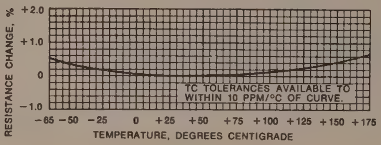
The latest advance in Caddock's 12 years of experience in the development and production of high performance film resistors, the Type MC Precision Chip Resistors utilize Micronox* complex oxide resistance films to provide all of these advantages:

- **Extended Resistance Range.**
  1 Megohm resistance values are now available in even the smallest of these chips, and the Model MCV Multi-Megohm Chip Resistors include resistance values up to 500 Megohms!
- **Precision Resistance Tolerances.**
  The standard resistance tolerance for all models and values is ±1%!
- **Higher Operating Temperatures.**
  +175°C maximum operating temperature is the standard specification for every model and all Type MC resistors can be operated without derating at +125°C!
- **Lower Temperature Coefficients.**
  TCs of 50 PPM/°C and 80 PPM/°C are standard over a 120°C operating temperature range.
- **Matched Temperature Coefficients.**
  TC tracking between any two chip resistors of any type, model and resistance value will stay within 40 PPM/°C over the temperature range from −15°C to +105°C.
- **Exceptional Stability.**
  The high stability of Caddock Micronox* resistance films keeps resistance shifts to a minimum under all thermal and environmental conditions.

There are four basic models to choose from, including chips for wire-bonding, solder reflow and a solderable design with wrap-around tinned terminals.



The typical TC curve shown in this graph illustrates the dish-shaped temperature characteristic of Micronox* resistance films. While the shape of this curve will vary slightly with the resistivity of the film, these resistance films provide a nearly 'zero' TC over a limited temperature range — a feature that can be the source of additional improvements in the stability of many electronic circuits.



For information on price and delivery of both production and evaluation quantities of any of the Type MC Precision Chip Resistors, contact the high performance film resistor specialists at Caddock.

Type MC Precision Chip Resistors are produced under carefully controlled manufacturing and test procedures.

Manufacturing Control.
Type MC Precision Chip Resistors, like all other Caddock High Performance Film Resistors, are produced under strict manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

Quality Control.
Type MC Resistors receive quality surveillance which reaches from incoming raw materials to your packaged resistors in the shipping area. And our QC system has been approved for conformance to the requirements of NASA NPC200-3 and MIL-I-45208.

SPECIFICATIONS

All Type MC Precision Chip Resistors

Resistance Tolerance: ±1% standard. Tolerances to ±0.1% on special order. (Tolerances less than ±1% will have organic passivation.)

Operating Temperature: −55°C to maximum specified temperature.

TC Tracking: 40 PPM/°C maximum between any resistor model and any resistance value. (Ref. 25°C, ΔR taken over range from −15°C and +105°C)

Short Time Overload: 5 times rated power or 1.5 times maximum allowable working voltage, whichever gives the lower power, for 5 seconds. Maximum ΔR .5%.

High Temperature Exposure: R Shift .5% max.*

Resistance to Bonding or Solder Exposure: R Shift .25% max.*

Moisture Resistance: R Shift .5% max.*

1000 Hour Load Life: R Shift .5% max. when mounted on a heat sink which maintains surface temperature within maximum range.

†Temperature Coefficient: Referenced to 25°C, ΔR taken at −15°C and +105°C.

♦ Dimension does not include thickness of solder deposit.

* Test parameters per applicable portions of Mil-R-55342

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

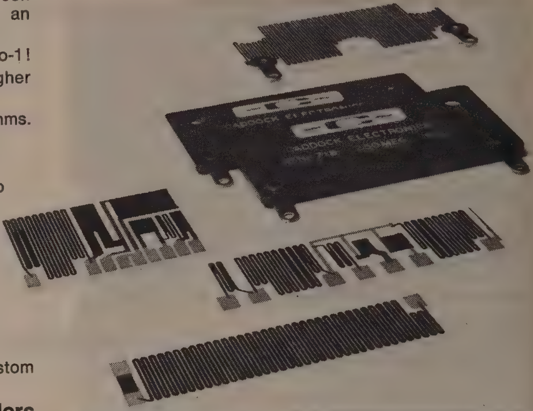
Custom Resistive Devices

For the ultimate in resistor network performance, Caddock produces many types of custom resistive networks with an unsurpassed combination of advantages:

- **High Resistance Ratios**—from 1-to-1 up to 1,000,000-to-1!
- **High Transient Handling Capability**—up to 100 times higher than the rated power level!
- **Extended Resistance Range**—from 1 ohm to 5000 Megohms.
- **Tight Resistance Tolerances**—to 0.05%.
- **Tight Ratio Tolerances**—to 0.025%.
- **Close Ratio Tracking**—to 5 PPM/°C from −15°C to +105°C.
- **Exceptional Resistor Stability**—as close as 0.01% per 1000 hours in extended life.

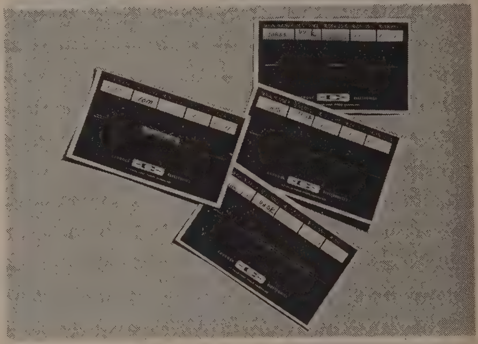
This combination of advantages in one resistor network often provides a practical—**and immediate**—means for improving the performance and specifications of electronic circuitry and equipment without any changes in the design!

Here are examples of the many high performance custom resistive networks available from Caddock Electronics:



Multimeter and Oscilloscope Input Signal Dividers

Precision voltage dividers with ratios as high as 1,000,000-to-1 are often required for range switching at the input of laboratory instruments. For these applications, Caddock produces single-chip networks with resistance ratios accurate to 0.025% and with the temperature coefficients matched to within 5 PPM/°C over the normal operating temperature range.



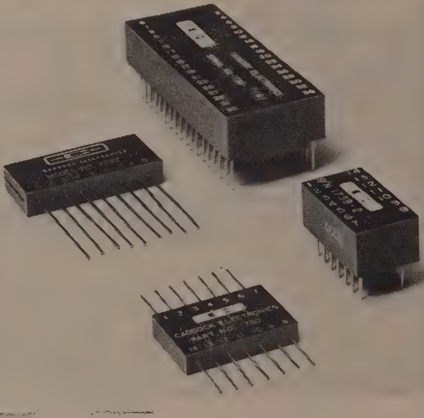
R-C Networks

A wide range of capacitance values can be combined with our precision resistors on a single chip. These high stability capacitors may be isolated from the other components on the chip or combined in R-C functions to meet your requirements.

Matched Resistor Sets

Sets of matched resistors with ratios held as close as 0.05% over the range of ratios from 1:1 to 1:100,000 provide solutions to the toughest accuracy problems in voltage dividers, reference networks, feedback networks, current summing networks, and high voltage divider networks. Virtually all of the various types of Caddock Film Resistors can be matched in discrete resistor sets for both tight ratio tolerances and TC tracking—some as tight as 2 PPM/°C over specific temperature ranges—making it practical to select **and intermix** the particular type of resistors needed to meet other important performance requirements.

These matched sets and networks can also be assembled in molded packages or DIP configurations, and in special shapes to meet your design requirements.



DAC Ladder Networks

Networks with resolution up to 12 binary bits can be produced, and the superior long-term stability of Micronox™ resistance films keeps accuracy higher for longer, more error-free operation of advanced digital systems.

Precision High Voltage Divider Networks

Special packages are available for discrete resistor sets, and flat ceramic substrates provide low profile configurations with integral mounting holes.

TC 'tracking' as close as 2 PPM/°C can be provided, and special encapsulation techniques meet rugged environmental limits.

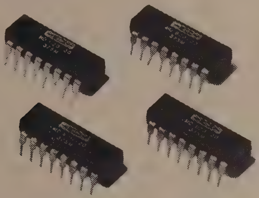
Precision Resistor Networks in DIP and SIP Packages

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

The exceptionally high performance of Caddock Micronox* resistance films is now available in many standard DIP and SIP resistor packages that provide a unique combination of advantages:

- Tight Tolerances.
- Tight Resistance Ratios.
- Lower Temperature Coefficients.
- Matched TC Ratios.
- Extended Resistance Range.
- Excellent Transient Handling Capability.
- Outstanding Load-Life Stability.

These advantages make Caddock DIP and SIP Precision Resistor Networks the ideal choice for many high accuracy analog and digital circuits, including —

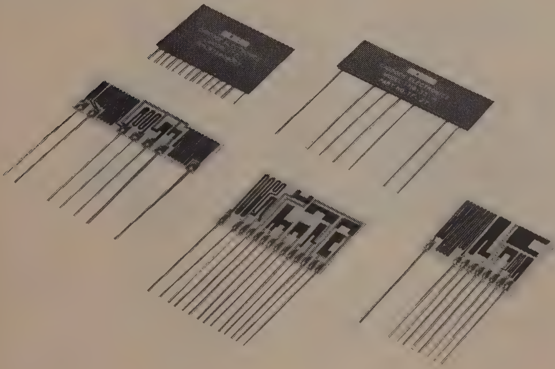


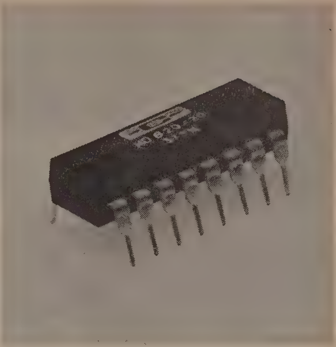
- Precision voltage dividers for multi-range instruments.
- Precision resistor ratios for accurate amplifier gain control.
- Feedback networks for precision power supplies.
- Custom ladder networks for precision D/A and A/D conversion circuits.

The DIP packages are available in all of the standard 14, 16 and 18 pin configurations. SIP packages are available in a wide variety of shapes and sizes to fit the requirements of each application, with standard or custom lead spacings and lengths.

For complete information on the high performance precision resistor network for your application, please call or write directly to the applications engineers at Caddock Electronics.

*Micronox is a registered trademark of Caddock Electronics, Inc.





14, 16 and 18 Pin DIP Packages and Standard and Custom SIP Packages

Resistance Range: 10 ohms to 10 Megohms in standard DIP packages. 1 ohm to 50 Megohms in SIP packages.

Number of Resistors per Package: Up to 36 resistors, depending upon interconnections.

Tolerance: ±0.5% and ±1.0% (Tolerances to ±0.1% on special order.)

Absolute Temperature Coefficient: ±50 PPM/°C for values up to 1 Megohm.§ ±80 PPM/°C for values above 1 Megohm.§

Ratio Tolerance: ±0.1%, ±0.25% or ±0.5%, as specified.

Ratio Temperature Coefficient: 40 PPM/°C.§ Special TCs to 5 PPM/°C.§

Power Rating: Up to 1 watt per resistor. Up to 2 watts per package.

Overload: 2.5 times rated voltage for 5 seconds. R shift .25% max.

Voltage Coefficient: To 0.1 PPM/volt when required.

Voltage Rating: 150 volts per resistor or 150 volts between adjacent pins.

Mechanical Configurations: DIP packages are molded of flame-proof high temperature materials and conform to mechanical outline requirements of Mil-R-83401B.

SIP packages include molded or conformal encapsulation and provide lead spacings of .100″, .125″, .150″ and .172″ as specified.

SIP package height is typically .300″ or .500″.

§ Temperature Coefficient: Referenced to 25°C, ΔR taken at −15°C and +105°C.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Multi-Megohm Film Resistors

Model 1718

This Multi-Megohm Resistor is designed to provide non-inductive high resistance values with precise resistance-temperature characteristics. These are especially useful in high resistance voltage dividers where fast response is important. On special order, resistor sets can be provided with voltage ratio accuracy to ±.01% and temperature tracking within 2ppm/°C.

Construction is high strength alumina substrate with fired-on Micronox resistance film and coated with material specially selected to prevent parallel leakage throughout temperature range. Units are compatible with most RTV potting.

Exclusive modular stack-up package

SPECIFICATIONS

Resistance Range: 1 meg-333 meg

Power Rating: 3 Watts @ 25°C

Max. Working Voltage: 12000 Volts

Resistance Tolerance: ±1% (Tolerances 0.2% on special order)

Terminal Material: Gold Plated Copper

Encapsulation: Conformal Coating

Insulation Resistance: 100,000 Megs, Min. when mounted

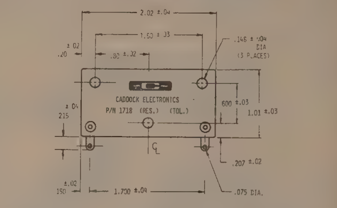
Temperature Coefficient: ±80 PPM/°C Referenced to 25°C, △R taken at −15°C and +105°C

Thermal Shock: Mil-Std 202, Method 107 R shift .5% Max.

Loadlife: 1000 hours at rated power R shift .8% Max.

Mounting: Three 6-32 Nylon Screws with Standoff Spacers, .050 Thick, Supplied with unit

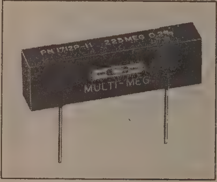
Operating Temperature: −55°C to +125°C



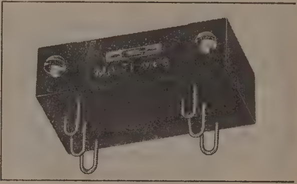
Substrate .054± .01 Thick. .09± .01 Thick Including Lug.

Model 1712

Caddock Multi-Meg Resistors utilize the exclusive Micronox resistance films, developed by Caddock, in a new and unique stack-up package. Extremely high resistance values, with excellent T.C. characteristics, can be specified to fit in an unusually small space by stacking as many units as required. Resistance density as high as 2000 megohms per cubic inch. Absolute T.C. is less than 80 PPM/°C between —15°C and +105°C. T.C. matching between modules to within 10 ppm/°C can be provided on special order. Modules may be combined in groups as voltage dividers, and also stacked with a trimmer for extremely fine adjustment of voltage ratio.

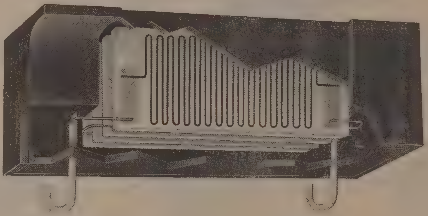


from 10 meg to 200 meg, 80 PPM T. C.* packaged in miniature stack-up case



Build resistance values as high as required with exclusive modular stacking design

Resistor construction: ceramic resistance wafers potted in cushioning material, packaged in a rugged molded case.



SPECIFICATIONS

***Temperature coefficient:** 80 PPM/°C, ref. 25°C, △ R @ −15°C and +105°C.

Resistance Range (per module): 10 meg. to 200 meg.

Standard resistance tolerance: ±1%.

Maximum working voltage: 1000 volts.

Dielectric strength: 1000 volts.

Moisture resistance: MIL-STD-202, method 106, R shift 0.8% max.

Load Life: 1000 hours at rated power, R shift 0.8% max.

Model 1712S — with solder lug Terminals.

Model 1712P — with pin Terminals.

"The CADDOCK Reports" Engineering, Test and Design Data

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Caddock Electronics maintains a continuous program of reliability and performance testing on all of the many types of resistors presently being produced. In addition to the tests for stability and temperature characteristics that are part of our normal manufacturing procedures, we also perform semi-annual reliability tests to confirm compliance to the most stringent military and industry performance requirements.

The results of these tests, plus other extended life data developed over literally years of continuous testing that verifies performance characteristics, are now available to design engineers in a series of "Caddock Reports." You may request your personal copy of any of these test results by writing or calling to our main offices in Riverside, California.

Reliability Test Reports

These tests are conducted semi-annually to confirm the detailed performance of various types of Caddock High Performance Film Resistors when subjected to the requirements of applicable "Mil" specifications.

The report includes detailed graphs that show the actual performance-stability of five basic types of Caddock resistors. Individual test results for 15 different groups of resistors are shown for each of six tests: Temperature Cycling, Overload, 2000 Hour Load-Life, Moisture Resistance, Low Temperature and Shock and Vibration.

Extended Load-Life Stability Test Report

This report shows the exceptional stability that Caddock resistors deliver under full power conditions. The tests were initiated in May of 1969 on Caddock Type MP Power Film Resistors and are still being conducted at this time.

The test report includes a graph of resistor stability as measured over a period of 40,000 hours — **a continuous test period of over 4½ years** — that demonstrates extended-life stability better than 0.01% per 1000 hours! And there have been no failures of any kind during this continuous test program!

This test will be continued indefinitely as a means of verifying the outstanding stability and reliability of Caddock High Performance Film Resistors and the test summary regularly up-dated to show the latest data.

The Caddock General Catalog

Complete specifications and descriptions of all of the many types of Caddock High Performance Film Resistors are included in this catalog. And as new resistor types are introduced by Caddock, additional catalog data is made available.

Detailed information on the performance and availability of all Caddock resistors is available on request.

The outstanding stability and reliability of CADDOCK Power Film Resistors can give your equipment greater accuracy and longer life!
This 40,000 hour, 4½ year test proves it!

*1. Allowable energy per one shot pulse. For continuous duty, pulse repetition rate and duration must be considered.

*2. Peak voltages. Up to 100% increase can be obtained by special dielectric coatings and/or anti-corona terminations.

*3. Nickel metallization standard for AS types. Aluminum metallization standard for SP types. Other metallization available upon request; example: copper, solder-tinned copper or silver.

*4. Refer values other than shown to the plant for special quotation.

CARBORUNDUM

CARBORUNDUM® VARISTORS

Standard varistors described below have a 10% tolerance on voltage. Also available: leadless discs and rods, voltages specified at intermediate values or at other currents, and voltage tolerances of ±15% and ±20%. Available at extra cost: voltage tolerances of ±5% and ±7%, color coding, and special coatings.

Standard disc varistors have a black flame-retardant PVC coating. Also available: Glyptal coating and kinked leads for printed circuit board insertion.

Standard rod varistors have a blue epoxy coating. Available at extra cost: formed leads for printed circuit board insertion.

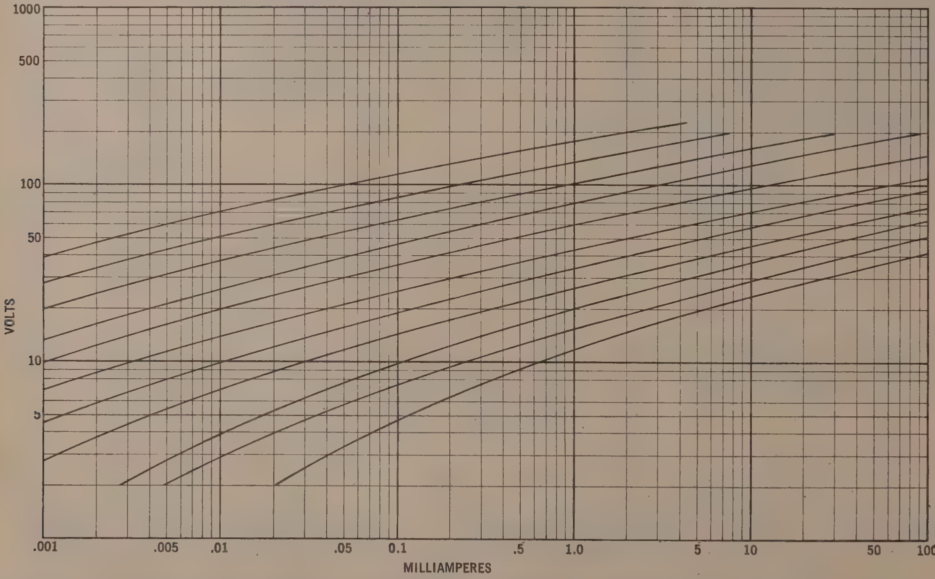
	379BNR2-	0.500	0.125	0.650	0.400	0.032	0.250	200	0.500	1.0	1.0
	328BNR2-	0.750	0.062	0.900	0.350	0.032	0.375	100	0.750	0.5	2.2
	925BNR2-	0.750	0.100	0.900	0.380	0.032	0.375	150	0.750	0.8	2.2
	613BNR2-	0.750	0.125	0.900	0.400	0.032	0.375	200	0.750	1.0	2.2
	923BNR2-	1.000	0.100	1.150	0.380	0.040	0.375	150	1.500	0.8	4.0
	463BNR2-	1.000	0.125	1.150	0.400	0.040	0.375	200	1.500	1.0	4.0
	927BNR2-	1.250	0.100	1.400	0.380	0.040	0.375	150	2.250	0.8	6.2
ROD STYLES (figure 2)	231BNR4-	0.156	0.625	0.250	0.812	0.032	—	800	0.750	5.0	0.1
	233BNR4-	0.250	0.625	0.375	0.812	0.032	—	800	1.000	5.0	0.25
	234BNR4-	0.250	1.000	0.375	1.188	0.032	—	1500	1.500	8.0	0.25

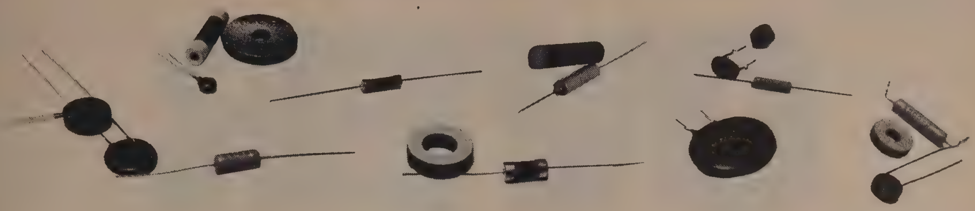


These curves are plotted for a family of variously rated 379BNR2- varistors. The characteristics of other varistor styles are of similar shape, and they can be approximated by using the "curve factors" shown in the above chart. To do this, multiply the voltages on the ordinate by the voltage curve factor for the style chosen, and multiply the currents on the abscissa by the current curve factor. For a type 233BNR4- varistor, for example, the 10.0 volt, 4.0 milliampere point on the chart would be read as 50.0 volts, 1.0 milliamperes.

CARBORUNDUM

The Carborundum Company, Graphite Products Division, Post Office Box 339,
Niagara Falls, N.Y. 14302 Tel: (716) 278-2521 Telex: 91-555 (CARBO GLO NGF)

CARBORUNDUM® VARISTORS



Carborundum silicon carbide varistors are voltage-dependent resistors which are offered in a wide variety of configurations, including discs, rods, and washers. In addition to the sizes shown on these pages, rods are available up to 18 inches in length, washers are available up to 3½ inches in diameter. Typical uses include limitation of peak discharges, spike suppression, stabilization of voltages, and generation of nonlinear functions.

Varistors are specified by the voltage measured across them, suitably toleranced, at some constant current. The slope of the voltage-current characteristic is most often given by the maximum voltage ratio for two specified currents.

In general the characteristic for a varistor may be approximated by the equation:

$$i = Ke^n$$

where i and e are instantaneous current and voltage respectively, K is a proportionality constant, and n is an exponent applicable in the range in which the varistor is used: most often it is between 3 and 5.

The silicon carbide varistor is a "forgiving" component. When hit by a voltage surge, the energy is absorbed throughout its body, not at a junction. A voltage surge beyond the design level causes substantial increase in current and energy absorption, but not a catastrophic failure.

SMALL DISC VARISTORS

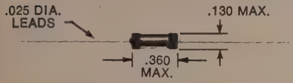
Special Products

TSR—Temperature Sensitive Resistor



A two terminal component that increases resistance linearly with temperature, the TSR is ideal for sensing, compensation, and control applications where temperature is the independent variable. In addition to its linearity and fast thermal response time, the TSR is ideally suited for high volume usage because of its low cost and specified part-to-part interchangeability.

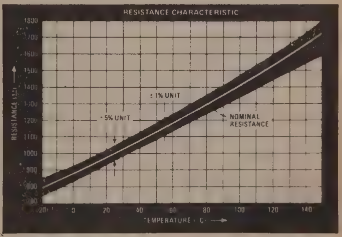
Specific applications for the TSR include:

- Temperature input for system control applications
- Temperature compensation for circuits or components subjected to wide ambient changes
- Electronic temperature indication
- Fluid level detection (using devices self-heating characteristics)
- Rate of rise detection

Construction—Nickel film on glass substrate, polymide-coated for environmental protection.

PERFORMANCE CHARACTERISTICS

Operating Temperature Range −55°C to +250°C
Resistance 1000Ω @ 25°C
Resistance Tolerance
±1% or ±5% @ 25°C
Temperature Coefficient of Resistance
+5900 ppm/°C



Part-to-Part Resistance Interchangeability

Note: Interchangeabilities are specified from −20° C to +150°C. However, the trends shown on the above graphs can typically be extrapolated over the full operating temperature range of −55°C to +250° C.

EEM PRODUCT INDEX

Need E-Rel Components?

We helped write the book!

Don't spin your wheels when you shift to established reliability from standard military specifications. Dale has the QPLs and the finished goods stock to save you valuable time.

Fast delivery on many styles

We're offering fast delivery on many established reliability part numbers for both wirewound and metal film resistors and wirewound trimmers. And we can deliver something else, too: *Experience.* Our work in the Minuteman program led to the formulation of the first specifications for established reliability resistors. Since then our materials improvement and failure rate documentation programs have become models in the industry. Today our AGS resistors have a proven failure rate of .000032% per 1,000 hours. *That's established reliability.* Put it to work for you now. Call 402-564-3131 (wirewound styles) or 402-371-0080 (film styles) or dial 800-645-9200 for the name of your Dale representative.

Temperature Cycling	±(.2%+.05Ω)	±(.15%+.05 Ω) ΔR	±.07% ΔR
Terminal Strength	±(.05%+.05Ω)	±(.01%+.05Ω)ΔR	±.00%ΔR
Salt Water	±(.25+.05Ω)	±(.15%+.05Ω) ΔR	±.03%ΔR
Life	±(.5%+.05Ω)	±(.25%+.05Ω)ΔR	±.09%ΔR
Shock	±(.1%+.05Ω)	±(.02%+.05Ω)ΔR	±.00%ΔR
Vibration	±(.1%+.05Ω)	±(.03%+.05Ω)ΔR	±.01%ΔR

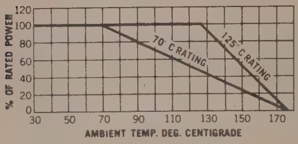
All ΔR figures shown are based on units with an initial tolerance of 1% and maximum operating temperature of 145°C.

DEPENDABLE DALE® RESISTORS

METAL FILM PRECISION RESISTORS, ESTABLISHED RELIABILITY

TYPE EMF

Failure Rate: Consult factory for current verified failure rate.



DERATING
Dale EMF resistors have an operating temperature range of −65° C to +175° C. They must be derated according to the curve above.

DALE TYPE	MIL. TYPE*	70° C RATING	125° C RATING	MAX. WT. (Grams)	MAX. WORKING VOLTAGE	RESISTANCE RANGE (OHMS) By T.C.**		
						T-1 (K)	T-2 (H)	T-9 (J)
EMF 50	RNR50	1/10 w	1/20 w	.11	200	49.9 to 100K	49.9 to 100K	49.9 to 100K
EMF 55	RNR55	1/8 w	1/10 w	.35	200	30.1 to 301K	49.9 to 200K	49.9 to 200K
EMF 60	RNR60	1/4 w	1/8 w	.45	250	24.9 to 1 Meg.	49.9 to 499K	49.9 to 499K
EMF 65	RNR65	1/2 w	1/4 w	.84	300	24.9 to 2 Meg.	49.9 to 1 Meg.	49.9 to 1 Meg.
EMF 70	RNR70	3/4 w	1/2 w	1.6	350	24.9 to 2.49 Meg.	24.9 to 1 Meg.	24.9 to 1 Meg.
EMF 75	–	–	1 w	4.4	500	24.9 to 4.07 Meg.	49.9 to 2.61 Meg.	49.9 to 2.61 Meg.

Standard Resistance Tolerances: .1% (B), .25%, .5% (D) and 1% (F).
*Available in corresponding RNC & RNN styles.
**Extended resistances above and below this range available as Non-MIL parts.

DIMENSIONS
See section on MF resistors. Dimensions on Types RNR50 thru RNR70 will conform to Types RN-50 thru RN-70.
Note: EMF 75 conforms to RN-75.

POWER RATING
Dale EMF power ratings are based on the following two conditions:

1. 0.5% maximum ΔR in 2000 hours load life.
2. 175° C maximum operating temperature.

WIREWOUND PRECISION RESISTORS, ESTABLISHED RELIABILITY

TYPE ARS*

Failure rate .000014% per 1000 hours at 50% rated power, 25°C ambient (60% confidence level). Failure defined as ΔR>0.5%.

TYPE AGS*

Miniature version of ARS Series with BeO core for optimum thermal conductivity, operational stability and increased reliability. Significantly smaller size. Failure rate .000044% per 1000 hours at 50% rated power, 25°C ambient (60% confidence level). Failure defined as ΔR>0.5%.

*Available with solderable and weldable leads. AGS-1, AGS-3 have molded construction. Non-inductive styles available.

DALE TYPE	MIL-R-39007 TYPE	POWER RATING (watts)	MIN. RES. (ohms)	MAX. RES. (ohms)	MAX. WORKING VOLTAGE	MAX. WEIGHT (grams)	DIM. A	DIM. B	DIM. C	DIM. D
ARS-2	RWR-71	2	0.1	16.2K	180	1.6	.812±.062	.187	1.5	.032

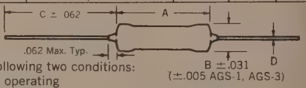
Tolerance: All established reliability resistors have a standard resistance tolerance of 1%.

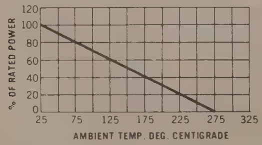


POWER RATING
Dale ARS and AGS power ratings are based on the following two conditions:

1. 0.5% maximum ΔR in 2000 hours load life.
2. 275°C maximum operating temperature.

TYPE ARH

Advanced design housed power wirewounds made on the same line and under the same high reliability standards as the ARS and AGS. Failure rate of .01% at 100% rated power.



DERATING
ARS, AGS, ARH
At high ambient temperatures, the derating curve above applies.

DALE TYPE	MIL-R-39009 TYPE	POWER RATING (watts)		RESISTANCE RANGES (ohms)		MAX. WORKING VOLTAGE	MAX. WT. GRAMS
		MTD.	FREE AIR	MIN.	MAX.		
ARH-5	RER-60	5	3	.1	4.12K	220	3
ARH-10	RER-65	10	6	.1	5.62K	340	8
ARH-25	RER-70	20	8	.1	12.1K	650	15
ARH-50	RER-75	30	10	1.0	39.2K	1400	32

Tolerance: All established reliability resistors have a standard resistance tolerance of 1%. Non-inductive versions also available.

DIMENSIONS: See section on RH resistors. Types ARH-5 thru 50 will correspond with RH-5 thru 50.

POWER RATING
Dale ARH resistor ratings are based on the following requirements:

1. 275° maximum internal hotspot temperature
2. 1% maximum ΔR in 2000 hour load life
3. Proper heat sink
   4x6x2x.040 aluminum chassis = ARH-5 and ARH-10
   5x7x2x.040 aluminum chassis = ARH-25 and ARH-50

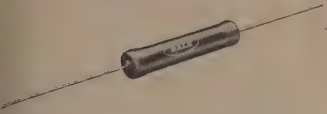
DEPENDABLE DALE® RESISTORS

WIREWOUND PRECISION RESISTORS, ESTABLISHED RELIABILITY

(M FAILURE RATE)



- **TYPE ESS** (Solderable Leads)
- **TYPE ESN*** (Solderable Leads, Non-Inductive)
- **TYPE ESW** (Weldable Leads)
- **TYPE EGS** (Solderable Leads)
- **TYPE EGN*** (Solderable Leads, Non-Inductive)
- **TYPE EGW** (Weldable Leads)

These styles meet the requirements of MIL-R-39007 Failure Rate Level M (1%/1000 hours). See ARS and AGS for lower failure rates.

POWER RATING

Power ratings are based on a maximum ΔR of .5% ±.05Ω when operated for 2,000 hours at rated power and at an ambient of +25°C.

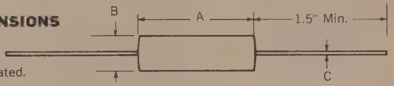
Tolerance:
All established reliability resistors have a standard resistance tolerance of 1%.

*Molded models. Others conformal coated.

DIMENSIONS



- **TYPE ERH** (Inductive Winding)
- **TYPE ENH** (Non-inductive Winding)

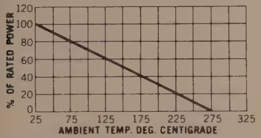
Meet the requirements of MIL-R-39009 Failure Rate Level M (1%/1000 hours). See ARH for lower failure rates.

POWER RATING

Dale ERH and ENH resistor ratings are based on the following requirements:

1. 275° C maximum internal hotspot temperature
2. 1% maximum ΔR in 2000 hour load life
3. Proper heat sink

4x6x2x.040 aluminum chassis = ERH-5 & ERH-10
5x7x2x.040 aluminum chassis = ERH-25 & ERH-50



DERATING

ESS, ESW, EGS, EGW, ERH, ENH
At high ambient temperatures, the derating curve above applies.

Tolerance: All established reliability resistors have a standard resistance tolerance of 1%.

Figures in parentheses indicate wattage printed on these resistors. They can be rated at 7.5 and 12.5 watts respectively, but will be printed with these higher ratings only upon request.

DIMENSIONS

See section on RH resistors. Types ENH and ERH-5 thru 50 will correspond with RH-5 thru 50.

DOCUMENTATION

Qualification, acceptance and failure-rate maintenance test data is retained by Dale and is available upon request. Lot traceability and identification data is maintained by Dale for 5 years.

RELIABILITY PROGRAMS

The established reliability series are the result of an extensive reliability program at Dale Electronics which includes basic design and materials improvement, special production and test facilities, and trained, reliability-oriented personnel. A separate program group has been set up to provide customer service on established reliability programs, and the facilities and know-how of the Dale established reliability organization can be directed toward the development of reliability programs for specific user requirements. Inquiries may be directed to your local Dale representative or to the factory.

DEPENDABLE DALE® RESISTORS

WIREWOUND PRECISION RESISTORS, SILICONE COATED OR MOLDED

(Available with Weldable Leads)

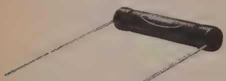
■ TYPE RS

Meets applicable requirements of MIL-R-26E, MIL-R-26C and MIL-R-23379. Non-inductive (NS) styles available.

■ TYPE LVR

Combines extremely low resistance values with high power and low T.C. Molded body, axial leads.

■ TYPE RLS



Radial leads for printed circuit board mounting. Meets applicable requirements of MIL-R-26E. Non-inductive (NLS) styles available.

POWER RATINGS RS, RLS, G SERIES

These Series have two power ratings, depending on operating temperature and stability requirements.

CHARACTERISTIC U: 1. 275°C maximum hotspot temperature
2. .5% maximum ΔR in 2000 hour load life

CHARACTERISTIC V: 1. 350°C maximum hotspot temperature
2. 3% maximum ΔR in 2000 hour load life

DERATING RS, RLS, G, LVR

RS, RLS and G coated resistors have an operating temperature range of −55°C to +350°C. Dale RS and LVR molded resistors have an operating temperature range of −55°C to +275°C. They must be derated at high ambient temperatures according to the curves below.

POWER RATING
Power ratings of Dale G resistors are 1.4 to 4 times higher than those of conventional wirewound resistors of equivalent size.

Stability When Dale G resistors are operated at the same ratings (Char. U) as conventional Dale RS resistors of equivalent size, the shift in resistance is 50% or less than that of the RS.

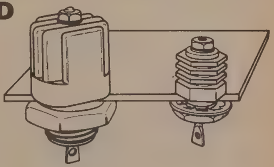
For additional power and derating information, see section on RS resistors.

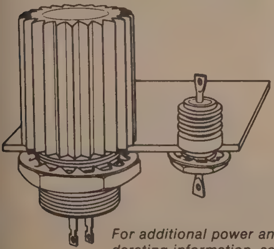
WIREWOUND POWER RESISTORS, HEAT SINK ENCASED

■ TYPE PH

TWO TERMINAL CONFIGURATIONS (PH-10-1, PH-25, PH-50 and PH-100).
Thru chassis mounting—two connections required on one or both sides of panel. Meet electrical and environmental requirements of MIL-R-18546.

SINGLE TERMINATION, CHASSIS GROUND (PH-10-5 and PH-25-8).
Speeds assembly time as only one connection is required. Often utilized as a drive line resistor in a high speed core memory system using a series termination technique. Non-inductive windings have low reactance properties giving exceptionally fast cycle time.





For additional power and derating information, see section on RH resistors

DEPENDABLE DALE® RESISTORS

WIREWOUND POWER RESISTORS, HEAT SINK ENCASED

Patented design. Mount to the chassis. Provide high power and precision tolerance in a variety of sizes, mounting and terminal configurations. RH and HG types exceed MIL-R-18546. Non-inductive NH styles available.

■ TYPE RH

5 through 250 watts. Bonus power dissipation ability within MIL-R-18546 size.

■ TYPE HG

Beryllium oxide core for optimum heat dissipation. Doubles Mil. Spec. power at no increase in size. Exceptional stability at mil. levels.

*Rating is based on chassis mounting area and stability.

**NOTE: Figures in parentheses on RH-5 and RH-10 indicate wattage printed on these resistors. New construction allows them to be rated at 7.5 and 12.5 watts—but they will be printed with these higher ratings only upon customer request.

†A weight increase of 10% should be allowed for non-inductive styles.

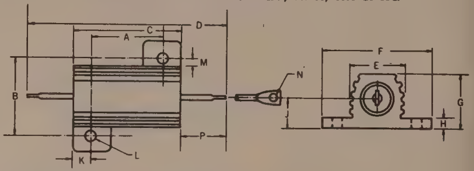
††Consult factory for values below 1 ohm and for special T.C. requirements.

POWER RATING RH, HG, PH TYPES

Dale housed resistor ratings are based on the following requirements:

1. 275°C maximum internal hotspot temperature
2. 1% maximum ΔR in 1000 hour load life for RH-5, 10, 25, 50; PH-10, 25, 50. 3% maximum ΔR in 1000 hour load life for RH-100, 250; PH-100.
3. Proper heat sink.
   4x6x2x.040 aluminum chassis = RH-5, 10; HG-5, 10; PH-10
   5x7x2x.040 aluminum chassis = RH-25; HG-25, 50; PH-25
   12x12x.059 aluminum panel = RH-50
   12x12x.125 aluminum panel = RH-100, 250; PH-50, 100

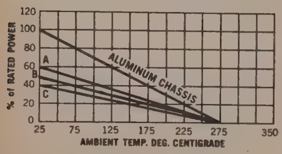
5 THRU 50 WATT MODELS, ARH, RH & HG



DERATING

Dale housed resistors have an operating temperature range of −55°C to +275°C. Derating is required for reduced chassis mounting area and for high ambient temperatures. The following curves apply to operation of unmounted resistors:

A = RH-5, 10
B = RH-25; PH-10, 25
C = RH-50, 100, 250; PH-50, 100; HG-5, 10, 25, 50



DIMENSIONS—5 thru 50 WATT MODELS—ARH, ERH, RH & HG

DEPENDABLE DALE® RESISTORS

WIREWOUND PRECISION RESISTORS, BOBBIN TYPE *(Available with Weldable Leads)*

Non-inductive precision resistors. Epoxy molded for high dielectric strength and complete environmental protection. Meet applicable requirements of MIL-R-93D.

■ TYPE WWA

Patented design insures high stability. Special tolerances and matching available.

■ TYPE MWA

Subminiature size retains Dale's unique bobbin-type design and high protection molding coating.

DALE TYPE	MIL-R-93 TYPE	POWER RATING (WATTS)	MINIMUM RESISTANCE RANGE (OHMS)*					MAXIMUM RESISTANCE (OHMS) ALL TOLERANCES	MAXIMUM WORKING VOLTAGE	MAXIMUM WEIGHT (GRAMS)

WWA-416	–	1	10	3	1	.2	.1	23 Meg.	1400	15.5

*Consult factory for tolerances below .05%.

†Although there is no direct mil. model of the same physical size, the Dale type will meet the electrical and environmental requirements of MIL-R-93.

SPECIAL MODIFICATIONS

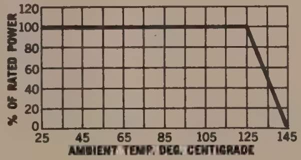
- ■ Special tolerances are available to as low as .005%.
- ■ Resistors can be matched to a tolerance of .001%.
- ■ Special T.C.'s are available to ±2 ppm/° C over a limited temperature range.
- ■ T.C.'s can be matched to an accuracy of 1 ppm/° C.

POWER RATING

MWA, WWA and WWP power ratings correspond to MIL-R-93 ratings and are based on .5% maximum ΔR in 1500 hours load life. For commercial applications, power ratings may be doubled.

DERATING

Dale MWA, WWA and WWP resistors have an operating temperature range of −55° C to +145° C. Derating is required for temperatures above 125° C. The curve at right applies.



DIMENSIONS

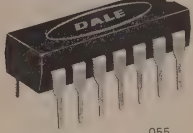
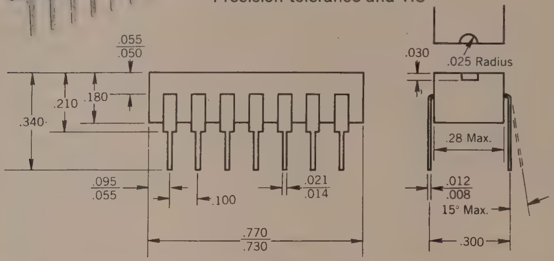
DEPENDABLE DALE® RESISTORS

WIREWOUND DUAL-IN-LINE PACKAGE

■ TYPE WDP



- Designed for automatic insertion
- Up to 7 resistors in a 14-pin package
- Optimum heat dissipation in small package
- High temperature stability
- Precision tolerance and T.C



SPECIFICATIONS

Electrical

Power Rating: 3.5 watts (up to .5 watts/resistor)

Resistance Range: 1Ω to 800Ω per resistor

Tolerance: ±0.1% to ±5.0%

Temperature Coefficient: ±20 PPM/° C (7Ω to 800Ω)
±50 PPM/° C (1Ω to 6.9Ω)

Tolerance Match: .05%

Temperature Coefficient Match: To 5 PPM/° C, depending on resistance values

Operating Temperature: −65° C to +275° C

Dielectric Strength: 500 VAC

Insulation Resistance: 1000 Megohms minimum dry, 100 Megohms minimum after moisture test.

Material

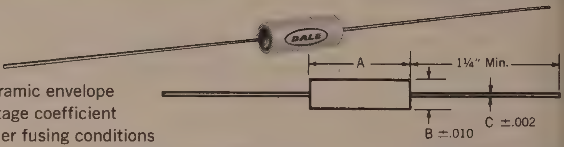
Package: Silicone molded

Leads: KOVAR

CUSTOM FUSE RESISTORS

■ TYPE CFR

- Performs function of resistor and series fuse
- Completely welded construction hermetically sealed in ceramic envelope
- Low temperature coefficient with negligible noise and voltage coefficient
- Predictable fusing times with no flaming or distortion under fusing conditions
- Commercial type fuse resistors also available



SPECIFICATIONS

Electrical

Tolerance: 3%, 5% and 10% standard. 1% available for some applications

Dielectric Strength: 750 VAC 1/4 watt thru 1 watt; 1000 VAC all others

Insulation Resistance: 10,000 Megohms minimum dry

Temperature Coefficient: ±90 PPM/°C below 1 ohm; ±50 PPM/°C 1 ohm thru 9.9 ohms; ±30 PPM/°C 10 ohms and up

Operating Temperature: −55°C to +275°C

Fusing Times: 1 millisecond to 1 second depending upon other parameters

Minimum Fusing Current: Approximately 4 times the continuous operating current obtainable on some designs. Larger ratios produce better designs.

Mechanical

Terminal Strength: 5 lb. pull test = 1/4 watt thru 1 watt; 10 lb. pull test = all others

Solderability: Continuous satisfactory coverage when tested in accordance with MIL-R-26E

NOMINAL CONTINUOUS POWER RATING*	VALUE RANGE	DIMENSIONS		
		"A" Length	"B" Dia.	"C" Lead Dia.
1/4 W	0.1Ω to 1.2KΩ	.437 ± .020	.155	.020
1/2 W	0.1Ω to 1.6KΩ	.437 ± .020	.155	.020
3/4 W	0.2Ω to 2.5KΩ	.437 ± .020	.155	.020
1-1/2 W	0.3Ω to 5.3KΩ	.640 ± .031	.243	.032
2-1/2 W	0.45Ω to 7.4KΩ	.750 ± .031	.250	.032

*Actual power rating will depend on fusing, stability, value and other design requirements

ORDERING INFORMATION *Please include the following information:*

1. Operating wattage or current, ambient temperature and required resistance stability, (% ΔR/1000 hours).
2. Fusing wattage or current and maximum "blow" time. Also minimum "blow" time, if applicable.
3. Nominal resistance and maximum allowable resistance tolerance, (5% to 10% preferred).
4. Maximum allowable physical size.
5. Voltage to be interrupted.
6. Frequency of power source, wave form, and a brief description of your application.

NON-STANDARD RESISTORS TO YOUR SPECIFICATION

Dale is the industry's acknowledged leader in designing and supplying non-standard resistors. From the thousands of designs in our engineering files, we can select proven methods of solving your specific requirements...faster and at a lower cost. Our capabilities include:

- ■ Extended resistance ranges
- ■ Low reactance
- ■ Very high or very low T.C.
- ■ Special tolerances
- ■ Low noise
- ■ Match of T.C., tolerance, resistance ratio
- ■ Special packaging

For assistance in obtaining non-standard resistors, call:

402—564-3131 • Columbus, Nebraska • DALE WIREWOUND RESISTORS
402—371-0080 • Norfolk, Nebraska • DALE METAL FILM RESISTORS

DEPENDABLE DALE® RESISTORS

INDUSTRIAL WIREWOUND POWER RESISTORS, SILICONE COATED

Dale's silicone-coated industrial wirewound resistors assure maintenance of tolerance and T.C. without compromise in mechanical and chemical protection.

This complete line, except for CW types, also available with vitreous enamel coating. Contact factory for details.

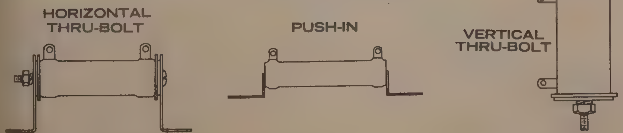
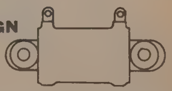
HLW Tubular	General application where terminal wires are required for direct electrical connection	None	3-20 watts	.1 ohm to 80K ohms	O.D. 13/64 to 7/16″ Length 7/16″ to 2″	Lugs with terminal wires	Terminals, thru-bolt or push-in bracket	±5% (10% below 1ohm)
HLZ Edge-wound	For heavy duty requirements where space is at a premium. High thermal capacity.	None	35-375 watts	.05 ohm to 32 ohms	O.D. 9/16 to 1-1/8″ Length 2 to 10-1/2″	Lugs	Push-in bracket or thru-bolt	±10%

MOUNTING BRACKETS for TUBULAR STYLES



EXCLUSIVE BRACKET DESIGN FOR MINIATURE FLAT STYLE



Mounting strap fits snugly through core and is bound tightly against unit by two eccentric spacers. Eliminates expensive cements and improves heat transfer and power handling capabilities.

DEPENDABLE DALE® RESISTORS

TYPE CP

- Fireproof inorganic construction
- Special inorganic potting compound provides high thermal conductivity.
- Superior moisture resistance

Construction:
Resistance wire is high quality, premium grade wound onto a woven fiberglass core. Terminals are tinned copper crimped to the wound core with a special brass alloy.

Tolerance: ±10% standard. ±5% also available.
Operating Temperature: −55° C to +275° C.
Terminal Strength: 5 lbs.

Ordering Information:

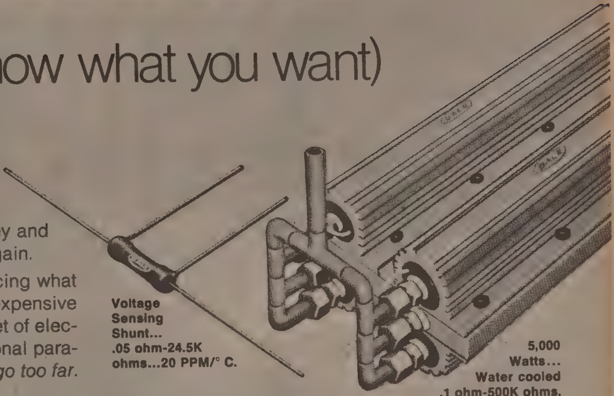
When ordering, please specify resistor body length, watts/inch, resistance and tolerance.

Example: A 1½" unit, 4 watts per inch; 350 ohms, ±10% radial lead unit is designated as shown.

1. Resistor type
2. Core diameter designation
3. Overall resistor body length
4. Resistance
5. Tolerance

How to cut the cost of special resistors

(even if you don't know what you want)



Voltage Sensing Shunt... .05 ohm-24.5K ohms...20 PPM/° C.

5,000 Watts... Water cooled .1 ohm-500K ohms, 0.5%-5% tol.

Project costs don't have to escalate when you find you can't use a standard resistor. There are positive ways you can save money and time—and even come out ahead in the bargain.

You can start cutting project costs by reducing what we call "visualization loss". This is the expensive extra time required to figure out an exact set of electrical, physical, environmental and dimensional parameters for the special part you need. *Don't go too far.* Especially don't wait until you're completely bogged down before you ask Dale for help. In electrical terms, we've long since figured out practical ways to deliver resistance as low as .001 ohm... tolerance as low as .01%...TC as low as ±5 ppm and power just as high and as stable as you want it to be. And we can put your non-standard electrical parameters in unique packages that are one part sophistication and one part midwestern ingenuity. Every day we're showing companies how they can bend, squeeze, mill, tap, bury and interconnect resistors for special purposes. We even put in plumbing, when required.

Your non-standard resistor may only need a different kind of lead or it may look like a Rube Goldberg nightmare. Either way, you'll find Dale is unique among resistor suppliers in the ability to help you quickly visualize what you need...and to deliver a prototype with a minimum of design lag. We've already designed and built nearly 5,000 special resistors—so it's quite possible we've already blueprinted the design you need.

Call us. You'll be glad to find someone is working to make the basics better.

Space-saving P.C. board module containing 3 non-inductive resistors. (Far left)

◄ Network with 16 quick couple connections containing 12 resistors from .025 ohm 50 watts to .1 ohm 10 watts.

High Pulse Wattage ► railway safety resistor. Special housing for underground use.

POWER RATING
Dale MC and DC power ratings are based on 1% maximum ΔR in 1000 hours load life at 70° C.

DERATING
Dale MC and DC resistors have an operating temperature range of –55° C to +165° C. They must be derated at high ambient temperatures from 100% power at 70° C to 0% power at +165° C.

DEPENDABLE DALE® RESISTORS

PRECISION METAL FILM RESISTORS *(Available with Weldable Leads)*

Vacuum-deposited metal film resistors. Good R.F. characteristics. Low noise level. Wide choice of tolerances, T.C.'s and resistance.

TYPE M:
Standard values to 100 Meg. Special order to 300 Meg. See following page.

■ TYPE MF, LMF, HMF

Epoxy molded. Meets MIL-R-10509.

■ TYPE MFF, CMF, LFF, HFF

Epoxy conformal coated.
Type CMF meets MIL-R-10509 and MIL-R-22684.

■ TYPE D

Molded in aluminum housing to utilize heat sink effect of chassis. Resistance ranges from 24.9Ω to 2.6 Meg., with power ratings of 4, 8 and 12 watts.

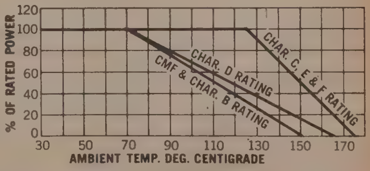
POWER RATING

Dale metal film resistors have power ratings depending on operating temperatures of 70° C and 125° C as indicated above. All are based on a maximum ΔR of .5% in 1000 hour load life.

DERATING

Dale metal film resistors have an operating temperature range beginning at −65° C. They must be derated according to the curves at right.



DEPENDABLE DALE® RESISTORS

MINIATURE OXIDES TO MIL-R-22684B (Molded-Flameproof)

Metal oxide resistors are superior for requirements involving load life with extremely high reliability and stability—up to 100,000 hours or more. They have conclusively outperformed other resistor types under environmental conditions of varying humidities and temperatures or where prolonged operation in a high dissipation and/or ambient temperature is necessary. Their ability to withstand extreme overloads make them ideal for pulse applications where extremely high peak voltages are involved.

HIGH VOLTAGE OXIDE RESISTORS

High Voltage oxide resistors with stability and reliability in high voltage and pulse applications far exceeding that obtained from components previously available. Continuous voltage stress up to 8,000 volts per inch can be applied. In addition, voltage pulses up to 3-1/2 times the magnitude of the continuous rating may be applied without deterioration of the element.

Industrial grade high voltage styles also available. Ask for TO Types F53D, F535D and F54D.

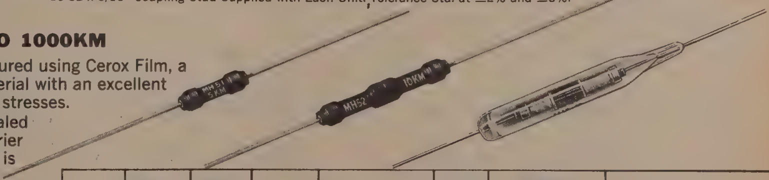
ULTRA HIGH VALUES–TO 1000KM

High Value resistors are manufactured using Cerox Film, a highly stable thick resistance material with an excellent voltage coefficient at high voltage stresses. **Type M51 resistors** are vacuum sealed in a glass envelope to which a barrier coating of special silicone lacquer is applied to minimize the effects of surface moisture or contamination. **Types MH51 and MH52** are encapsulated in a sleeve of irradiated polyolefin heat shrunk for intimate contact with the capped body.



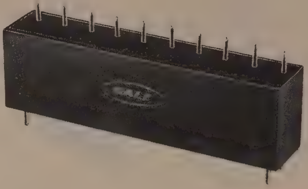
TYPE	WATTS @ 40°C	MAX. VOLT	LENGTH	DIAMETER	LEAD DIA.	RESISTANCE RANGE	TOLERANCE
MH51	1/4	1500	.50″	.140″ ± .010″	.028″	30M- 5KM	5%, 10%, 20%
MH52	1/2	3000	.88″	.140″ ± .020″	.028″	60M-10KM	1%, 2%, 5%, 10%, 20%
M51	1/2	500	1.88″	.216″ ± .006″	.020″	10M-1000KM	1%, 2%, 5%, 10%, 20%

DEPENDABLE DALE® ATTENUATORS

TYPE 62-00
MULTIPLE ATTENUATORS

FEATURES

- Units contain 2, 3, 4 or 5 attenuator pads.
- Suitable for direct insertion into printed circuit boards.
- Balanced square pads and unbalanced pads are available.



CIRCUIT DESIGN: The individual pads for the input and output form a wiring field on the upper surface. By the use of appropriate wire links, any combination of the pads may be brought into circuit. The choice of a Binary Series of pads enables a range of attenuation from the value of the lowest pad to the sum of all pads, in steps of the lowest value to be selected. For example: a unit containing 1/2, 1, 2 and 4 dB provides 0 to 7½ dB in 1/2 dB steps.

CHARACTERISTIC IMPEDANCE: 75Ω and 600Ω are standard. Other values to special order.

NUMBER OF PADS: 2, 3, 4 or 5

RANGE OF INSERTION LOSS: Standard values of 0.25, 0.5, 1, 2, 4, 6, 8 and 16 dB per pad from the range of 0.1 to 40 dB.

DEPENDABLE DALE® ATTENUATORS

GENERAL INFORMATION

STANDARD IMPEDANCE VALUES: 75Ω, 140Ω and 600Ω. For special requirements, pads can be designed to provide any value of characteristic impedance in a very wide range.

IMPEDANCE ACCURACY: The impedance match is such that when the output terminals are closed by a resistor of the nominal impedance, the return loss against the nominal impedance is greater than 35 dB.

RANGE OF ATTENUATION: Pads can be supplied with any value of insertion loss between 0.1 dB and 40 dB (or between 0.01 neper and 4 nepers).

CONFIGURATION: Available in π, T, balanced π or square and balanced T or H. Units are also available giving change of impedance at minimum insertion loss both for balanced and unbalanced lines.

TERMINAL ARRANGEMENTS: Standard styles are shown in the drawings. These provide for the alternatives of solder lugs, wire leads for conventional wiring and leads for printed wiring.

FREQUENCY RANGE: Frequency range depends on the deviation that can be permitted from the nominal attenuation. This deviation will vary with different values of impedance and insertion loss. For example, 8 dB unbalanced pads of 75 Ω characteristic impedance may be used at any frequency up to 12 Mc and the insertion loss will not deviate by more than 0:2 dB from the value measured at DC. Information on the performance of any pads at high frequencies can be supplied on request.

RATING: Individual elements employed by these networks are rated at 250 milliwatts unless otherwise stated.

TEMPERATURE RANGE: −40°C to +85°C

BALANCE: In all types of balanced pads, a measurement of resistance made between one input terminal and either output terminal will not differ by more than 3% from a measurement made between the other two terminals.

STABILITY: Under normal ambient conditions, the value of attenuation will not change by more than 0.05 dB. The change after prolonged exposure to humid conditions will not exceed 0.1 dB.

STANDARD TOLERANCE OF INSERTION LOSS: The tolerance of the insertion loss is dependent on the nominal value of insertion loss in accordance with the following table.

Nominal Value of Insertion Loss (dB)	Permissable Departure from Nominal Loss (dB)
Less than 0.25	±0.03
0.25 or more but less than 0.5	±0.05
0.5 or more but less than 2.0	±0.1
2.0 or more but less than 15	±0.2
15 or more	±0.25

No. 6 U
(Change of impedance. Balanced)

Standard housings and terminal arrangements are shown here. Configuration of pads, characteristic impedance and insertion loss can be made to customer requirements. The range includes both single and multiple section pads.

When attenuator pads are made from discrete components, film resistors of appropriate stability are used. They are taken from the Dale film resistor production line before terminal wires are fitted. Interconnections in the various attenuators are then made directly from the end caps of the resistors to the terminal tags. Intermediate connections are kept to a minimum and the possibility of dry joints is eliminated.

Pads are encapsulated in resin or encased in a plastic molding which protects them from damage and insures that, under the most severe environmental conditions, there is no change in the electrical properties.

Resistance values are selected to give the correct matching impedance for the pad and to provide an insertion loss well inside the tolerance limits. Attenuators cannot be manufactured to the necessary degree of accuracy by using resistors of preferred values from E.I.A. Series, and it is essential to employ resistors made to the design calculated value and the appropriate close tolerance.

The reactance of discrete film resistors is low and this insures that the attenuation of the pad is constant over a wide range of frequencies. In some configurations and attenuation values, the insertion loss is constant from DC up to 10 MHz. Relative positioning of resistors is carefully maintained so that characteristic behavior at various frequencies is consistent between different units.

Attenuators are housed in plastic cases made to close dimensional tolerances. The marking is well cured, providing an indelible identification. Insulation between the elements and the surface of the case is maintained at a value in excess of 10^9 ohms at 500 volts DC. Cases are available in different colors and may be used to identify the impedance or other characteristic of the assembly.

Standard terminals include solder lugs and wire leads for conventional wiring or for direct insertion into printed circuit boards. Other terminal arrangements can be provided to suit particular applications.

Resistance functions ...packaged to go!

Thirty watts and 10 KVDC from a discrete thin film network? Sure! It's all in a day's work for Dale. We're specialists in tailoring the advantages of thin (metal or carbon) discrete film resistors to meet your unique and urgent needs. Dale discrete thin film network capabilities range from simple voltage dividers to complex binary D/A ladders with accuracy to 1/2 LSB.

Packaging can vary from coated or molded, single or dual in-line to custom shapes and enclosures for unusual space and/or heat dissipation requirements. Resistor pairs or sets matched for ratio, T.C. tracking and/or tolerance can also be packaged to go. When what you need isn't in the catalog, call Dale. We cater to special needs. For immediate help with special film resistors, call **402-371-0080**

THICK FILM and DISCRETE NETWORKS

TYPE	BASIC DESCRIPTION	NO. OF PINS	CONDENSED SPECIFICATIONS
CDP 	DIP style with flame retardant coating. Also available in double width style.	14, 16, 18 (up to 24 in double width)	**Power Rating:** 1/8 watt maximum/resistor; maximum/package = 1-1/4 watts **Resistance Range:** 10Ω to 1 Meg. **Tolerance:** ±2%, 5%, 10% **T.C.:** ±250 PPM/° C
CDM 	DIP style with flat ceramic top. Epoxy coating. Suitable for automatic insertion. Designed to meet MIL-R-83401.	14, 16, 18	**Power Rating:** .10 watt maximum/resistor; maximum/package = 1-1/4 watts **Resistance Range:** 10Ω to 1.0 Meg. **Tolerance:** ±1%, 2%, 5%, 10% **T.C.:** ±300 PPM/° C
LDP 	DIP style with flat ceramic top. Epoxy coating. Suitable for automatic insertion. ***Complete specifications on following pages.***	14, 16, 18	**Power Rating:** .10 watt maximum/resistor; maximum/package = 1-1/4 watts **Resistance Range:** 10Ω to 1.0 Meg. **Tolerance:** ±1%, 2%, 5%, 10% **T.C.:** ±250 PPM/°C
SDM	DIP style with sandwich-type construction. Designed to meet MIL-R-83401. ***Complete specifications on following pages.***	14, 16, 18	**Power Rating:** 1/10 watt maximum/resistor; maximum/package = 1-1/4 watts **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, 2%, 5%, 10% **T.C.:** ±300 PPM/° C
SDP	DIP style with sandwich-type construction. ***Complete specifications on following pages.***	14, 16, 18	**Power Rating:** 1/10 watt maximum/resistor; maximum/package = 1-1/4 watts **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, 2%, 5%, 10% **T.C.:** ±250 PPM/°C
CSP 	Single in-line package with flame retardant epoxy coating. Built-in standoffs. Lead spacings .100" and .125". ***Complete specifications on following pages.***	4, 6, 8, 10	**Power Rating:** 1/8 watt maximum/resistor; maximum/package = 1-1/4 watts **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, 2%, 5%, 10%, 20% **T.C.:** ±250 PPM/° C
TKR-36 	Binary ladder network designed for precision digital to analog conversion. Double-width DIP style package with flame retardant epoxy coating.	20	**Resistance Value:** 1K, 5K, 10K, 20K **Accuracy:** ±1/2, 1, 2 LSB **Tolerance:** ±5% typical
DFP 	Compact, thick film flat pack. Ceramic enclosure. Two internal configurations.	14, 16	**Power Rating:** .2 watt or .1 watt/resistor, depending on configuration; maximum/package = .65 watt **Resistance Range:** 20Ω to 1 Meg., depending on tolerance **Tolerance:** ±2%, 5%, 10%, 20% **T.C.:** ±250 PPM/° C
SPR-ARO 	DIP style with up to 11 discrete resistive elements. For use where tight tolerance and low temperature coefficient are required. Meets functional requirements of MIL-R-10509 and MIL-R-55182.	14, 16	**Power Rating:** .1 watt maximum/resistor; maximum/package = 1 watt **Resistance Range:** 10Ω to 400KΩ **Tolerance:** ±.05% to 5% **T.C.:** 10 PPM/° C to 200 PPM/° C

CHIP RESISTORS

RC 	Thick film chip resistor with choice of sizes to allow wide design flexibility in hybrid circuitry. ***Complete specifications on following pages.***	None	**Power Rating:** 75, 100, 150 and 300 mw **Resistance Range:** 100Ω to 500KΩ **Tolerance:** ±1%, 2%, 5%, 10%, 20% **T.C.:** ±250 PPM/°C

SPECIALTY NETWORKS

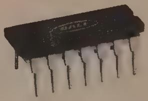
	Discrete precision wirewound and film resistors packaged to your requirements and providing broad flexibility in meeting electrical and physical requirements. ***Complete specifications on following pages.***

DEPENDABLE DALE® NETWORKS

TYPE LDP (Sandwich) THICK FILM PACKAGE

FEATURES

- Compact resistor circuits
- Suitable for automatic insertion
- Eliminates handling individual resistors



SPECIFICATIONS

ELECTRICAL

Resistance Range: 10Ω to 1 Megohm

Temperature Coefficient: ±250PPM/°C over a temperature range of −55°C to +150°C. (+25°C reference.)

Operating Voltage: 75 VDC typical (2 volts max. per .001″ of resistor length).

Power Rating: At 70°C, 1/8 watt maximum/resistor. Total package rating: LDP-14, 1 watt; LDP-16, 1-1/8 watt; LDP-18, 1-1/4 watt.

Ratio Matching: 0.5% available on special request.

T. C. Tracking: 50PPM/°C available on special request...in resistors of similar geometry and value.

Voltage Coefficient: As low as ±15PPM/V, depending on resistor geometry and value.

Noise: Depends on resistor geometry and value.

Operating Temp. Range: −55°C to +150°C.

MATERIAL

Element: Fused, thick film compositions

Substrate: High purity 95% minimum alumina

Terminals: Tin-plated Alloy 42 or equivalent

Coating Material: Epoxy between ceramic sandwich

DERATING

Dale thick film dual in-line sandwich packages have an operating temperature range of −55°C to +150°C. They should be derated at high ambient temperatures according to the curve at right.

Note: Power rating based on still air hotspot mounted on 1/16″ P.C. board at 70°C ambient. See derating curve between 25°C and 70°C.

5. **Tolerance:** F = ±1%, G = ±2%, J = ±5%, K = ±10%, M = ±20%

EXAMPLE:
SDM14-182G-01 = a thick film resistor with 14 pins with a resistance value of 1800 ohms, tolerance of 2% and the resistor configuration identified as –01 in the drawing above.

DEPENDABLE DALE® NETWORKS

TYPE SDP (Sandwich) THICK FILM PACKAGE

FEATURES

- Compact resistor circuits
- Dual in-lines
- Eliminates handling individual resistors

SPECIFICATIONS

ELECTRICAL

Resistance Range: 10Ω to 1 Meg.

Temperature Coefficient: ±250 PPM/°C over a temperature range of −55°C to +150°C (+25°C reference.)

Operating Voltage: 75 VDC typical (2 volts max. per .001″ of resistor length).

Power Rating: At 70°C, 1/8 watt maximum/resistor. Total package rating: SDP-14, 1-1/8 watt; SDP-16, 1-1/4 watt; SDP-18, 1-1/2 watt.

Ratio Matching: 0.5% available on special request.

T. C. Tracking: 50 PPM/°C available on special request... in resistors of similar geometry and value.

Voltage Coefficient: As low as ±15 PPM/V, depending on resistor geometry and value.

Noise: Depends on resistor geometry and value.

Operating Temp. Range: −55°C to +150°C

MATERIAL

Element: Fused, thick film compositions

Substrate: High purity 95% minimum alumina

Terminals: Tin-plated Alloy 42 or equivalent

Coating Material: None

DERATING

Dale thick film dual in-line sandwich packages have an operating temperature range of −55°C to +150°C. They should be derated at high ambient temperatures according to the curve at right.

Note: Power rating based on still air hotspot mounted on 1/16″ P.C. board at 70°C ambient. See derating curve between 25°C and 70°C.

6. **Tolerance:** **F** = ±1%, **G** = ±2%, **J** = ±5%, **K** = ±10%, **M** = ±20%

EXAMPLE:
CSP 04 E-01-100 G = a single in-line thick film resistor network with 4 terminals on .100" centers, -01 configuration, resistance of 10 ohms and tolerance of ±2%.

DEPENDABLE DALE® MICROCIRCUITS

THICK FILM MICROCIRCUITS

FEATURES

- Custom design allows you to specify design tolerance, packaging, environmental requirements.
- Engineering assistance for production design.
- Specialists in design of networks for high power dissipation.
- Standard dual in-line packaging or modular packaging with screened silicone coating and choice of lead types.
- Wide choice of pre-conditioning options.

CIRCUIT MATERIALS AVAILABLE

Substrates: Alumina

Terminations: Wire Leads, Ribbon Leads or Solder Pads

Conductors and Land Areas: Platinum Gold, Palladium Gold, Gold, Silver, Palladium Silver

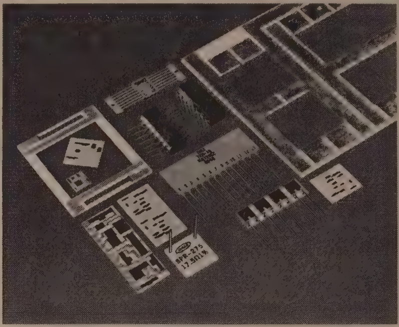
Crossovers: As required

Packaging: Dual in-line, single in-line, custom

Coating: Screened Silicone, epoxy, custom

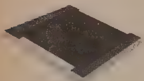
PRECONDITIONING OPTIONS

- Power Aging
- Temperature Cycling
- Temperature & Power
- Temperature Aging
- Short Time Overload
- Thermal Shock
- X-Ray



To obtain prototypes for your circuit...
contact your Dale representative or phone or write Dale at the address below. Dale's Microcircuit Department is geared to assist you with every phase of design—providing the shortest possible leadtime between concept and production ready component.

THICK FILM CHIP RESISTOR



Resistance Range: 100Ω to 500K. 10Ω to 5 Meg. by special order

Tolerance: ±20%, ±10%, ±5%, ±2%, ±1%

Temp. Coefficient: ±200 PPM (−55° C to +150° C) +25° C Reference

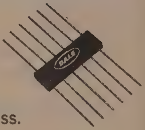
Operating Voltage: 50 to 125 VDC depending on size.

PHYSICAL	SIZE CODE	POWER RATING
.050 x .050	550	75mw
.050 x .075	575	100mw
.050 x .100	5100	150mw
.050 x .150	5150	300mw

WIREWOUND and FILM PACKAGED NETWORKS

FEATURES

- Choice of linear wirewound, bobbin wirewound, metal film, carbon film or cermet elements
- Less components to stock or handle
- Reduced inspection time
- Ease of assembly
- Matched resistors cannot be mixed or lost
- Complete environmental protection
- Dale networks meet or exceed requirements of MIL-R-26, MIL-R-93 or MIL-R-10509, depending on type of element used
- Packaged to meet your requirements



LADDER NETWORKS

- **Output Accuracy:** ±.05% full scale accuracy or ± 1/2 least significant bit, whichever is less.
- **Output Variation with Temp.:** ± .1% full scale accuracy or ± 1 least significant bit, whichever is less.
- **Operating Temp. Range** (For Accuracies Specified Above): −55° C to +70° C (Film Type) −55° C to +125° C (Wirewound Type).
- **Input Resistance** (All inputs connected): 1KΩ to 500KΩ
- **Output Resistance** (All inputs grounded): 250Ω to 125KΩ
- **Insulation Resistance:** 100 Megohms minimum.
- **Terminals:** Solderable or weldable wire leads.
- **Packaging:** Epoxy or Silicone resin potting. Transfer molded, Can be encapsulated. Other types of special packaging available to meet your requirements.

GENERAL RESISTOR ELECTRICAL CAPABILITIES

FEATURES:

- Tubular construction provides excellent heat dissipation.
- Welded terminals and termination guarantees positive electrical connections.
- Balanced thermal expansion between core, wire and high temperature vitreous enamel assures reliable performance.
- Long term stability results from firing at temperatures exceeding 1000°F.
- Tinned terminals provide reliable solder or mechanical connections.
- Uniform winding and coating provides uniform heat dissipation and excellent appearance.
- Available in Non-inductive winding.
- Supplied with 1½″ solder leads.
- Other hardware available for mounting. See Hardware Section.

SPECIFICATIONS:

- Resistance tolerance ±5% . . . closer tolerance available.
- Temperature coefficient ±100 PPM . . . Lower TC available.
- When dual wattages are shown . . .
  - Lower wattages have a maximum "hotspot" of 275°C.
  - Higher wattages have a maximum "hotspot" of 350°C.
- Available resistance range 0.5 ohm to 100,000 ohm.
- Meets or exceeds applicable specifications of MIL-R-26.
- Dimensional Tolerances ±1/32″.

ML2	.205	1½	.560	.032
ML3	.242	1½	.525	.032

FEATURES:
- Uniform molded size facilitates handling with automatic insertion equipment.
- Welded termination and lead/end cap assembly assure maximum reliability.
- Uniformly tinned leads assure reliable electrical and mechanical connections.
- Low temperature coefficient.
- 1% resistance tolerance standard.
- Available with Non-inductive winding.

SPECIFICATIONS:
- Resistance tolerance ±1% . . . Closer tolerance available.
- Temperature coefficient ±50 PPM . . . Lower TC available.
- Available resistance range 1-10,000 Ohm.
- Dielectric withstanding voltage 1000 V.
- Dimensional tolerances ±1/32″.

VL10	3/8	1½	1 13/16	.036

FEATURES:
- Lowest cost Wirewound Resistor with vitreous enamel coating.
- Popular small sizes for circuit board, point-to-point, or terminal board applications.
- Welded terminations and lead/end cap assembly assure maximum reliability.
- Balanced thermal expansion between core, wire and high temperature vitreous enamel assures reliable performance.
- Long term stability results from firing vitreous enamel at temperatures exceeding 1000°F.
- Uniformly tinned leads assure reliable electrical and mechanical connections.
- Uniform winding and coating assure uniform heat dissipation and excellent appearance.
- Low temperature coefficient.
- Available with Non-inductive winding.

SPECIFICATIONS:
- Resistance tolerance ±5% . . . Closer tolerance available.
- Temperature coefficient ±150 PPM . . . Lower TC available.
- Available Resistance Range of 1 to 50,000 Ohm.
- Supplementary insulation is recommended when potential to ground is greater than 500 V.
- Dimensional tolerances ±1/32″.

FEATURES:
- Tubular construction provides excellent heat dissipation.
- Welded terminals and termination guarantees positive electrical connections.
- Balanced thermal expansion between core, wire and high temperature vitreous enamel assures reliable performance.
- Long term stability results from firing at temperatures exceeding 1000°F.
- Tinned terminals provide reliable solder or mechanical connections.
- Uniform winding and coating provide uniform heat dissipation and excellent appearance.
- Quick disconnect terminals available as optional features.
- Standard units supplied with push-in mounting brackets.
- Other hardware available for mounting. See Hardware Section.

SPECIFICATIONS:
- Resistance tolerance ±10% . . . Closer tolerance available.
- Temperature coefficient ±100 PPM . . . Lower TC available.
- When dual wattages are shown . . .
  Lower wattages have a maximum "hotspot" of 275°C.
  Higher wattages have a maximum "hotspot" of 350°C.
- Available resistance range 1.0 to 100,000 Ohms.
- Meets or exceeds applicable specifications of MIL-R-19365.
- Dimensional tolerances ±1/32" . . . except ±1/16" on length of AR100, AR160-175 and AR200-225.

OVAL/MINIATURE OVAL: TYPE ZR (Oval) 30, 40, 55 W./TYPE MZ (Min. Oval) 10, 20 W.

FEATURES:
- Miniaturized oval for maximum power dissipation with lowest profile.
- Welded terminals and termination guarantee positive electrical connections.
- Balanced thermal expansion between core, wire and high temperature vitreous enamel assures reliable performance.
- Long term stability results from firing at temperatures exceeding 1000°F.
- Tinned terminals provide reliable solder or mechanical connections.
- Uniform winding and coating provides uniform heat dissipation and excellent appearance.
- Available with Non-inductive winding.
- Standard hardware allows stacking of units.
- Quick disconnect terminals available as optional features.

FEATURES:

- Heavy duty unit designed for application demanding maximum power dissipation in minimum space.
- Heavy ceramic tubular core provides heat sink for short term overloads.
- Available from 40 to 1500 watts.
- Available with tap or adjustable lug.
- A variety of mounting hardware available. See Hardware section.
- Welded terminals and termination guarantee positive electrical connections.
- Tinned terminals provide reliable solder or mechanical connections.

SPECIFICATIONS:

- Resistance Tolerance ±10%.
- Temperature coefficient ±100 ppm.
- Maximum Hotspot equal 415°C.
- Available resistance range .01Ω to 198Ω.
- Meets or exceeds applicable specifications of MIL-R-26.
- Dimensional tolerances ±1⁄32″ . . . except ±1⁄16″ on length of 6″ and above.

Two styles of vertical Mounting Hardware are available for all Tubular Resistors. Mica Washers are available where it is desirable to electrically isolate the mounting bolt.

This method of mounting saves horizontal mounting space and in addition provides a "heat sink" for the resistor.

Length of bolts provided are for ¼″ panel mounting — extra length bolts can be supplied per customer request.

HOW TO ORDER MEMCOR RESISTORS

1. Give Memcor type and wattage
   i.e. VL3 = Vitreous axial lead 3 watt
2. Give ohmic value and resistance tolerance required
3. Specify if any mounting hardware is required
4. Specify if any other special features are required
   i.e. Non-inductive winding for resistors

If there are special requirements, a two or three digit alpha call out will appear after the ohmic value; these digits will be assigned by the factory.

RESISTANCE VALUE CODE

X XXX

NUMBER OF DECIMALS TO MOVE TO THE RIGHT

BASIC RESISTANCE VALUE

EXAMPLE:
3100 = 100Ω
2100 = 10Ω
1100 = 1Ω
0100 = 0.1Ω

EXAMPLE MEMCOR PART NUMBER

RESISTOR = XXXXXX XXXX XX

VL 0003 3100 AY

TYPE RESISTOR
VL = Vitreous Axial Lead

WATTAGE
003 = 3 Watts

RESISTANCE
3100 = 100Ω

SPECIAL FEATURE
AY = Special Temp. Coef.

CTG PRECISION WIRE WOUND RESISTORS & NETWORKS

Charles T. Gamble Industries has engineered and designed non inductive precision wire wound resistors to meet and exceed the requirements of MIL-R-93. These resistors are completely sealed against the effects of high humidity and salt water immersion cycling. The material used in the manufacture of our resistors has a very high dielectric strength. The bobbin material used in winding the resistors is one and the same as the encapsulating material. All resistors use resistance wire with very low thermal E.M.F. to the copper leads. Where thermal effects can be disregarded, welded construction with nickel alloy leads may be specified.

- Temperature Coefficient: Standard is ±10PPM/°C. T.C.'s as low as ±2PPM and as high as 6000PPM/°C can be supplied
- Tolerance available: from ±1.0% to ±0.001%

NETWORKS: RC NETWORKS, LADDER NETWORKS, VOLTAGE DIVIDERS, BINARY NETWORKS

Standard Axial Lead Precision Resistors have been designed and engineered to offer high reliability and stability throughout a wide range of environmental factors.

Subminiature Axial Lead Precision Resistors have been designed for applications where space is a prime factor

Printed Circuit Resistors are designed for printed circuit board application, where space is a factor.

Radial Lug Resistors are supplied with a thru hole for mounting to the chassis by means of a #6 thru bolt.

Power Rating —
Maximum wattage ratings at 25°C through 125°C derated to 145°C at zero voltage

GENERAL SPECIFICATIONS

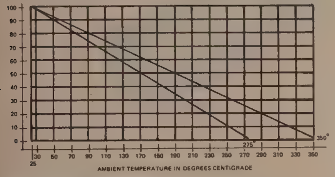
- Designed to meet the requirements of MIL-R-26
- Standard temperature coefficient ±20PPM additional TC's available from 5PPM/°C to 5500/°C
- Tolerance: ±1.0% standard. Available to ±.01%
- Wattage: ½ watt to 20 watts
- Coating — High temperature silicone, withstands moisture, salt water immersion, and cleaning solutions
- Leads: Tinned copperweld standard, other alloys available

Power Ratings:

Ratings are based on a 25°C ambient and either a 275°C (max.) or 350°C (max.) hotspot temperature

Characteristic U: Will result in .5% max. △R in 2000 hour load life

Characteristic V: Will result in a 3% max. △R in 2000 hour load life



Non-Inductive Winding:

- For non-inductivxe winding add prefix N
- Divide maximum resistance values by two
- Multiply maximum working voltage by .707

CTG ANODIZED ALUMINUM HOUSED HEAT SINK POWER RESISTORS / 5 WATT TO 250 WATT

FEATURES

- Meets MIL-R-39009 or MIL-R-18546
- Tolerances 5% to .01%
- Standard temperature coefficient 1Ω thru 20Ω ±50PPM/°C above 21Ω ±20PPM/°C. Lower T.C.'s available
- All welded construction
- Screw mounts on chassis

CTG RADIAL LUG TYPE VITREOUS POWER WIREWOUND RESISTORS

GENERAL SPECIFICATIONS

- Designed to meet the requirements of MIL-R-26E
- Wound using NiCr or CuNi Resistance Wire Alloys
- Positive center of winding pitch and tension eliminates hot spots
- Military grade of ceramic tube coated with "CTG" high temperature Vitreous Enamel Coating
- Wattage ratings from 5 to 250 watts
- Standard tolerance ±5%

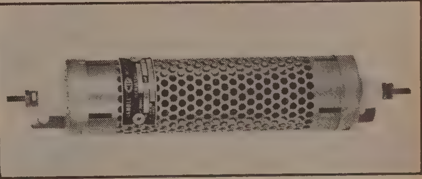
CTG CAGE MOUNTED RESISTORS

GENERAL SPECIFICATIONS

- Ventilating metal cage mounting for wall or panel locations where mechanical protection is required
- Terminals are brought out through insulating bushings
- Available in Single thru Four Cage Assemblies
- Wattage — 65 watts per resistor unit (enclosed rating)
- Tolerance ±5% standard



Metal cage mounted units are available as fixed units and can be assembled in series or parallel. Consult the factory with your specifications.

Resistor Products—Chip Resistors

Thin-Film Center-Tapped Chips; Standard Resistance Values; 5Ω To 510KΩ; On 30 MIL Square Chips

Features

- Precision
- Excellent Stability
- Low TCR
- Excellent Ratio Tracking
- Withstands High Temperature Assembly
- Nickel-Chromium or Tantalum Nitride
- Passivated
- High Reliability

Hybrid Systems' Thin Film Resistor Chips are specifically designed for use in hybrid circuits. A product innovator, Hybrid Systems, maintains an active R & D effort in support of its high-volume production programs for commercial and MIL-STD requirements.

Compatible With Active Chips, these resistor chips maintain their high performance resistor characteristics through all conventional integrated-circuit manufacturing processes.

Etched Silicon Backing allows easy, reliable die bonding using eutectic, epoxy, or other conventional techniques.

Large Area Aluminum Bonding Pads provide efficient operator location and proven reliable wire bonds.

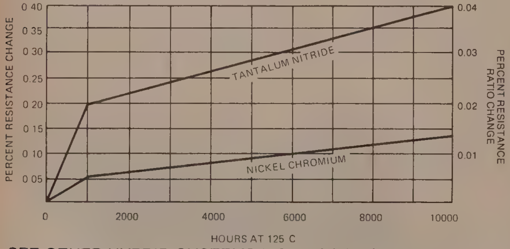
Glass Passivation offers added mechanical protection through assembly and chemical processes.

Excellent Characteristics; Inherent uniformity of individual resistors fabricated by vacuum deposition and photolithography processes results in resistor ratio tracking to 1PPM/°C typically. Individual resistors can be laser-trimmed to within ±.01%.

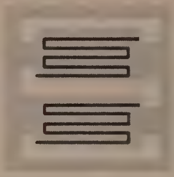
Nickel-Chromium or Tantalum Nitride versions of the thin- film resistor chips are available.

Reliability & Quality Assurance. Life test data proves quality and reliability over thousands of hours. Resistor chips and networks are inspected to the visual criteria specified in MIL-STD 883 Class B as our standard process with Class "A" inspection available upon request. Hybrid Systems' well staffed Quality Assurance and Reliability Department maintains the rigid standards necessary to assure reproductibility from month to month, and year to year. Hybrid Systems' Microelectronics manufacturing facility meets the Quality Assurance requirements of MIL-Q-9858A. Products are processed to meet the stringent requirements of MIL-M38510 and MIL-STD-883 specifications.

STABILITY CURVE (TYPICAL)



SEE OTHER HYBRID SYSTEMS LISTINGS IN SECTIONS 2000 AND 3130.



Center-Tapped Chips. Nickel-chromium thin-film resistor center tapped chips, with resistance values from 5Ω to 510KΩ, are supplied in 30 mil. squares. Standard tolerances are 1%, 5% and 10%; custom to 0.01%. Custom ratios up to 10:1 available for most resistor values in this series.

Resistor Networks. Resistor conformity, temperature tracking and stability are all better than with individual resistor chips—typically 1PPM/°C with long-term ratio stability of less than 0.01% after continuous operation at 125°C. A typical network contains approximately 10 resistors trimmed to 0.1% accuracy on a 0.080" x 0.080" x 0.008" silicon chip.

D/A Converter Resistor Network. Standard nickel-chromium or tantalum nitride designs for ladder, scaling, and adapter networks are available in chip and wafer form. Accuracies to 14 bits and TCR-tracking to 1 PPM/°C exemplify network performance as designed for D/A and A/D converters. The networks are laser, trimmed to their precise tolerances.

Specifications

CHARACTERISTIC	NICKEL-CHROMIUM	TANTALUM NITRIDE	UNITS
Resistivity Range	50 to 500	100 to 300	Ω/□
Resistance Range	5Ω to 10 Meg.	15 to 800K	Ω

TWX 710-332-7584

Resistor Products—Packaged Networks

Thin-Film Precision Networks—10Ω To 10MΩ
Standard Dual-In-Line And Flatpack Configurations

Features

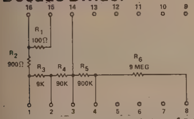
- Precision Tolerances
- High Stability
- Low TCR
- Low Noise
- Low Capacitance
- MIL-STD Screening

Hybrid Systems specializes in the application of thin-film technology and IC packaging to resistor network functions. For requirements of 2% or better absolute tolerance and/or ratios from 2% to 0.002%, Hybrid Systems offers a cost effective, timely solution. IC wafer fabrication technology and automatic laser trimming, combined with standard IC assembly techniques, provide versatile volume production capability.

Custom Networks

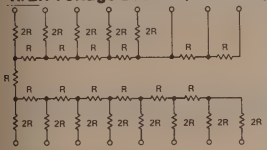
Hybrid Systems offers a wide range of fast turnaround resistor networks built to your exact specifications. Available in both chip and packaged form, these custom networks can typically be processed from specification to finished product in 6 to 8 weeks. MIL-STD-883 screening available.
A staff of resistor specialists is available to consult and advise on optimal configurations.
Some typical networks that you may evaluate are:

Decade Divider



- 100Ω to 9MΩ Resistance
- 0.01% Ratio Accuracy
- 5 PPM/°C max. Ratio Tracking
- High Voltage Operation (>1000 V)
- TO-116 (DIL) or 1/4" x 3/8" Flatpack

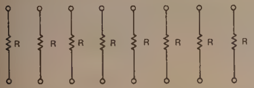
R/2R Voltage Ladder (25K/50K)



0.005% Ratio Accuracy Standard

- 0.002% Ratio Accuracy Available on Request
- 0.004% Ratio Accuracy over 1000 hrs @ 125°C.
- 100 ns Settling to 0.1%
- TO-116 (DIL) or 1/4" x 3/8" Flatpack

8 Resistor Network



- 1% Absolute Accuracy; R = 10K
- 1.0%, 0.1%, 0.01% Ratio Accuracy Available
- 1 PPM/°C Ratio Tracking
- 250 mWper Resistor (1W Total)
- 10:1 Ratio Variation per Resistor Available on Special Request
- TO-116 (DIL) or 1/4" x 3/8" Flatpack

Computer Laser Trimming

A fully automated laser trimming facility assures both consistency and uniformity for all high accuracy resistor products. This is the most modern trimming capability available anywhere.

Packages

Standard packaging configurations are listed below. Other packaging configurations are available, upon request.

TO	Flat Pack	Dual-In-Line
TO-5	14 Pin	14 Pin
TO-18	16 Pin	16 Pin
	24 Pin	24 Pin

Ceramic/Metal Packages

Designed for commercial and MIL-STD programs.

Low-cost plastic packaged equivalents maintain high accuracy and stability.

THE KRL POLICY

KRL Electronics is a leader in precision wire wound resistors. Our approach to the production process, which includes design and material improvements, modern facilities, dedicated and trained personnel, have established our reputation for HIGH QUALITY and RELIABILITY in the Electronics Industry. That means years of experience in manufacturing goes into every one of our products. Our customers know what they're going to get, right from the beginning. KRL is committed to a program of "ZERO DEFECTS" and is seeking better ways to improve its Quality Products. At KRL, we test 100% of our product 3 to 5 times, during the manufacturing process. This eliminates any possible failures. KRL holds a "ZERO DEFECT" record, with no returns in over 4 years.

**"KRL QUALITY IS REMEMBERED . . .
LONG AFTER THE PRICE IS FORGOTTEN"**

STANDARD SPECIFICATIONS:

RESISTANCE RANGE— 1Ω to 15MegΩ's

TOLERANCES— Standard from 1%, 0.5%, 0.25%, 0.1%, .05%, .02%, and .01%. Accuracies to .0025% are available . . . Consult factory.

TEMPERATURE COEFFICIENT— (TCR)

0 ±10PPM/°C — 100Ω and over
0 ±15PPM/°C — 10Ω to 100Ω
0 ±25PPM/°C — 1Ω to 10Ω
0 ±90PPM/°C — Less than 1Ω

Closer T.C.'s available to ±1PPM/°C

TEMPERATURE RANGE— Operating from —55°C to +145°C

T.C. TRACKING— Available to ±1PPM/°C.

RATIO MATCHING— Resistors are available with tolerance and temperature coefficient matching and tracking over a wide temperature range. Resistor sets are packaged in individual envelopes and printed with all matching information . . . Consult Factory.

ENVIRONMENTAL REQUIREMENTS— All KRL precision wire wound resistors are manufactured to meet or exeeed the applicable requirements of MIL-R-93 and MIL-R-39005.

MARKING— All resistors are printed with Trade Name, Style, Value, Tolerance and EIA Date Code, when room permits. All markings will meet or exceed MIL-STD-130.

LEAD MATERIAL— Standard lead material is tinned 180 Alloy
Also available in other types . . .

POWER RATING— Available from .05 watts to 2.0 watts. Use column marked COMM, which lists the commercial power rating in watts for all resistors .1% and up. For tighter tolerance resistors, all power ratings shown are maximum watts, refer to the Wattage vs. Tolerance Derating Curve at right.

STABILITY:

Precision Resistors— 0.001% for the first year, 0.0025% over a three year period.
Power Resistors— 0.003% for the first year, 0.005% over a three year period.

MARKING:

All KRL resistors are printed with indelible ink and are completely resistant to all cleaning solvents used for general purpose cleaning of P.C. Boards and assemblies. All markings will meet or exceed MIL-STD-130.

FREQUENCY CHARACTERISTICS:

Resistors above 10KΩ will appear capacitive and have 1 to 5pfds shunt capacitance, depending on value. Below 10KΩ resistors will appear inductive and can typically be controlled to less than 20 micro-henries and for specific applications be controlled down to 1 micro-henry . . . The above applies to Precision Resistors only.

RISE-TIME:

Available to less than 5 nano-seconds, as measured from 10% to 90% of the leading edge of a square wave pulse at 100KHZ applied across the resistor. These type resistors are called "HIGH SPEED" resistors, or Fast Switching Resistors.

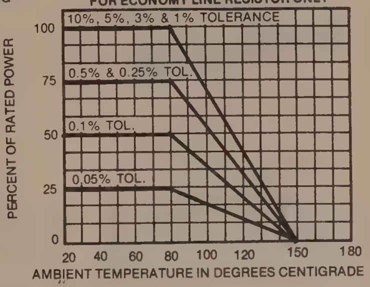
WATTAGE vs. TOLERANCE DERATING FOR ECONOMY LINE RESISTOR ONLY



KRL introduces the first true Economy Line Wire Wound Resistors . These resistors are ideally suited to D.C. Circuits and some A.C. applications. KRL EC SERIES are becoming especially popular in Industrial and Consumer applications, where low cost is of prime importance, and all the benefits of wire wounds, as low T.C. and high stability are required. An additional benefit, not offered by other manufacturers is the High Power Handling capability along with higher resistance ranges available from the KRL Economy Line Series.

STANDARD SPECIFICATIONS:

RESISTANCE RANGE— 0.01Ω to 500K Ω

TOLERANCES— Standard from 10%, 5%, 3%, 1%. Accuries to 0.05% are available, consult factory.

POWER RATING— .5 WATTS to 3.0 WATTS (See derating curves above)

OPERATING TEMPERATURE RANGE— from —55°C to +150°C.

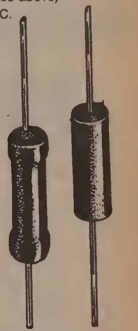
†Indicates Most Popular Types.

(1) Lead diameter may vary by one gauge depending on requirement.

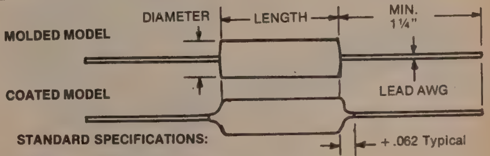
(2) Maximum working voltage determined at .0008" wire size.

(3) Non-Inductive types (NP), divide maximum resistance values by two, and multiply working voltage by .707.

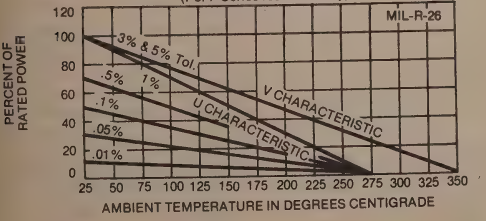


CHARACTERISTIC V: Coated resistors are available in 3% and 5% tolerance only.

CHARACTERISTIC U: Coated or Molded resistors are available in any tolerance.



WATTAGE vs. TOLERANCE DERATING
(For P Series resistors only)



STANDARD SPECIFICATIONS:

RESISTANCE RANGE— From 0.01Ω to 275KΩ

TOLERANCES— Standard from 10%, 5%, 3%, 1% (See tolerance order code on page 1). Accuracies available to ±.01%, consult factory.

TEMPERATURE COEFFICIENT— (TCR)

0 ±10PPM/°C — 100Ω and over
0 ±15PPM/°C — 10Ω to 100Ω
0 ±25PPM/°C — 1Ω to 10Ω
0 ±90PPM/°C — Less than 1Ω

Closer T.C.'s available . . .

All KRL power resistors are Hot Molded or Coated with a Silicone resin, selected to provide superior heat, thermal shock, and moisture resistance. The thermal life of our power resistor silicone coating is outstanding and directly competes with vitreous enamel and ceramic cement type resistors.

MRC MILWAUKEE
RESISTOR CORPORATION
700 WEST VIRGINIA STREET, MILWAUKEE, WI. 53204
Telephone: (414) 271-9900

WIREWOUND POWER RESISTORS

8 TO 2000* WATTS....VITREOUS ENAMEL, SILICONE OR CEMENT COATED

*STANDARD RESISTORS: 8 THRU 225 WATTS:.........
Vitreous Enamel 8,12,20,25,50,100,175 and 200 WATT are stocked in many values - both fixed and adjustable- *except 8 & 20 watt adjustable. WRITE FOR STOCK LIST !*

CUSTOM RESISTORS

36 additional wattage ratings are available with different core diameters and lengths. Non-inductive, tapped, live bracket, porcelain bushings, printed circuit board, strip and fuse resistors are manufactured to your specifications.

MILWAUKEE will satisfy your resistor requirements with custom values, tolerances, T.C., shapes, sizes and coatings with its engineering leadership.

TERMINALS

All 8, 12 and 20 watt fixed resistors are standard with 1½" tinned leads. They are available with conventional lug terminals.

12 watt adjustable and the 25 through 225 watt fixed and adjustable resistors have lug type terminals.

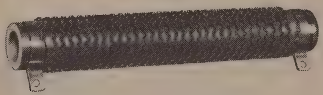
Available are single and double quick connect and many other special terminals to suit your requirements.

MOUNTING

Spring clips, vertical thru bolts and horizontal L brackets are available on all 8 through 225 watts. For ferrule mountings, special spring clips, mica washers, terminal hardware and other accessories, consult the factory.

WRITE FOR CATALOG DESCRIBING VARIOUS MOUNTING OPTIONS!

RIBWOUND RESISTORS 40 -2000 WATT



MILWAUKEE RIBWOUND RESISTORS are unique in the eveness of the crimping, allowing us to wind considerably higher ohmic values in any given wattage....If you have a particular application....*Contact our factory !*

APPLICATIONS

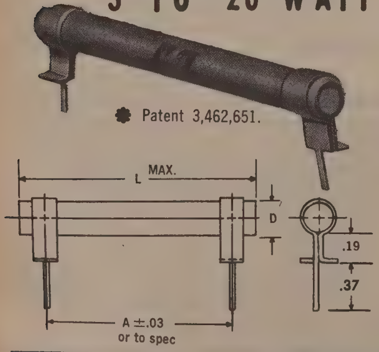
Particularly useful where high energy is to be dissipated in the lower ohmic ranges. Due to its ability to operate at higher temperatures and dissipate greater heat, the ribwound resistor is almost one-half the physical size of the equivalently rated round-wire style resistor. Ribwound wattage ratings are based on a temperature rise of 375°C. They may be mounted with spring clips (thru 1 ⅛" dia.); thrubolt mounting hardware, individual or multiple-stacked bracket assemblies or live bracket mountings.

MILWAUKEE's variety of coatings is particularly convenient for the manufacture of resistors for use in many special atmospheres...........
LET US KNOW OF ANY SPECIAL PROBLEMS !

BASIC CONSTRUCTION

Crimped ribbon resistance wire is edge-wound and then locked to the ceramic core with vitreous enamel. Resistance wire is spot-welded to the terminal connectors. Ribwound resistors can be furnished in fixed, adjustable, or tapped styles. Cement coating can be furnished. Several 300 watt units are stocked in both fixed and adjustable styles. Listed are the more popular 300 watt ohmic values. All other wattage ratings and styles are made to order.

3 TO 20 WATT PRINTED CIRCUIT BOARD RESISTORS



✽ Patent 3,462,651.

* For higher ohms, consult factory

FEATURES

- Built-in standoff keeps board cool.
- Mounting feet prevent rocking.
- Power ratings 3 to 20 watts.
- Complete OHM range.
- One-piece, welded terminals
- Rectangular leads .020 x .040 in.
- Silicon base coating. Vitreous enamel coating available.
- Standard tolerance ±5%.
- 20 PPM upon request.

MRC MILWAUKEE RESISTOR CORPORATION

700 WEST VIRGINIA STREET, MILWAUKEE, WI. 53204
Telephone: (414) 271-9900

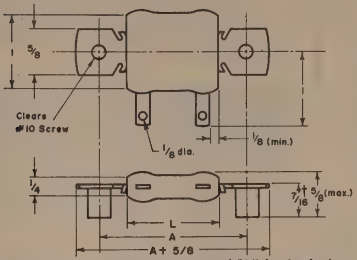
OVALS

OVAL RESISTORS are for use where space saving is desired and where the use of the 'Heat Sink' function of the metal chassis, rack or panel may be employed. Resistance tolerance of ±5% is standard except on low resistance and multi-tapped units. COATINGS of vitreous enamel or silicone base are offered.

OVALS are available in regular or miniature sizes an original development of MILWAUKEE Resistor.

Additional miniature oval core sizes are available increasing the possibility of taps and isolated sections. Other intermediate size are also available. Only regular ovals are available as adjustable.

REGULAR



† 7/16" is standard.

Watts*	Ohms	Dimensions

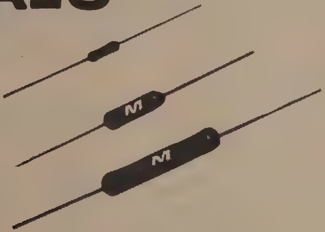
AXIALS



APPLICATIONS

- Electronic Circuitry
- Printed Circuits
- Radio, Television and Sound Reproduction
- Miniature Controls

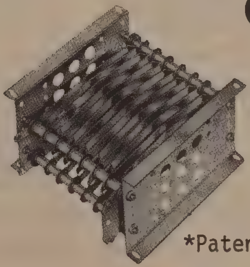
CONSTRUCTION

- Wire Wound on Ceramic Core
- All Welded
- Vitreous or Silicone Base Coating

FEATURES

- Rugged yet small.
- Highly stable.
- Matched expansion in core caps and coating for temperature stability.
- Standard 5% tolerance over 1 ohm, available in closer tolerances on request.
- Wattage ratings based on 325°C rise at 25°C ambient.
- Standard Stock — 3, 6.5 and 11 watt sizes.
- Leads Hot Tin Dipped.
  Available in a variety of sizes from 1 watt through 11 watts on request.

GRIDS *



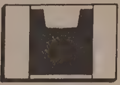
Stud or Deck Mounted, MILWAUKEE's patented pre-formed grid shape assures maximum heat dissapation & cooling.

*Patent 3,212,045

Pre-formed grid elements assure unidirectional stress motion. Custom design and construction features are most economical utilizing the exclusive MILWAUKEE patented grid system.

PRECISION *thick film* CHIP RESISTORS

why chip resistors?



why MINI-SYSTEMS?

In hybrid construction many have found it cheaper, quicker and easier to use MINI-SYSTEMS' chip resistors for prototypes, short production runs, "odd" high or low values, unique match and/or track specs, "tweak" or trim functions and cross-overs. Size reduction and repairs are easily accomplished with MSI Chip Resistors.

MINI-SYSTEMS has a wide selection of standard chip resistors tailored to fit assorted end uses. They are made from the very finest commercially-available, thick film materials; NO proprietary concoctions or "witches' brews" are used at M S I.

MINI-SYSTEMS has devoted over 6 years to developing and refining the materials and manufacturing processes used in high volume production of over 30 standard types of chip resistors.

MINI-SYSTEMS' quality program assures the customer of the highest possible reliability. Quality control procedures are derived from the requirements of MIL-Q-9858A, and MIL-I-45208A. Inspection records are maintained from the raw material to final processing and testing stage. Total traceability is maintained. Quality assurance inspection points are built into each manufacturing procedure to assure uniformity and conformance to applicable specifications. All resistors manufactured by MINI-SYSTEMS are designed to retain the electrical and mechanical characteristics under conditions set forth in MIL-R-55342

MINI-SYSTEMS' well-known reputation for prompt deliveries is the product of an in-depth inventory and efficient processing of all customers' orders; most orders are on their way within 5 days after we receive them.

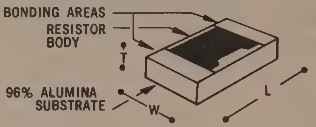
GLASS OVERLAY ON ALL RESISTIVE ELEMENTS



NOTES:

(1) "Flip-Chip" resistors have solder-tinned (SN-62) end-metallization over high-adhesion palladium-silver.

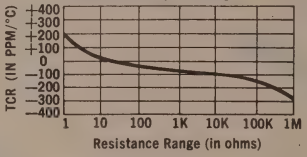
(2) Wire bond resistors have 0.0005" gold end-metallization optimized for wire bonding.

(3) Type WA-resistors have wraparound end-metallization for reflow solder or conductive epoxy attachment.

(4) MSR-11 is a high-voltage power resistor available on special order to customer's specification.

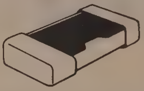
TEMPERATURE COEFFICIENT OF RESISTANCE

Actual TCR varies ±150 PPM/°C from typical, depending on geometry, materials and processing.



* *wraparound metallization*

TYPES WA-4/7/9/13 are unique design, HI-REL chip resistors having a glass-passivated resistor body "sandwiched" between double-screened electrodes. End metallization is double-dipped, high-adhesive platinum-gold plus solder tinning with "SN-62."



STANDARD OHMIC RANGE

New Products

PRECISION THIN-FILM CHIP RESISTORS

MINI-SYSTEMS' "Nichrome on Ceramic" Thin Film Chip Resistors offer several improvements and unique advantages:

- Extra large gold/nickel bonding pads — ideal for all bonding methods — provide "tie-point" convenience.
- Diamond wheel dicing for precise sizes and geometries.
- Values to 10 Megohms
- Low noise.
- Rapid deliveries.
- Low TCR.

Call, wire or write =M=S=I= for complete information or for your special requirements on =M=S=I= THIN FILM RESISTORS.

Today's I.C.'s and Hybrid Microcircuits need packages more appropriate for the devices and/or end application. MINI-SYSTEMS proudly presents to the electronics industry a carefully conceived and engineered assortment of completely new hermetic Flat-Paks. These designs will give new possibilities, complement, and in some cases replace, existing Flat-Paks.

MINI-SYSTEMS Packages now and in the future will cater to new I.C. devices and hybrid microcircuit requirements. MINI-SYSTEMS pays consistent attention to quality, customer service and deliveries.

Min. Res. Tol. Available is ±1% on the NS Styles.

SAGE SILICOHM® fixed wirewound units are not ordinary power resistors. They provide remarkable miniaturization vs required wattage performance. Sage has pioneered the area of power handling capacity combined with precision and stability features ordinarily associated with Mil-R-93 resistors.

TYPE SB & NSB HIGH WATTAGE COMMERCIAL BERYLLIA CORE RESISTORS

SAGE/NYTRONICS RESISTORS

TYPE S RESISTOR ITEM DESCRIPTION

Sage Part Number identification consists of a combination of numerals and letters according to the following guide. This is the nomenclature ordinarily marked on resistors and it fully serves the purpose of purchased item description except for limited cases of special testing. Note that grouping of characters is not constant, but varies to fit descriptive need of a given part.

STYLE DESIGNATION

1500 **S / NS** **B** **2740** **1**

If applicable

Nominal Value, Ohms (decimal symbol, as required, is used in both nominal value and tolerance)

±% tolerance

Core Material and Process Classification:
Blank entry indicates regular steatite core, commercial processing
A = alumina core, commercial processing
B = beryllia core, commercial processing
P = alumina core, High Rel processing
M = beryllia core, High Rel processing

S = Silicohm®, single layer wound; **NS** = Silicohm®, non-inductively wound

Body type, size, lead details per catalog chart

PRICING: On request from factory or any regional office. Item price is based on style designation, ohmic value, tolerance and quantity, plus any special testing if applicable.

QUALITY ASSURANCE: Sage continuously maintains systems and procedures for quality-reliability administration in conformance with:

MILITARY — MIL-Q-9858, MIL-I-45208A and MIL-STD-790
Our Federal Supply Code No. is 00213
Our Federal Supply Product Class is 5905

GOVERNMENT SOURCE INSPECTION: GSI orders are serviced on a regular basis by the Defense Contract Administration Services.

- **Unique Molded Construction Provides Consistent Shape and Size**
- **Exceeds MIL-R-26 Moisture Requirements**
- **Endures Heat Up to 1500°F**
- **All Welded Construction**
- **Ideal for Machine Insertion and High Density Circuits**

Series 99 molded vitreous wirewound resistors are high performance components designed for precision instrumentation, medical equipment and other applications demanding high reliability and stable operation. MIL-R-26 approved units are available for Military Application.

An extremely wide range of resistance values can be specified (5% tolerance standard), up to 11 watts with 1 KV dielectric breakdown rating (500 V for 1 W types). Low temperature coefficient values of approx. 0 ±30 ppm/°C are typical. Precision molded bodies make them an excellent choice for machine insertion production line techniques. Durable molded bodies withstand harsh solvents.

MECHANICAL

Terminal Strength: Meets MIL-R-26 requirements.

Dimensions: See table at left.

ELECTRICAL

Tolerance: ±5% std.; ±1% to ±10% available.

Temperature Coefficient: 0 ±30 ppm/°C (+25°C to +350°C) for most values. T.C. for low values depends on resistance.

Dielectric Withstanding Voltage: 1 KV (500 V for 1 W types).

Overload, Short Time: 10X rated wattage for 5 sec. (5 W size and larger); 5X rated wattage (under 5 W).

Wattage: Up to 11 watts; see table. Ratings may be increased by using metal mounting clips. See Ohmite Catalog No. 100.

Inductance: Varies with number of turns and wire size. Std. units have single layer winding. Non-inductive (Aryton-Perry) windings available.

MATERIALS

Core: Steatite ceramic, resistant to thermal shock and wide variations in temperature.

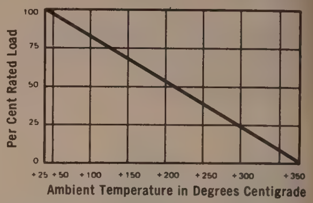
Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.

Coating: High performance molded vitreous enamel.

Leads: Solder coated.

DERATING

Wattage rating is based on 25°C **Free Air Rating.** For higher ambient temperatures, use derating chart.



Popular values are available from Ohmite stock or from your local authorized Ohmite stocking distributor. Refer to Ohmite Catalog No. 300.

ORDERING DATA

For other than stock values specify style, resistance and tolerance.

For example: 995-1A, 500 ohms, 2% tolerance specifies a 1 watt, 500 ohm molded vitreous enamel resistor with a resistance tolerance of 2%.

For special mechanical or electrical requirements, your inquiry will be given prompt attention.

- **Rugged Vitreous Enamel Coating Withstands Severe Humidity and Temperature Cycling**
- **Economical**
- **All Welded Construction**
- **Ideal for Machine Insertion**

Advanced conformal vitreous enamel coating protects resistors, even in environments of high heat. These rugged, economical wirewound resistors are recommended for industrial applications where quality construction and reliable operation are prime specifying parameters. 5% tolerance is standard for all wattage sizes. Dielectric breakdown is 1 KV. (500 V for 1 W size). Typical T.C. of 0 ±30 ppm/°C for 10Ω values and above.

MECHANICAL

Terminal Strength: Meets MIL-R-26 requirements.

Dimensions: See table at left.

ELECTRICAL

Tolerance: ±5% std.; ±1% to ±10% available.

Temperature Coefficient: 0 ±30 ppm/°C typical for 10Ω and above.

Dielectric Withstanding Voltage: 1 KV (500 V for 1 W types).

Overload, Short Time: 10X rated wattage for 5 sec. (5 W size and larger); 5X rated wattage for 5 sec. (under 5 W).

Wattage: Up to 11 watts; see table.

Inductance: Varies with number of turns and wire size. Std. units have single layer winding. Non-inductive (Aryton-Perry) windings available.

MATERIALS

Core: Ceramic, resistant to thermal shock and wide variations in temperature.

Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.

Coating: High performance conformal vitreous enamel.

Leads: Solder coated.

DERATING

Wattage rating is based on 25°C **Free Air Rating.** For higher ambient temperatures, use derating chart.

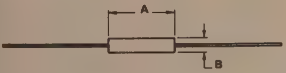
®CERON is a registered trade name of Ohmite Mfg. Co.



- Flameproof — WILL NOT IGNITE from any Overload or Exposure to Open Flame
- Ideal for Applications Where High Overloads Could Result in Flaming or Body Deterioration
- Exceeds All Environmental Requirements of MIL-R-26E
- Resists Shock, Vibration, Salt Spray; Immune to Fungus Growth
- All Welded Construction
- Ideal for Machine Insertion

A unique coating on a rugged power wirewound resistor for a spectrum of applications where nonflammability is absolutely essential. Designed for use in data processing equipment, communications equipment, electrically controlled apparatus, medical and home entertainment equipment . . . and similar demanding applications.

MECHANICAL

Terminal Strength: Meets MIL-R-26E requirements.
Dimensions: See table at left.

ELECTRICAL

Tolerance: ±5% std.; ±1%, ±3%, ±10% available.

Temperature Coefficient: 0 ±30 ppm/°C max. Lower T.C. available on special order.

Dielectric Withstanding Voltage: 500 V (250 V for 1 and 2 W sizes). 1 KV available.

Overload, Short Time: 5X rated wattage for 3 seconds.

Wattage: Up to 10 watts; see table.

Inductance: Varies with number of turns and wire size. Std. units have single layer winding. Non-inductive (Aryton-Perry) windings available.

MATERIALS

Core: Ceramic, resistant to thermal shock and wide variations in temperature.

Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.

Coating: FLAMEPROOF CERON® conformal ceramic.

Leads: Solder coated.

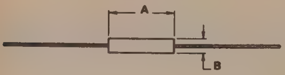
®ACRASIL is a registered trade name of Ohmite Mfg. Co.



- **Beryllium Oxide Core Provides Optimum Heat Dissipation**
- **Precision Tolerance — 1% Standard**
- **Small Size**
- **Exceeds MIL-R-26 Requirements for Mil Applications**
- **All Welded Construction**
- **Ideal for Machine Insertion**
- **High Reliability**

High thermal conductivity beryllia cores permit greater heat dissipation in smallest practical package. In addition, silicone coating provides excellent moisture resistance (exceeds MIL-R-26E), high dielectric strength, and protection against effects of shock, vibration, fungus and salt spray. External markings are resistant to most commonly used commercial solvents.

Series 56 Beryllia-Core ACRASIL resistors are recommended for printed circuit board assemblies, terminal-to-terminal, and point-to-point connections in all types of military and industrial equipment calling for a compact, high heat dissipating, precision power resistor.

Series 56 resistors can be supplied reel-taped for machine insertion, if desired. Type 561 (1 W) is ideal for use in cordwood modules, also.

MECHANICAL

Terminal Strength: Meets MIL-R-26 requirements.
Dimensions: See table at left.

ELECTRICAL

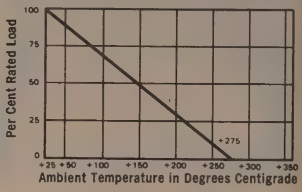
Tolerance: ±1% std.; ±.05% to ±5% available.
Temperature Coefficient: >0.1Ω to 1Ω — 0 ±90 ppm/°C — 1Ω and greater — 0 ±20 ppm/°C (Type 561).
Dielectric Withstanding Voltage: 1 KV (500 V — sizes under 5 W).
Overload, Short Time: 10X rated wattage for 5 sec. (5 W and larger); 5X rated wattage for 3 sec. (under 5 W).
Wattage: Up to 15 W in 7 types: 1, 2, 5, 6, 7, 10 and 15 watts.
Inductance: Varies with number of turns and wire size. Std. units have single layer winding. Non-inductive (Aryton-Perry) windings available.

MATERIALS

Core: Beryllia ceramic (high heat conduction).
Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance elements welded to metal end caps.
Coating: ACRASIL® conformal silicone resin.
Leads: Solder coated.

DERATING

Wattage rating is based on 25°C **Free Air Rating.** For higher ambient temperatures, use derating chart.



ORDERING DATA

To specify resistors, see below:

Typical No.

56 1 S R5000 J

OHMITE SERIES NO. Identifies basic resistor construction.

WATTAGE
1=1 W
2=2 W
3=3 W
4=4 W
5=5 W
6=6 W
7=7 W
0=10 W or more

MISCELLANEOUS SPECIFICATIONS
S=Standard winding.
N=Non-inductive winding.
P=Standard winding with actual wattage rating more than indicated.
T=Non-inductive winding with actual wattage rating more than indicated.

RESISTANCE VALUE
Value is identified by 4 digits and 1 letter. Resistance is expressed in ohms with the letter "R" signifying a decimal point. "R" is used in all resistance values lower than 1000Ω. Letter "K" indicates multiples of 1000Ω.

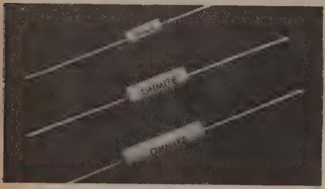
Examples:
R5000= 5Ω
1R000—1Ω
250R0=250Ω
1K000=1000Ω
25K00—25,000Ω
25K50=25,500Ω

TOLERANCE
A= ±.05%
B= ±.1%
W= ±.125%
C= ±.25%
D= ±.5%
F= ±1% std
G= ±2%
H= ±3%
J= ±5%
Not available for non-inductive types.

For special mechanical or electrical requirements, your inquiry will be given prompt attention.

OHMITE® series 88 riteohm

MOLDED SILICONE CERAMIC AXIAL LEAD WIREWOUND RESISTORS



SERIES 88 RITEOHM®

Watt	Type	Resist. Range Min.-Max.	Body Dimensions Max. L. A ("/mm)	Body Dimensions Max. Dia. B ("/mm)	Leads (1.5"/ 38.1 mm) Ga.	Heat Sink Clip No.

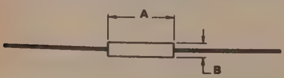
2	884-2	.1-10K	.395/10	.208/5.3	20	5902
3	884-3	.1-34K	.562/14.3	.250/6.4	20	5904
5	884-5	.1-124K	.937/23.8	.343/8.7	18	5905
7	884-7	.1-178K	1.238/31.4	.343/8.7	18	5907
10	884-10	.1-301K	1.843/46.8	.363/9.2	18	5909

®RITEOHM is a registered trade name of Ohmite Mfg. Co.



- **Molded Construction — Designed for High Stability, Precision Power Applications**
- **Low Temperature Coefficient**
- **1% Tolerance Standard**
- **All Molded Construction for Uniform Sizes**
- **Excellent Breakdown Voltage Rating**
- **All Welded Construction**
- **Ideal for Machine Insertion**

Series 88 precision power resistors provide high stability, load life ΔR of 0.5% with low T.C. and are recommended for high performance and reliability. All molded construction provides uniformity of sizes and even heat dissipation. Tolerance is 1% standard for 1, 2, 3, 5, 7 and 10 watt types. Clip mounting is possible for up to 100% increase in wattage. Typical T.C. is 0 ±20 ppm/°C.

MECHANICAL

Terminal Strength: Meets MIL-R-26 requirements.
Dimensions: See table at left.

ELECTRICAL

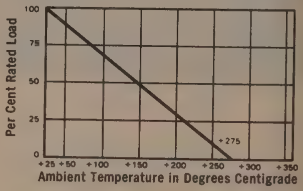
Tolerance: ±1% std.; ±.05% to ±10% available.
Temperature Coefficient: 0 ±20 ppm/°C for 10Ω and above.
Dielectric Withstanding Voltage: 1 KV (500 V for 1 W types).
Overload, Short Time: 10X rated wattage for 5 sec. (5 W size and larger); 5X rated wattage (under 5 W).
Wattage: Up to 10 watts; see table. Rating may be increased by using metal mounting clips. See Ohmite Catalog No. 100.
Inductance: Varies with number of turns and wire size. Std. units have single layer winding. Non-inductive (Aryton-Perry) windings available.

MATERIALS

Core: Ceramic, resistant to thermal shock and wide variations in temperature.
Resistance Element: High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.
Coating: Molded OHMICONE® — tough, resilient, moisture-resistant, high dielectric silicone ceramic.
Leads: Solder coated.

DERATING

Wattage rating is based on 25°C **Free Air Rating.** For higher ambient temperatures, use derating chart.



ORDERING DATA

For other than stock values specify style, resistance and tolerance.

For example: 884-1A, 500 ohms, 1% tolerance specifies a 1 watt, 500 ohm molded silicone ceramic resistor with a resistance tolerance of 1%.

Popular values are available from Ohmite stock or from your local authorized Ohmite stock distributor. Refer to Ohmite Catalog No. 300.

For special mechanical or electrical requirements, your inquiry will be given prompt attention.

OHMITE MFG. CO., a North AMERICAN PHILIPS company / 3601 W. Howard St., Skokie, Illinois 60076 / (312) 675-2600 / TWX 910-223-0805 / TELEX 72-4433

OHMITE® series 89 metal-mite™ resistors

FEATURES

- Molded construction
- Screw type mounting on housing
- Chassis design utilizes heat-sink effect
- Conventional power ratings produce high stability
- Housing surface allows for easy identification
- 5 through 50 watt models with standard or non-inductive winding

OHMITE Type	MIL-R-18546 Type	Power Rating* Watts		Resistance Ranges (Ohms) 1% Tolerance	Standard Temperature Coefficient Value Ranges (Ohms)		
		OHMITE**	MIL		±90 ppm	±50 ppm	±20 ppm
8905S	RE60G	7.5(5)	5	.1-24.9K	.1-.99	1-9.99	10-24.9K
8910S	RE65G	12.5(10)	10	.1-49.9K	.1-.99	1-9.99	10-49.9K
8925S	RE70G	25	20	.1-100K	.1-.99	1-9.99	10-100K
8950S	RE75G	50	30	.1-301K	.1-.99	1-9.99	10-301K

*Rating is based on chassis mounting area and stability proper heat sink.
4 x 6 x 2 x .040 aluminum chassis for 5 and 10 watt units
5 x 7 x 2 x .040 aluminum chassis for 25 watt units
12 x 12 x .059 aluminum panel for 50 watt units
**Types 8905 and 8910 will be stamped with wattages shown in parentheses but will be stamped with higher ratings upon customer request.

DERATING

Series 89 resistors have an operating temperature range of −55°C to 275°C. Derating is required for reduced chassis mounting area and high ambient temperatures. The following curves apply to operation of unmounted resistors:

A = 5 and 10 watt units
B = 25 watt units
C = 50 watt units

†Types 8905 and 8910 stamped with wattage shown in parenthesis.

OHMITE® type 200 *brown devil*® fixed resistors

SERIES 200

BROWN DEVIL® (Type 200) resistors, are vitreous enameled, wirewound units long famous for ruggedness and durability in small power resistors. With the emphasis towards miniaturization and the current industry trend towards higher operating temperatures, Ohmite has been able to increase the ratings on two Brown Devil sizes. The 5 watt size is now rated **8 watts** and the 10 watt size is now rated **12 watts**. The 20 watt unit retains the same rating. The higher ratings may be confidently applied to any 5 or 10 watt unit now in the possession of users or distributors. At this time also, to meet the demand for lower wattage units, Ohmite introduces two, new, small stock sizes — 3 and 5¼ watts.

Standard resistance tolerance is ±5% for values 1 ohm or higher; ±10% for values below 1 ohm. Tinned leads 1½" long: 3 and 5¼ watt, 20 AWG; 8, 12 and 20 watt, 18 AWG.

OHMITE® type 270 vitreous enameled fixed resistors

SERIES 270

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel — the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk pack orders. See page ??, "Mounting Brackets for Tubular Resistors" to specify other brackets.

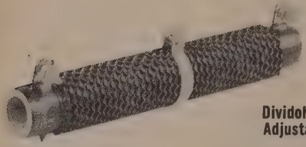
OHMITE® corrib® HIGH CURRENT LOW OHMS resistors



SERIES 280 & 230

**Dividohm®
Adjustable**

High current, low resistance, heavy duty units used in motor starting, dynamic braking, etc. "Corrib" type units employ a corrugated ribbon of resistance alloy. This is space-wound edge-wise around a ceramic tube. Vitreous enamel is fused around the alloy ribbon to lock the turns securely in place. Heavy lug terminals. Resistance tolerance is ±10%.

Available in fixed or Dividohm® adjustable types. Dividohm® type is similar to fixed and includes one adjustable lug. Rating of Fixed or Dividohm® stock units—300 watts—reduce unit load for stack-mounted resistors; core size (bare) 8½" long x1⅛" diameter. Other sizes made to order.

powr-rib® HIGH CURRENT LOW OHMS resistors

Even higher power handling capability—approximately 700 to 1000 watts—is available in stock, "Powr-Rib" resistors. These are UNCOATED types and are wound either edgewise with ribbon ("Edgewound" type) or with round wire (Round-Wire type).

The core of these units consists of ceramic segments on a metal bar which is slotted on both ends for rapid installation. Standard resistance tolerance is ±10%. Terminals clamp onto the resistor wire and may be moved in from the ends for intermediate resistance values. Extra terminals available for use as taps. See diagrams for terminals. Terminal Stk. No. 2172G (not shown) has screw connections.

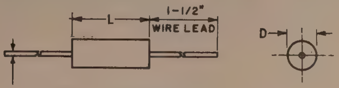
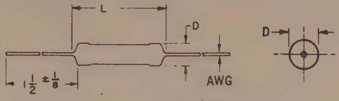
OHMITE® wirewound resistors / axial lead and pc series



Series 88 & 99



Series 22, 44, 56 & 57

OHMITE WIRE WOUND AXIAL LEAD RESISTORS

All of Ohmite's axial lead resistors feature a high quality resistance wire, single layer wound on a cylindrical ceramic core, and welded to metallic end caps. The leads are solder coated, weldable wire 1½" long. Specific mechanical and electrical parameters are listed in appropriate descriptions and tables for the individual Series below.

HOW TO ORDER

MOLDED — For Series 88 and 99, specify style, resistance and tolerance.
CONFORMAL — Specify these Product Numbers:

56 1 S R5000 J

OHM E SERIES NUMBER
This identifies the basic resistor construction.

WATTAGE
1 = 1W 5 = 5W
2 = 2W 6 = 6W
3 = 3W 7 = 7W
4 = 4W 0 = 10W or more

MISCELLANEOUS SPECIFICATIONS
S = Standard winding
N = Non-inductive winding
P = Standard winding with actual wattage rating more than indicated
T = Non-inductive winding with actual wattage rating more than indicated

RESISTANCE VALUE

TOLERANCE
A = ±.05%
B = ±.1%
W = ±.125%
C = ±.25%
D = ±.5%
} Not available for non-inductive types
F = ±1%
G = ±2%
H = ±3%
J = ±5%

Resistance value is identified by four digits and one letter.
Resistance is expressed in ohms with the letter "R" signifying a decimal point. "R" is used in all resistance values lower than 1000 ohms. The letter "K" indicates multiples of 1000 ohms.

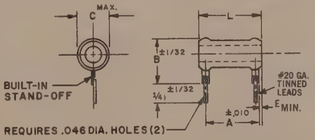
This chart provides all basic data needed to specify the right axial lead wirewound resistor for your circuit application. Refer to application guide to select the proper resistor based on your key specifying parameters.

VITREOUS ENAMEL		FLAMEPROOF CERAMIC
Series 99 Hi-Heat Dissipation Molded Construction MIL-R-26	**Series 99 & 22** Severe Humidity Protection Resistant to All Solvents Industrial Applications	**Series 57** Flameproof Severe Environments Immune to Fungus Growth High Overland Design
	SILICONE CERAMIC	
Series 88 Molded Construction **Series 56** MIL-R-39007	**Series 44, 88 & 56** Low TC Close Tolerance High Heat Dissipation Industrial Applications	**Series 88 & 56** High Stability Small Size/ High Heat Dissipation

Ohmite can supply resistors for applications requiring high reliability performance characteristics per MIL-R-39007.

- Meets MIL-R-26 Where Applicable
- Popular Values of Series 88, 99 and 44 Available from Stock
- Lead Taping Available
- Higher and Lower Resistance Values other Than Those Listed Above are Available. Consult Factory.

RADIAL LEAD RESISTORS FOR P.C. BOARDS



Resistance Element: Resistance wire single layer wound on a tubular ceramic core and welded to lug bands.

Terminals: Radial, wire leads welded to lugs on centers to fit standard 0.1 inch matrix boards. Built-in standoff.

Coating: Vitreous enamel or Ohmicone (silicone-ceramic).

Marking: Ohmite code and resistance value (ohms) on top opposite leads.

Tolerances: Vitreous (Type 270) ±5%, 1 ohm and higher — ±10%, below 1 ohm. For closer tolerances, specify Type 474 (Ohmicone).

Temperature Coefficient: Less than 260 PPM/°C — Lower temperature coefficient available in Type 474 (Ohmicone).

Rated Watts @ 25°C	Dimensions				
	A ±.010	B ±1/32	C Max.	E Min.	L ±1/64

OMI

PRECISION POWER WIRE WOUND RESISTORS AND HEAT SINK RESISTORS

Accuracy, quality, inventiveness, economy and ship-date guarantee are keystones in the dozen years Omtronics Manufacturing, Inc. has supplied the manufacturing community. If you see what you require in the following pages, you can count on its availability when we say, either from our Stock Resistor shelves or manufactured for your needs. If you need something special in heat sinks or experimental resistors, let us put our engineers to work for you. Our facilities are as close as your phone.

OMTRONICS MANUFACTURING, INC. • 2406 LEAVENWORTH STREET, OMAHA, NEBRASKA 68105 • (402) 348-9500

OMI CROSS REFERENCE CHART

This is a cross reference between OMI resistors and those of other manufacturers. Exact inter-changeability is not implied as some minor differences may exist. See applicable catalog bulletins for detailed information. The Mil-type designation is shown as a reference only and is not meant to imply qualification approval.

TOTAL RANGE

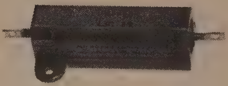
OMI
FIXED RESISTORS

T

17 Basic sizes of silicone coated precision resistors from ½ to 10 watts, .05 to 275K ohms.

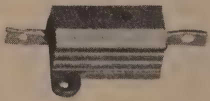
HT

Anodized, aluminum housed precision wire wound resistors for chassis mount. Four sizes, 5-50 watts, .1 to 250K ohms.



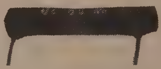
HF

Identical models to HT Series but offering increased power ratings through use of beryllium oxide cores.



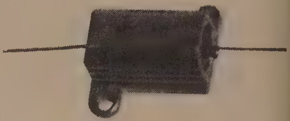
TR

Identical to T Series models in ratings and specifications but are furnished with radial leads. Also available in NR Series, non-inductively wound.



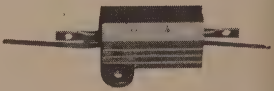
HN

A similar series to HT Series with electrical and physical equivalents but with non-inductive windings.



HFN

Identical to the HF Series above but non-inductively wound.



N

All series of OMI resistors are available in the non-inductive winding form. N or FM converts your order from T and F.

FN

Conversion letters for non-inductive windings of the F Series.

F

10 basic sizes at ratings from 1-15 watts offer greatly increased power ratings over conventional sizes, 0.1 to 250K ohms.

BW

High performance at low cost resistors, specially applicable to industrial uses. 6 sizes, complete welded construction.

CA

5 sizes of resistors wound on fibre glass cord, potted in ceramic case. High thermal conductivity and moisture resistant.

SPECIAL DESIGN

OMI offers engineering facilities to prepare and test for you heat sinks and special designs to meet particular needs.

STOCK RESISTORS

A whole host of stock resistors from .020 to 200K ohms in our standard series to supply normal instant supply.

T SERIES

OMI

PRECISION POWER RESISTORS AXIAL LEADS

Highly reliable, silicone coated, precision resistors manufactured to meet MIL-R-26 specifications. There are 17 basic sizes with power ratings from ½ to 10 watts and resistance ranges from .05 ohms to 275K ohms. Resistance tolerances from .05% to 5% (1%, standard). Temperature coefficient of resistance 2PPM up (20PPM, standard).

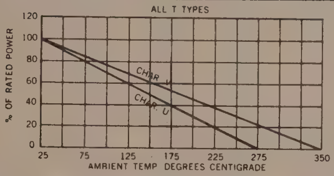
* Max. working voltage determined at .0008 wire.

SPECIAL FEATURES • Close tolerances (to .01% available). • Extremely high stability. • Low TC of resistance (to 2PPM). • Welded construction terminal to terminal. • Wide temperature range: from −65° to 275° C. • A specially formulated silicone coating makes OMI T-series resistors impervious to moisture, salt spray, abrasion and expanded temperatures.



DERATING

Applicable to both F and T Series

Both OMI, T and F Series resistors have an operating temperature range of −55°C to 275°C (characteristic U) or to 350°C (characteristic V). Derating is required for high ambient temperatures in accordance with the curve shown at left.

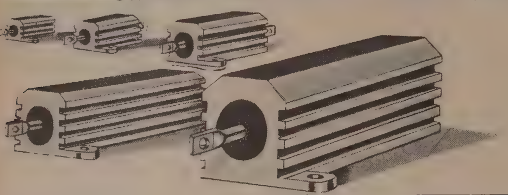
HT HF

OMI

ALUMINUM HOUSED RESISTORS STANDARD & EXTENDED POWER RATINGS



HT Models are anodized, aluminum-housed, precision wire-wound resistors, designed to chassis mount for maximum heat dissipation. They are manufactured to meet or exceed MIL-R-18546 specifications. Four sizes: 5 to 50 watts (mounted), resistance ranges from .1 ohm to 250K, depending on size. Tolerances —1% standard — .05% to 5% available. Temperature coefficient from 2PPM up. (20PPM, standard.)

HF Models are identical in dimensions, resistance ranges, tolerance and temperature coefficients with those of the HT Series, but offer a great increase in their power ratings as similar size through the use of beryllium oxide cores for increased heat dissipation. These are manufactured to exceed MIL-R-18546 power ratings.

STANDARD ELECTRICAL SPECIFICATIONS

OMI Type		MIL Type	Power Rating (Watts)*			Resistance Range		Max. Working Voltage		Max. Weight Grams
			HF (OMI)	HT	MIL	MIN.	MAX.	HF	HT	
HF-5	HT-5	RE-60	15	5	5	.1	22K	220	160	3
HF-10	HT-10	RE-65	20	10	10	.1	47K	340	265	7
HF-25	HT-25	RE-70	35	25	20	.1	90K	650	550	14
HF-50	HT-50	RE-75	50	50	30	.1	250K	1400	1250	29
	HT-75			75		.1	75K		1500	120

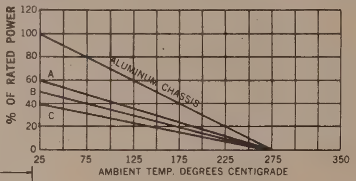
*Rating is based on chassis mounting area and stability.

Chassis Dimensions:

HT-5, HF-5, HT-10 and HF-10 — 6x4x2x .04", Aluminum Chassis.

HT-25, HF-25, HT-50 and HF-50—7x5x 2x.04". Aluminum Chassis.

HT-75 — 12"x12"x.062, Aluminum Panel.



DERATING

OMI, HT and HF resistors have an operating temperature range of —55°C to +275°C. Derating is required for reduced chassis mounting area and for high ambient temperatures. The graph curves shown apply to operation of unmounted resistors. Free air rating.

A = HT5, HT-10
B = HT-25
C = HT-50, all HF Series and HT-75

HN HFN

OMI

ALUMINUM HOUSED RESISTORS NON-INDUCTIVELY WOUND

HN and HFN Models with equivalent electrical and physical specifications to the HT and HF Series are also available with non-inductive windings. To order HT, non-inductively wound, specify "HN." To order HF, non-inductively wound, specify "HFN" instead of the basic HT and HF models. **NOTE:** The following conditions apply to non-inductive types as compared to HT or HF:

1. **Maximum resistance values must be divided by 2.**
2. **Maximum working voltage must be multiplied by .707.**
3. **Maximum weights may slightly exceed those shown above.**

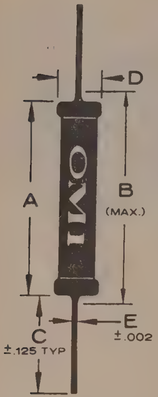
F SERIES

OMI

SILICONE COATED RESISTORS
AXIAL LEADS; BERYLIUM OXIDE CORE

The OMI F Series resistors—at ratings from 1 to 15 watts—offer greatly increased power ratings over conventional resistors of equivalent size. All resistors in the F Series are manufactured in accordance with MIL. Specs. and are available in ten basic physical sizes with resistance ranges from 0.1 ohm to 250K ohms. Resistance tolerances from 0.05% to 5% (1%, standard) and temperature coefficient of resistance from 2PPM up (20PPM, standard).



OMI TYPE	MIL TYPE	OMI WATTAGE RATING		RESISTANCE RANGE		MAX. WORKING VOLTAGE*		Max. Weight Grams	PHYSICAL DIMENSIONS

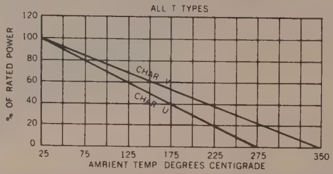
* Maximum working voltage determined at .0008 dia. wire.

SPECIAL FEATURES All features of the conventional precision power resistors, plus the beryllium oxide core for optimum heat dissipation, allow reduction of physical size of resistor while maintaining equivalent power ratings of conventional types.



DERATING
Applicable to both F and T Series

Both OMI, T and F Series resistors have an operating temperature range of −55°C to 275°C (characteristic U) or to 350°C (characteristic V). Derating is required for high ambient temperatures in accordance with the curve shown at left.

OMTRONICS MANUFACTURING, INC. • 2406 LEAVENWORTH STREET, OMAHA, NEBRASKA 68105 • (402) 348-9500

N
FN

OMI

NON-INDUCTIVE TYPE RESISTORS
AXIAL OR RADIAL LEAD AVAILABLE

OMI Models of equivalent physical and electrical specifications are available with non-inductive windings. They are identified by the letter "N"; to order non-inductively wound T Series, specify "N"; to order non-inductively wound F Series, specify "FN."

NOTE: The following conditions apply to specifications applicable to the non-inductively wound types, as compared to the basic T or F types.

1. **Maximum resistance must be divided by 2.**
2. **Maximum working voltage must be multiplied by .707.**
3. **Maximum weights may slightly exceed those shown for the basic T or F types.**

FR SERIES

OMI

MINIATURE POWER RESISTORS
WITH RADIAL LEADS

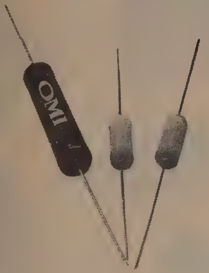
As in the OMI, TR Series, models of equivalent electrical, mechanical, power rating and derating specifications are available in FR3, FR5, FR5A, FR5C, FR6, FR10, FR12, and FR15 dimensions. These models are also available non-inductively wound and identified as the FNR Series.

BW SERIES

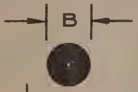
OMI

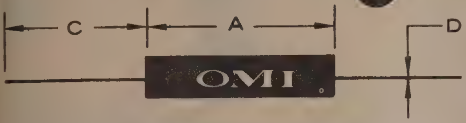
COMMERCIAL RESISTORS

AXIAL LEAD POWER WIREWOUND RESISTORS



The OMI BW Series of resistors are especially adaptable to industrial applications that require a high performance at low cost. They feature a complete welded construction with a high power to size ratio and long term stability for resistance and T.C.





OMI TYPE	BW-2A	BW-2C	BW-3	BW-5	BW-7	BW-10
Power Rating						
275°C	3.0	2.5	4.0	5.0	7.0	10.0
300°C	3.75	3.00	5.50	6.00	8.00	11.00
Resistance Range Available	.1 to 7K	.1 to 10K	.1 to 15K	.1 to 25K	.1 to 50K	.1 to 100K
Max. Weight (Grams)	.7	1.6	2.4	4.4	5.2	9.3
Dimensions in Inches						
A ± .062	.560	.500	.625	.875	1.185	1.780
B ± .032	.187	.218	.250	.312	.312	.375
C ± .125	1.500	2.000	2.000	2.000	2.000	2.000
D ± .001	.032	.040	.040	.040	.040	.040

Tolerance: Standard ±5% 1 ohm and over, 10% below 1 ohm.
T.C. of Resistance ±50 PPM/°C
Lead Material: Tinned Copperweld Standard

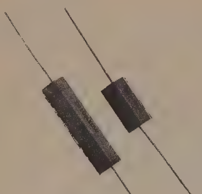
Ordering Information: When ordering, specify OMI Type, Resistance Value and Resistance Tolerance.

CA SERIES

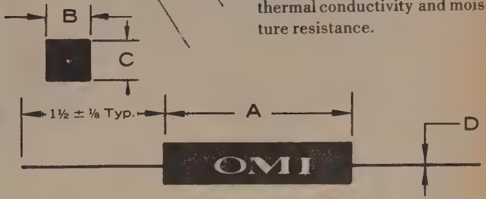
OMI

INDUSTRIAL RESISTORS

AXIAL LEAD POWER WIREWOUND RESISTORS



OMI CA-type resistors are wound on a high quality, fiberglass cord, and axial leads are securely fastened to resistor elements. These resistors are then potted into a ceramic case with a high temperature inorganic fireproof compound. This construction offers high thermal conductivity and moisture resistance.



OMI Type	CA-2	CA-3	CA-5	CA-7	CA-10
Wattage Rating at 25°C	2	3	5	7	10
Resistance Range Available	.2 to 2K	.2 to 7K	.2 to 8K	.5 to 15K	.5 to 25K
Dimensions In Inches					
A ± 1/32	11/16	7/8	7/8	1 25/64	1 7/8
B ± 1/32	1/4	5/16	3/8	3/8	3/8
C ± 1/32	1/4	5/16	11/32	11/32	11/32
D ± .001	.032	.036	.036	.036	.036

Tolerance: ±10% Standard; ±5% available above 10 ohms
Operating Temperature: −55°C to 275°C
Temperature Coefficient of Resistance:
Below 1 ohm 0 ± 400 PPM
Above 1 ohm 0 ± 200 PPM
Terminal Strength: 5 lbs. minimum

Ordering Information:
When ordering, specify OMI Type, Resistance Value and Resistance Tolerance.

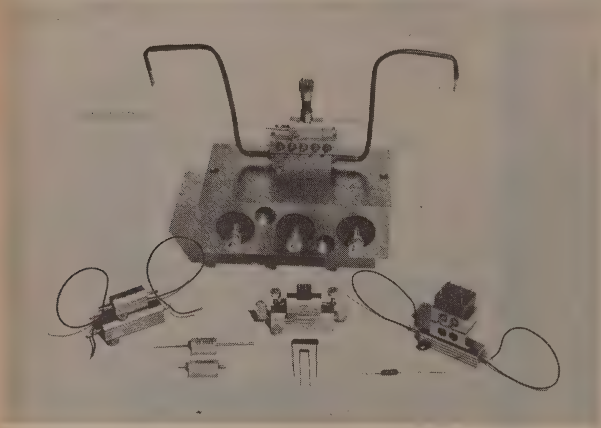
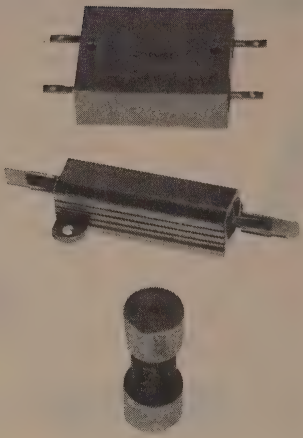
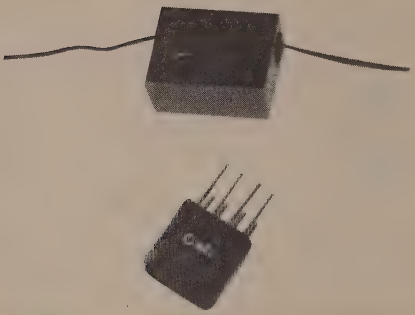
SPECIAL DESIGN

OMI

HEAT SINK RESISTORS







OMI cannot show examples of our capabilities in the field of creative heat sink development, because those are limited only by your need and our imagination. We *have* shown a few examples of special design work manufactured for specific client requirements. Our tooling and engineering experience, coupled with our production facilities allows us to invite discussion about your own peculiar requirements.

Give us your parameters and let us go to work. High power capabilities? 4-Wire low value resistors? Special combination of characteristics? High temperature or high pressure demands?

You state the form, the size, the physical forces at work and we'll apply our advanced state of the art to your product.

OMTRONICS MANUFACTURING, INC. • 2406 LEAVENWORTH STREET, OMAHA, NEBRASKA 68105 • (402) 348-9500

RCL Electronics

SERIES T

silicone coated axial power wire-wound resistors

General Specifications Available:

☐ **Standard Temperature Coefficient:**
Standard T.C.:
±20 PPM/°C. 500Ω up ±30 PPM/°C 10Ω to 499Ω
±50 PPM/°C 1Ω to 9.9Ω ±90 PPM/°C below 1Ω
Lower ohmic values require higher T.C.'s, consult factory for information on specific applications.
Consult factory for lower temperature coefficient requirements.

☐ **Tolerance:** ±1.0% is standard. Closer tolerances available.

☐ **Wattage Range:** ½ watts to 14 watts.

☐ **Standard Resistance Values:** From 0.1 ohms to maximum values as stated in table. For values below 0.1 ohms consult factory.

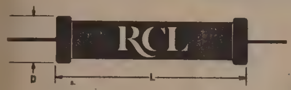
☐ **Coating:** RCL's proprietary silicone coating withstands moisture, salt water immersion, and cleansing solutions. It will withstand continuous operation up to 400°C.

☐ **Leads:** Tinned copperweld is standard.

☐ **Dielectric Strength:** 500 VAC for T-½A through T-1C, 1000 VAC for all others.

☐ **Insulation Resistance:** 5000 Megohms minimum at 100 volts D.C.

☐ **Wide Temperature Range:** From −65°C to +275°C (Characteristic U) or +350° (Characteristic V).



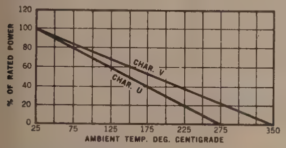
POWER RATINGS:

The RCL "T" Series has two power ratings, depending on operating temperature and stability requirements:

CHARACTERISTIC U: 275°C maximum hot-spot temperature.

CHARACTERISTIC V: 350°C maximum hot-spot temperature.

DERATING:
RCL Series "T" resistors have an operating temperature range of −65°C to +275°C (Characteristic U), or to +350°C (Characteristic V).



Ultra-fast delivery for prototypes and initial production needs.

Lead length 1¼" (32mm) Minimum.

NON-INDUCTIVE WINDING AVAILABLE FOR SERIES "T" OR "B"

☐ For non-inductive winding add prefix "N".
1. Divide maximum resistance values by two.
2. Multiply maximum working voltage by .707.
3. Where possible, specify maximum inductance or capacitance allowable at a specific frequency.

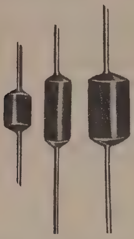
RCL Electronics

low-cost wire-wound resistors for commercial/industrial applications



RCL Commercial line — low cost, precision wire wound resistors for test equipment, instruments, industrial controls, communications equipment. All the benefits of wire wounds — low T.C., high stability, close tolerance.

- Price competitive with comparable metal film resistors
- Standard T.C. = ±10 PPM/°C
- Special T.C.'s available on request
- High temperature epoxy coating provides moisture protection
- Lead Length: 1½″(38.1mm) minimum
- Wattage rating at 60°C ambient; derated to zero at 105°C
- Low noise
- Molded-in leads for structural strength
- Tolerance Available: ±1.%, 0.5%
- Non-inductive winding available on special order

Style Number	Wattage* Rating	Min. Res.	Max. Res.	Bobbin Diameter ±.031	Bobbin Length ±.0625	Lead Diam. AWG

E-30	.5	0.1 ohm	25K	.25	.75	#20

subminiature wire-wound resistors

These extremely small, encapsulated resistors meet and exceed the specifications of MIL-R-93. Special RCL techniques also allow the production of custom sizes at minimal cost to the customer.

Tolerances available: from ±1.0% to ±0.001%.

Temperature coefficient: Standard is ±10 PPM/°C.

Temperature coefficients available as low as ±2 PPM/°C.

FEATURES

- Tolerance: ±1% standard. Available to ±.05%.
- Standard TC:
  ±20 PPM/°C. 500Ω up
  ±30 PPM/°C. 10Ω to 499Ω
  ±50 PPM/°C. 1Ω to 9.9Ω
  ±90 PPM/°C. below 1Ω
- All popular types, 5 watts through 50 watts
- Molded and welded construction
- Screw mounts on chassis
- Exceptionally high stability at all conventional power ratings
- Utilizes heat-sink effect of chassis
- Clearly marked on top surface of housing for ease of identification after mounting
- Exceeds MIL-R-18546
- Complete protection against environment

NON INDUCTIVE STYLES: (Series "AL" and "ALB") The same physical and electrical specifications are available with non-inductive winding. They are identified by adding the letter N after the AL identification.

MATERIAL

Core: Steatite, or Alumina Ceramic

Resistance Wire: Nichrome wire (800Ω/CMF) is standard; other alloys used when required.

End Caps: Stainless steel.

Sealant: Molded construction.

Housing: Anodized Aluminum.

Terminals: Tinned copperweld.

Flame Retardant Construction: Available on special order.

POWER RATING

Both AL-100 and AL-250 Series ratings based on the following requirements:

A. 275°C maximum internal hotspot temperature.

B. 1% maximum △R in 1000 hour load life.

C. Proper heat sink: 12"x12"x.125 Aluminum Panel.

D. Derating:

1. Operating temperature range of −55°C to +275°C.
2. Derating is required for reduced chassis mounting area and for high ambient temperatures.

APPLICABLE MIL-SPECIFICATIONS

MIL-R-18546: Meets or exceeds military specifications covering aluminum housed, chassis-mounted resistors.

ELECTRICAL SPECIFICATIONS

Tolerance: ±1.0% is standard. Available to ±.05%. Closer tolerances may necessitate lowering maximum resistance. Consult RCL for specifics.

Standard T.C.: ±20 PPM/°C. 500Ω up
±30 PPM/°C. 10Ω to 499Ω
±50 PPM/°C 1Ω to 9.9Ω
±90 PPM/°C. below 1Ω

Lower ohmic values require higher T.C.'s. Consult factory for information on specific applications.

Dielectric Strength: 5500 VAC on AL-100 and AL-250.

Insulation Resistance: 10,000 megohms min. dry.

NON INDUCTIVE STYLES

The same physical and electrical specifications are available with non-inductive winding. They are identified by adding the letter N after the AL identification.

RCL Electronics

special temperature coefficient wire wound resistors

- Applications include transistor circuits, zener diode temperature compensation, temperature measuring devices.
- Available in a range of temperature coefficients from −50 ppm/°C. to +6,000 ppm/°C.
- Values range from 10 ohms to 5 megohms.
- All available with axial or printed circuit leads.
- Available in all physical sizes.
- All meet applicable paragraphs of Mil-R-93D

Special Temperature Coefficients available (see table below)

COLD RANGE	HEAT RANGE	R FACTOR
−55°C to +25°C	+25°C to +105°C	Multiply Max. R by
−50 ±20	**−50 ±20**	1.00
−30 ±10	**−30 ±10**	1.00
±3	**±3**	1.00
±5	**±5**	1.00
±10	**±10**	1.00
±20	**±20**	1.00
+95 ±20	**+85 ±20**	.80
+110 ±10	**+100 ±10**	.80
+120 ±10	**+110 ±10**	.75
+150 ±30	**+150 ±30**	.85
+180 ±20	**+180 ±20**	.80
+280 ±30	**+280 ±30**	.25
+380 ±40	**+400 ±40**	.70
+700 ±200	**+650 ±200**	.60
+850 ±80	**+850 ±80**	.60
+1100 ±100	**+1050 ±100**	.50
+1250 ±100	**+1150 ±100**	.50
+1500 ±200	**+1450 ±200**	.55
+2600 ±200	**+2550 ±200**	.50
+3400 ±300	**+3600 ±300**	.36
+4000 ±400	**+4500 ±400**	.10
+5000 ±300	**+6000 ±300**	.05

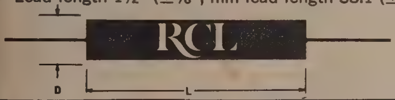
Above T.C.'s refer to .001 (25.4μ) minimum wire diameter. Some alloys available in sizes as low as .0007 (18μ).

RCL high positive TC resistors

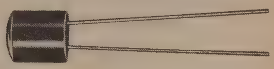
RCL Type #	Competitive 'SENSISTOR' Type #	Diam. ±.015	Length ±.015	RCL Resistance Range	'SENSISTOR' Resistance Range	Lead Diam. AWG.
8000	TM ⅛	.140	.406	1 Ohm to 10K	10 Ohms to 6K	#22
8001	TM ¼	.200	.585	1 Ohm to 20K	10 Ohms to 10K	#22

RCL has developed its own proprietary special alloy resistance wire which gives the unusually high positive TC of silicon, together with the basic advantages of resistance wire which are:

- Provides temperature compensation.
- Much greater stability for digital and linear integrated circuits.
- Closer resistance tolerances.
- Broader range of resistance values.
- Operating temperature range from −55°C to +150°C.
- Derated to zero watts at 150°C.
- Lead length 1½" (±⅛"; mm lead length 38.1 (±3.2mm).



RCL wire-wound printed circuit resistors



△ All welded construction.

△ All resistor wire terminations are made at the top of the resistor rather than at the bottom.

This does the following:

a. protects the joints from damage when submerged in a solder bath.

b. by placing these joints as far away as possible from the solder bath, the body acts as a heat sink and thus these terminations are given additional protection.

c. this design generally applies to values of 2K and above.

△ Custom designs on special order.

△ Different lead spacing can be furnished on request.

△ Non-inductive winding available.

RCL Type	MIL-R-93D Type	Dia. (±.025)	Length (±.032)	Max. Res. Using .001 (25.4μ)	Max. Res. Using .0006 (15.2μ)	Wattage	Standard Lead Spacing (±.010	Lead Diam. (AWG)

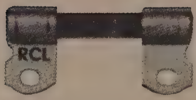
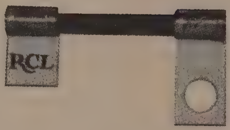
low cost commercial wire-wound resistors



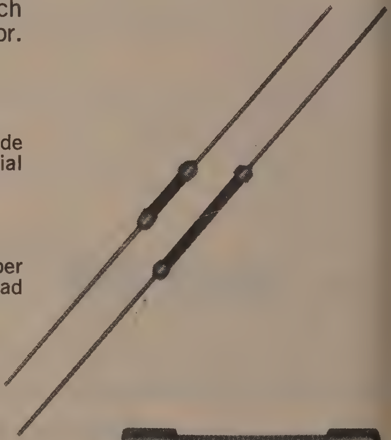


SERIES OWR

RCL Series OWR Resistors are available in a wide range of configurations to meet low-cost, high volume applications in the automotive and appliance fields. A range of terminal styles is available and others can be made to user specifications at a nominal cost. Power ratings are 4.5 watts per inch between mounting centers on the standard OWR, and 6 watts per inch between mounting centers on the hi-wattage OWR Resistor. Shown are some of the Terminal Configurations available.

CONSTRUCTION

This RCL Series has a high quality, premium resistance wire wound on woven fiberglass cores impregnated with a special grade silicone. Available with special smokeproof coating.



ORDERING INFORMATION

When ordering, please specify resistor body length, watts/inch, resistance and tolerance.

Example: A 1½″ unit, 4 watts per inch; 350Ω, ±10% radial lead unit is designated:
OWR-4-350Ω±10%

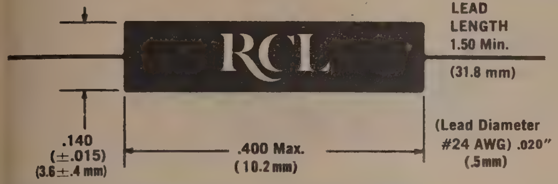
precision wire-wound fuse resistors

NOW . . . a dual-purpose device that performs the functions of acting both as a precision wirewound resistor and a fuse. Precisely controlled characteristics . . . stable, accurate resistance . . . allows precise control of fusing point and time lag.



GENERAL SPECIFICATIONS ON 500 SERIES

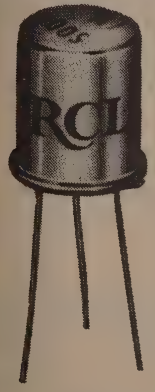
RESISTANCE RANGE: 0.2Ω - 200Ω
RESISTANCE TOLERANCE: 10% STD, 5% AND 2% AVAILABLE
BLOW CHARACTERISTICS: PER TABLE — 2 POINT DEFINITION
STEADY-STATE CONDITIONS: PER TABLE—CURRENT AND POWER RATINGS
OPERATING TEMPERATURE: —55°C TO +150°C
TEMPERATURE COEFFICIENT: ±50 PPM/°C MAX

CONSTRUCTION FEATURES

- SINGLE FUSING ELEMENT — ALL WELDED CONNECTIONS
- CERAMIC SHELL — AIR ENCAPSULATION
- MEETS OR EXCEEDS MIL-R-26 ENVIRONMENTAL CONDITIONS-SPECIFICATIONS
- INTRINSICALLY SAFE — CERAMIC BOBBIN — SINGLE LAYER WOUND

RCL designs and manufactures standard (F500 series) and special fuse-resistors to customer requirements. The fuse resistor acts both as a precision wirewound resistor and as a fusing element with precisely controlled characteristics.

- Affords protection for semiconductor devices
- Reduces the number of discrete components required
- Eliminates fire hazard and circuit board damage due to overheated components
- Eliminates unnecessary blowing due to transient conditions

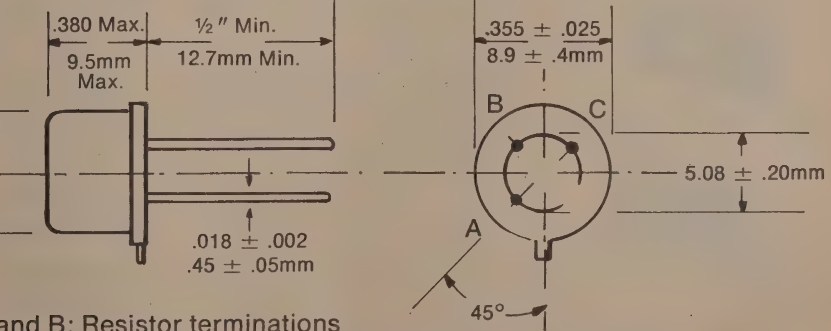


TYPE-T-05R

This new resistor is sealed in a T-05 "Transistor Case" providing hermetically sealed electrostatic and electromagnetic screening. The lead outs are through glass to metal seals.

SPECIFICATIONS

RESISTANCE RANGE: 1Ω to 1 meg. ohm.
STANDARD TOLERANCE: ±1% Available to ±.01%. Consult factory for details.
TEMPERATURE COEFFICIENT: ±10ppm/°C Standard. For special T.C.'s consult factory.
RATING: 150 milliwatts for temperature rise of 20°C. Maximum volts: 250 V.
CLIMATIC: Sealed for operation from −65°C to +125°C.



A and B: Resistor terminations
C: Envelope — electrostatic and electromagnetic shielding

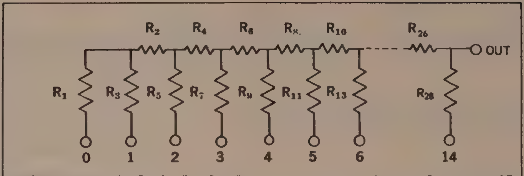
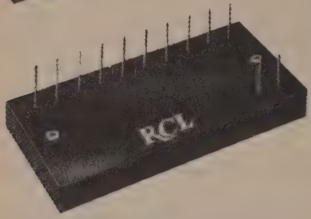
ladder and summing networks

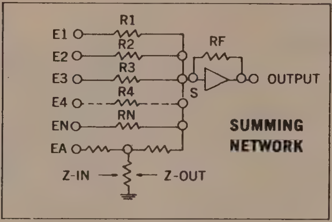


Resistors: $R_1, R_3, R_5, R_7, R_9, R_{11}, R_{13}, R_{15}, R_{17}, R_{19}, R_{21}, R_{23}, R_{25}, R_{27}, R_{28}$; each = 2R

Resistors: $R_2, R_4, R_6, R_8, R_{10}, R_{12}, R_{14}, R_{16}, R_{18}, R_{20}, R_{22}, R_{24}, R_{26}$; each = R

RCL makes available ladder networks in both standard and miniaturized versions





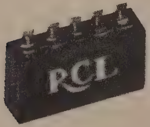
- Maximum total error less than ½ of the smallest word input combinations
- Modular construction
- Interchangeable sub-assemblies

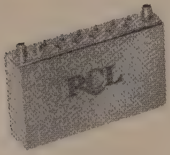
General Specifications Available:

- Ambient operating temperature range . . . −55°C to +125°C
- Error . . . Under .50 of the least significant bit for every input combination
- Resistance Values: 500Ω to 100K
- Output accuracy to ±.01% and ±2 PPM/°C
- Up to 14 bits available
- Wire Wound precision resistors of matched characteristics result in high stability

---

precision resistance networks





RCL designs, develops and produces packaged resistance networks to individual customer requirements.
A high degree of sophisticated packaging plus miniaturization techniques are available from RCL's network engineering specialists. Typical custom designed networks are shown here.

General Specifications Available:

- Absolute resistor tolerances to ±.002%
- Ratio tolerances to ±.001%
- Temperature coefficient match and tracking between resistors within ±1 PPM/°C from −0°C to +85°C
- Long term stability of .001% the first year and .002% over a three year period
- Low reactance and rise times as low as .02 microseconds
- AC resistance match at frequency determined by user
- In AC converter networks, capacitance can be matched to 0.01 MMFD with a shielded network.

If you have a network problem, send us your complete specifications for a prompt and detailed proposal.

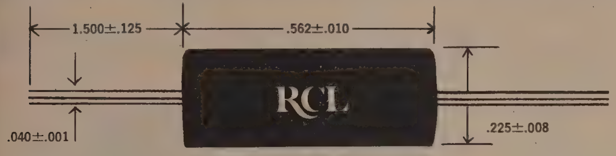
low cost 2 watt molded wire-wound resistors



TYPE BWR

A general purpose, extremely economical wire wound resistor. Type BWR covers three different wattage requirements in one size resistor.

BWR resistors offer wire wound stability, negligible noise and no catastrophic failures for 2, 1 and ½ watt applications. Significant cost savings may be obtained over Fixed Composition Resistors in the categories of 1 watt 5% tolerance, 2 watt 5% and 10% tolerances.

PERFORMANCE CHARACTERISTICS

REQUIREMENT	TYPICAL BWR R LESS THAN	MAXIMUM BWR △R
Temperature Coefficient 0.1Ω - 0.16Ω	+0.08%/°C	+0.1%/°C
0.10Ω - 0.62Ω	+0.06%/°C	+0.08%/°C
0.68Ω - 2400Ω	±0.02%/°C	±0.04%/°C
Low Temperature Operation	±1.5%	±3%
Temperature Cycling (−55°C to +125°C)	±1.5%	±5%
Moisture Resistance	±3%	±5%
Short Time Overload (8 Watts)	±1.5%	±4%
Load Life	±5%	±10%
Terminal Strength	±1%	±2%
Resistance to Soldering Heat	±2%	±4%
Shock	±0.5%	±2%
High Frequency Vibration	±1%	±2%

"Typical △R less than" is defined as the maximum △R to be expected in 95% of the population of a distribution.

NOTES:

1. Because of inaccuracies common in measuring low resistance values, an allowance of 0.01Ω should be added to the %△R limits.
2. Test conditions are as specified in MIL-R-11 and MIL-STD-202 except where shown in parenthesis.
